

# SRC and EMC Experimental Overview and Simulation Studies

Florian Hauenstein,  
Old Dominion University  
CFNS & RBRC Workshop  
09/24/19

# Deep Inelastic Scattering (DIS)

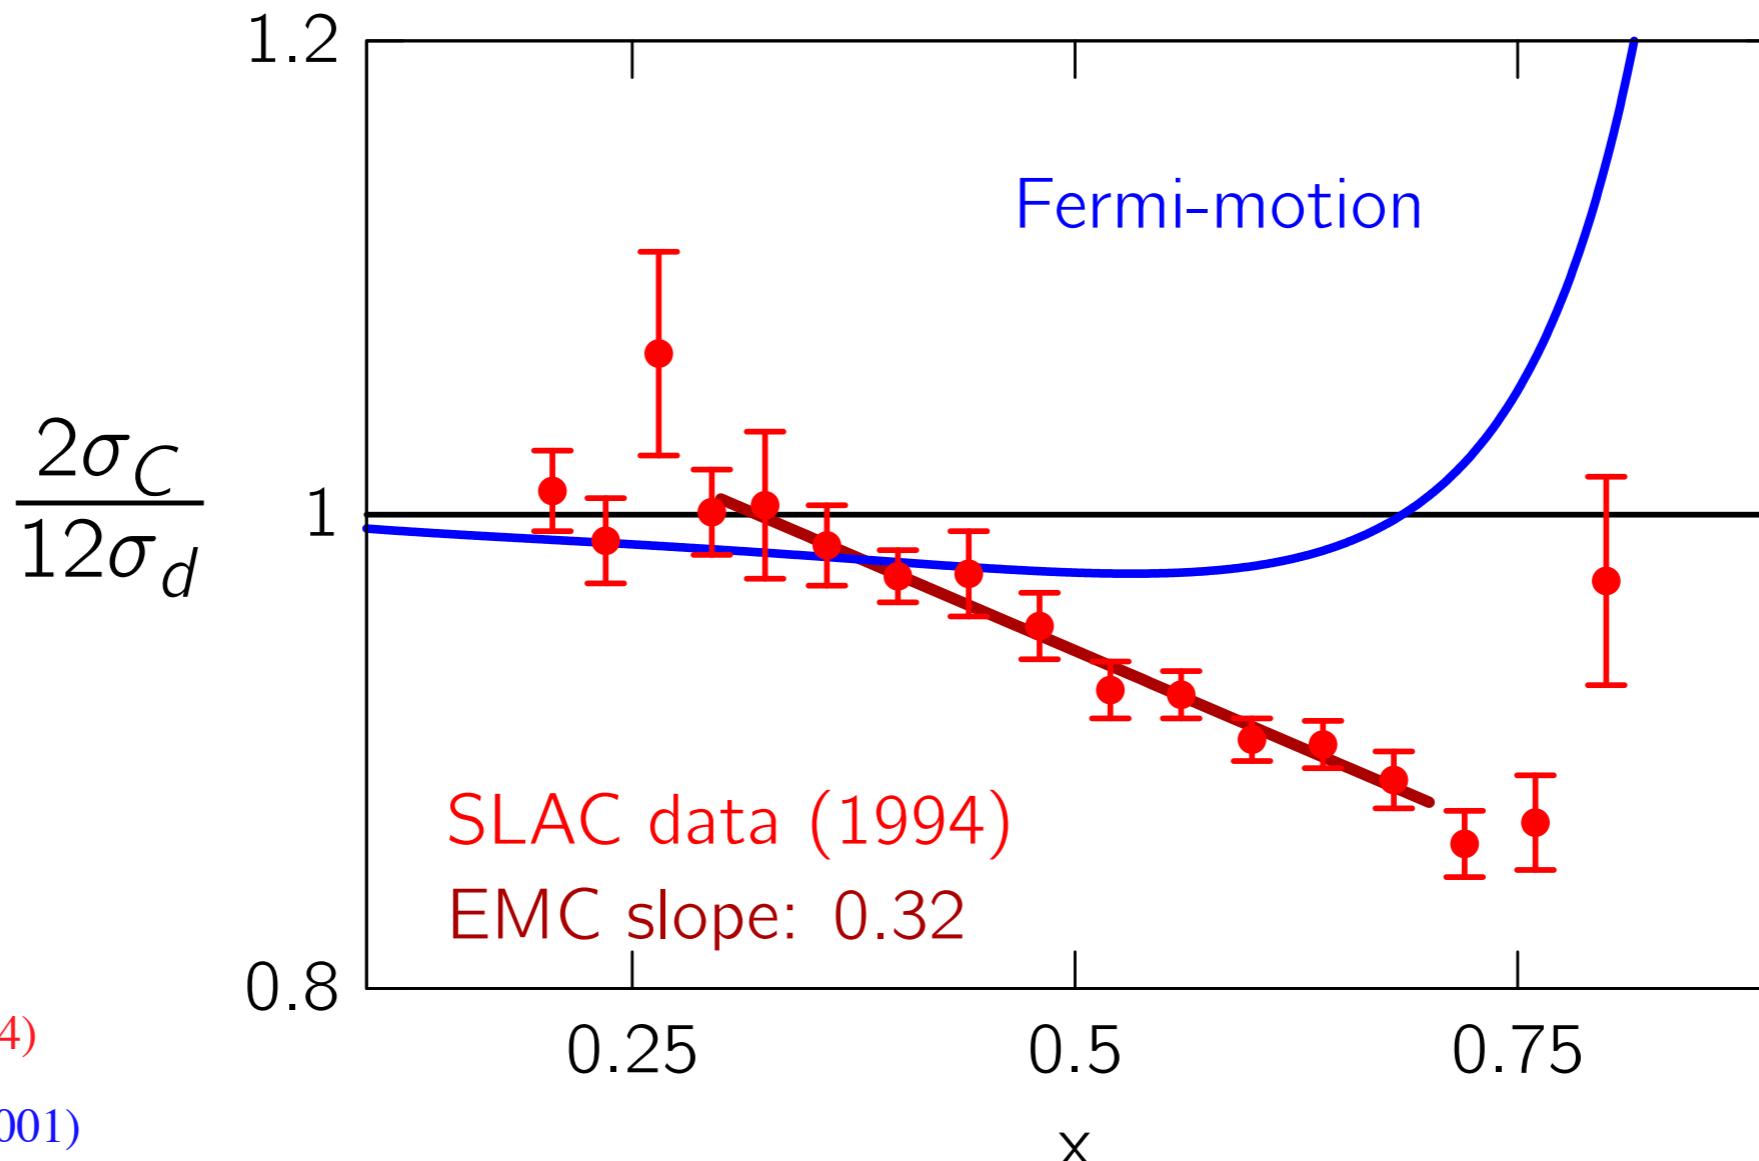

$$x_B = \frac{Q^2}{2m\omega}$$

$$Q^2 = 4E_0 E \sin^2\left(\frac{\theta}{2}\right)$$

$$\omega = E - E'$$

$$\frac{d\sigma}{d\Omega dE'} = \left(\frac{2\alpha E'}{Q^2}\right)^2 \times \left(\frac{1}{\nu} F_2 + \frac{2}{m} F_1 \tan^2 \frac{\theta}{2}\right)$$

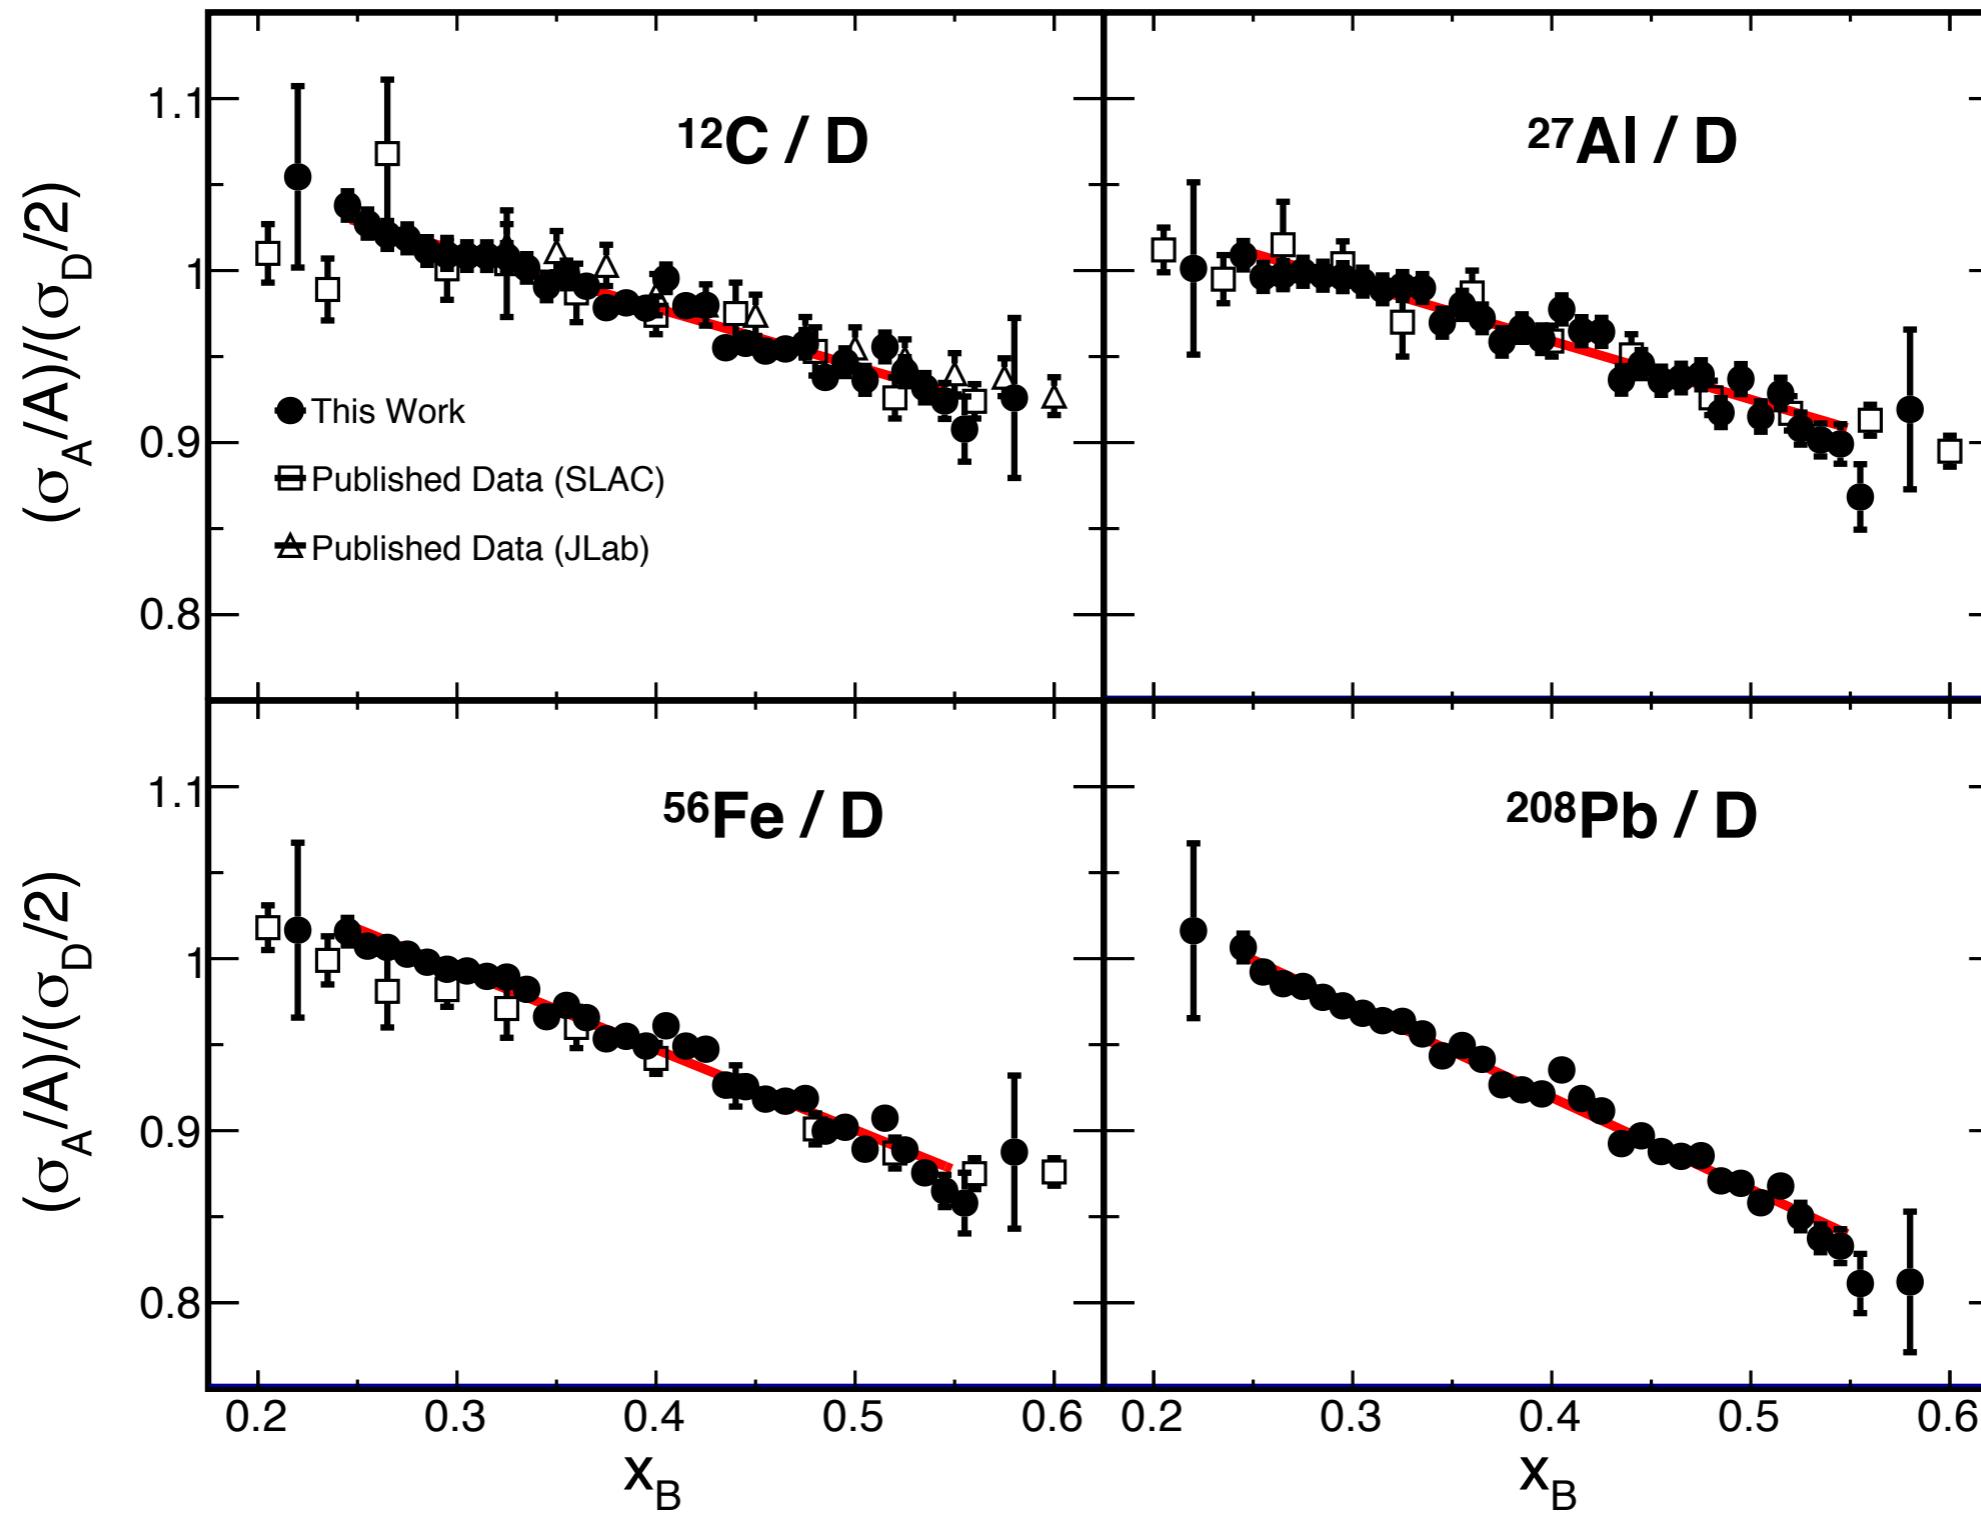

# The EMC Effect in DIS Scattering

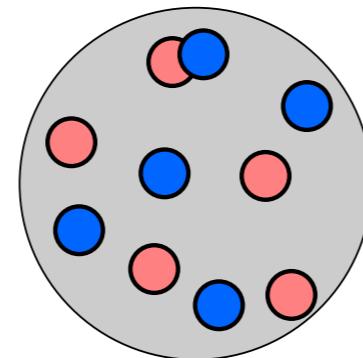

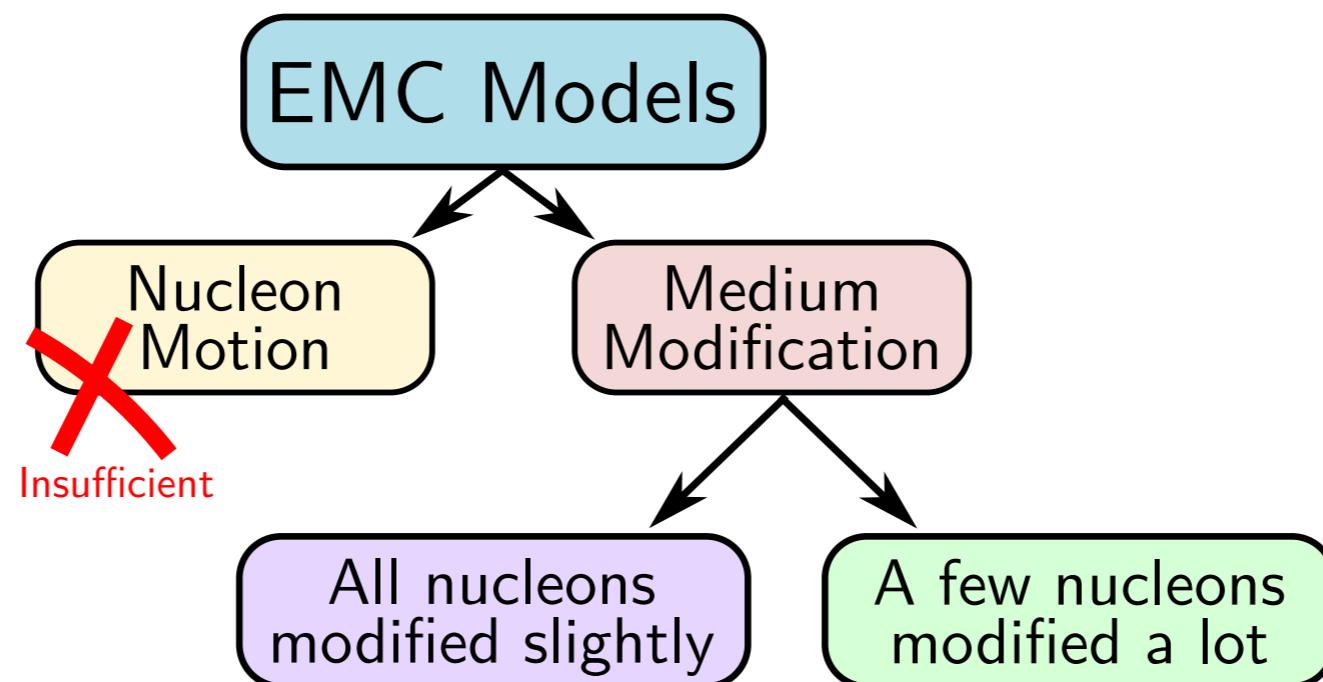

Quark distributions ( $F_2$ ) in nucleons bound in nuclei different to distributions in free nucleons, here:  $F_2^C \neq 6 * F_2^d$

# EMC Effect in Different Nuclei

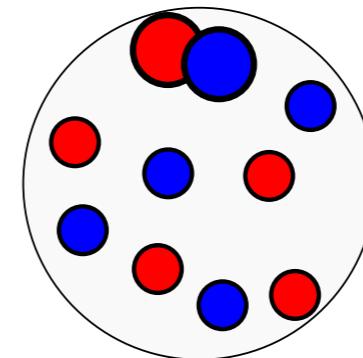

B. Schmookler et al. (CLAS collaboration), Nature 566, 354 (2019)

# EMC Models

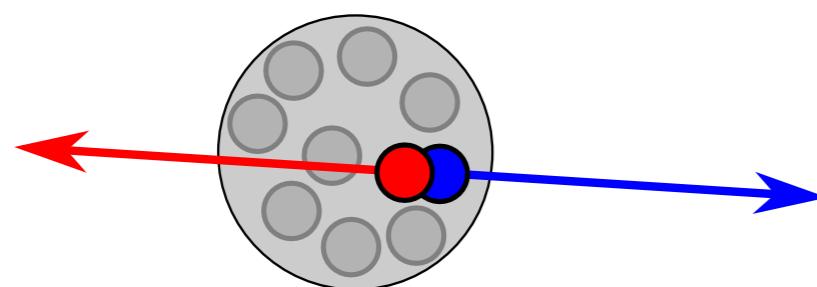

Mean Field  
Modifications

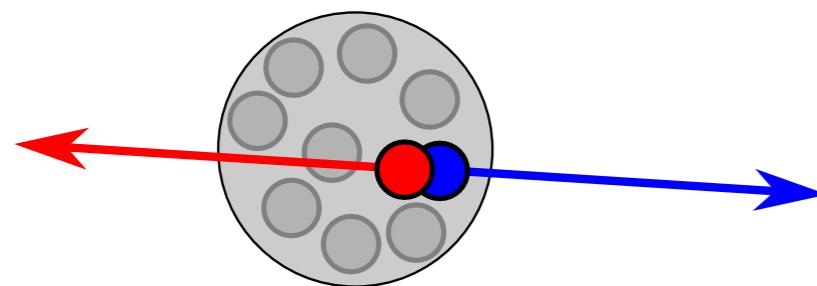

Short Range Correlations  
(SRC)

# Short Range Correlations

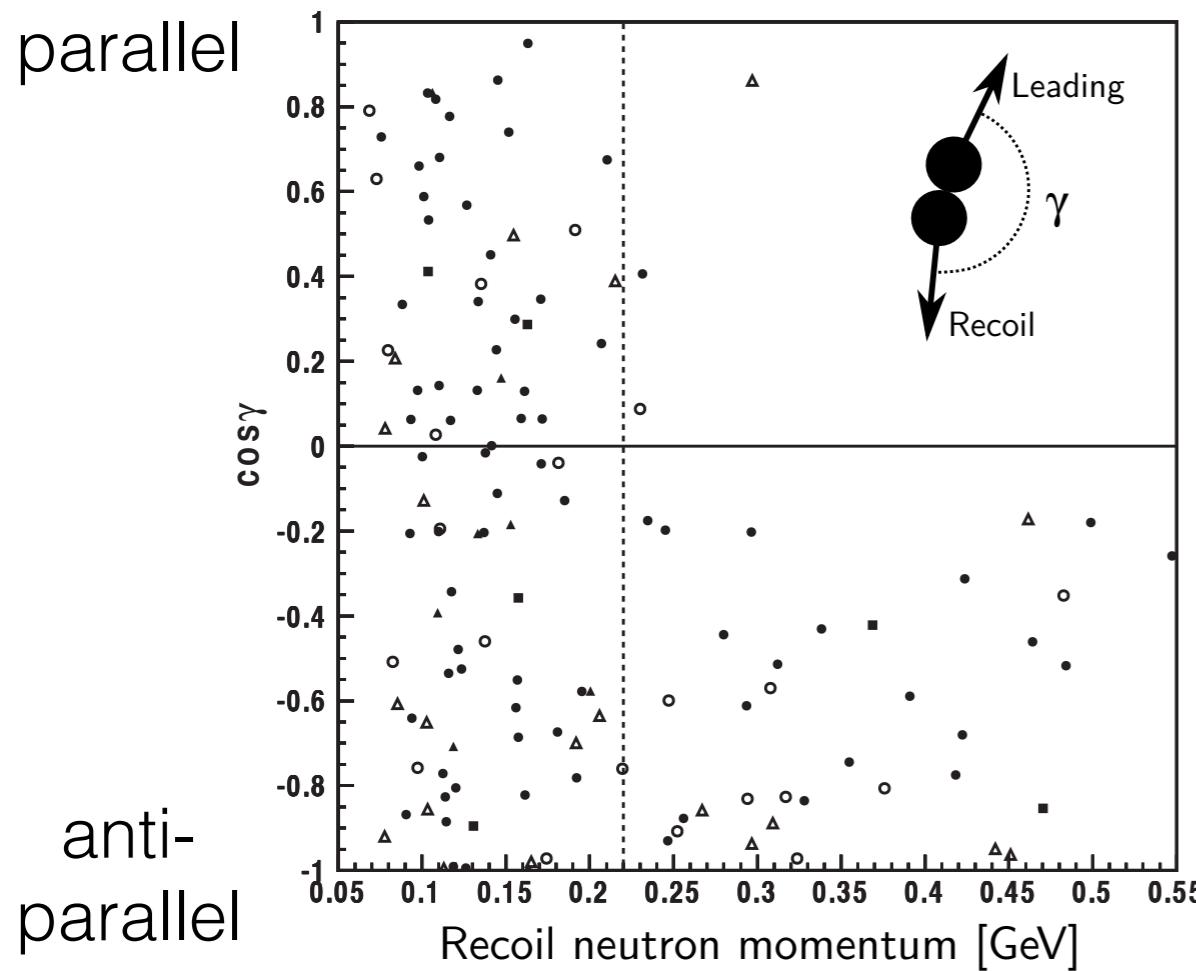

- NN pair with
  - **large relative momentum**  
 $> 300 \text{ MeV/c}$
  - **small c.m momentum**
- ~20% of nucleons in nuclei

# Short Range Correlations

- NN pair with
  - **large relative momentum**  
 $> 300 \text{ MeV/c}$
  - **small c.m momentum**
- ~20% of nucleons in nuclei

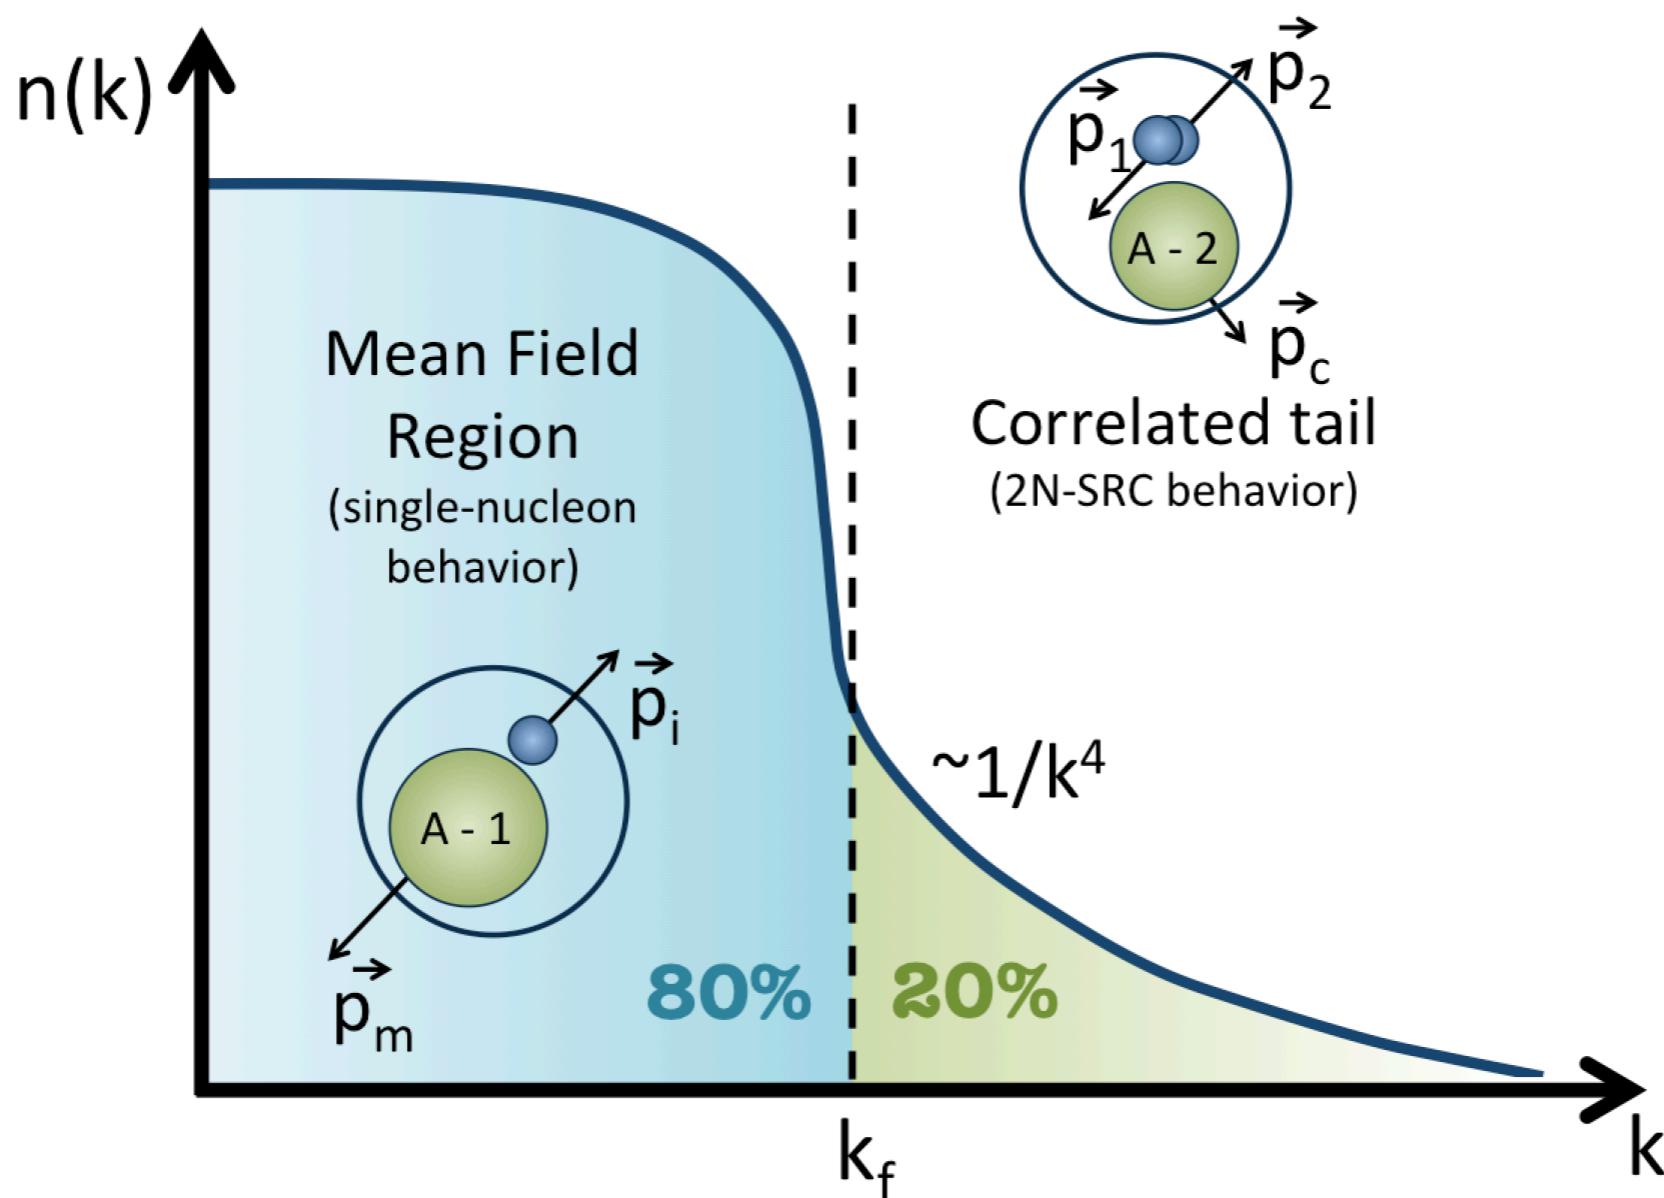

E. Piasetzky et al., PRL 97, 162504 (2006)

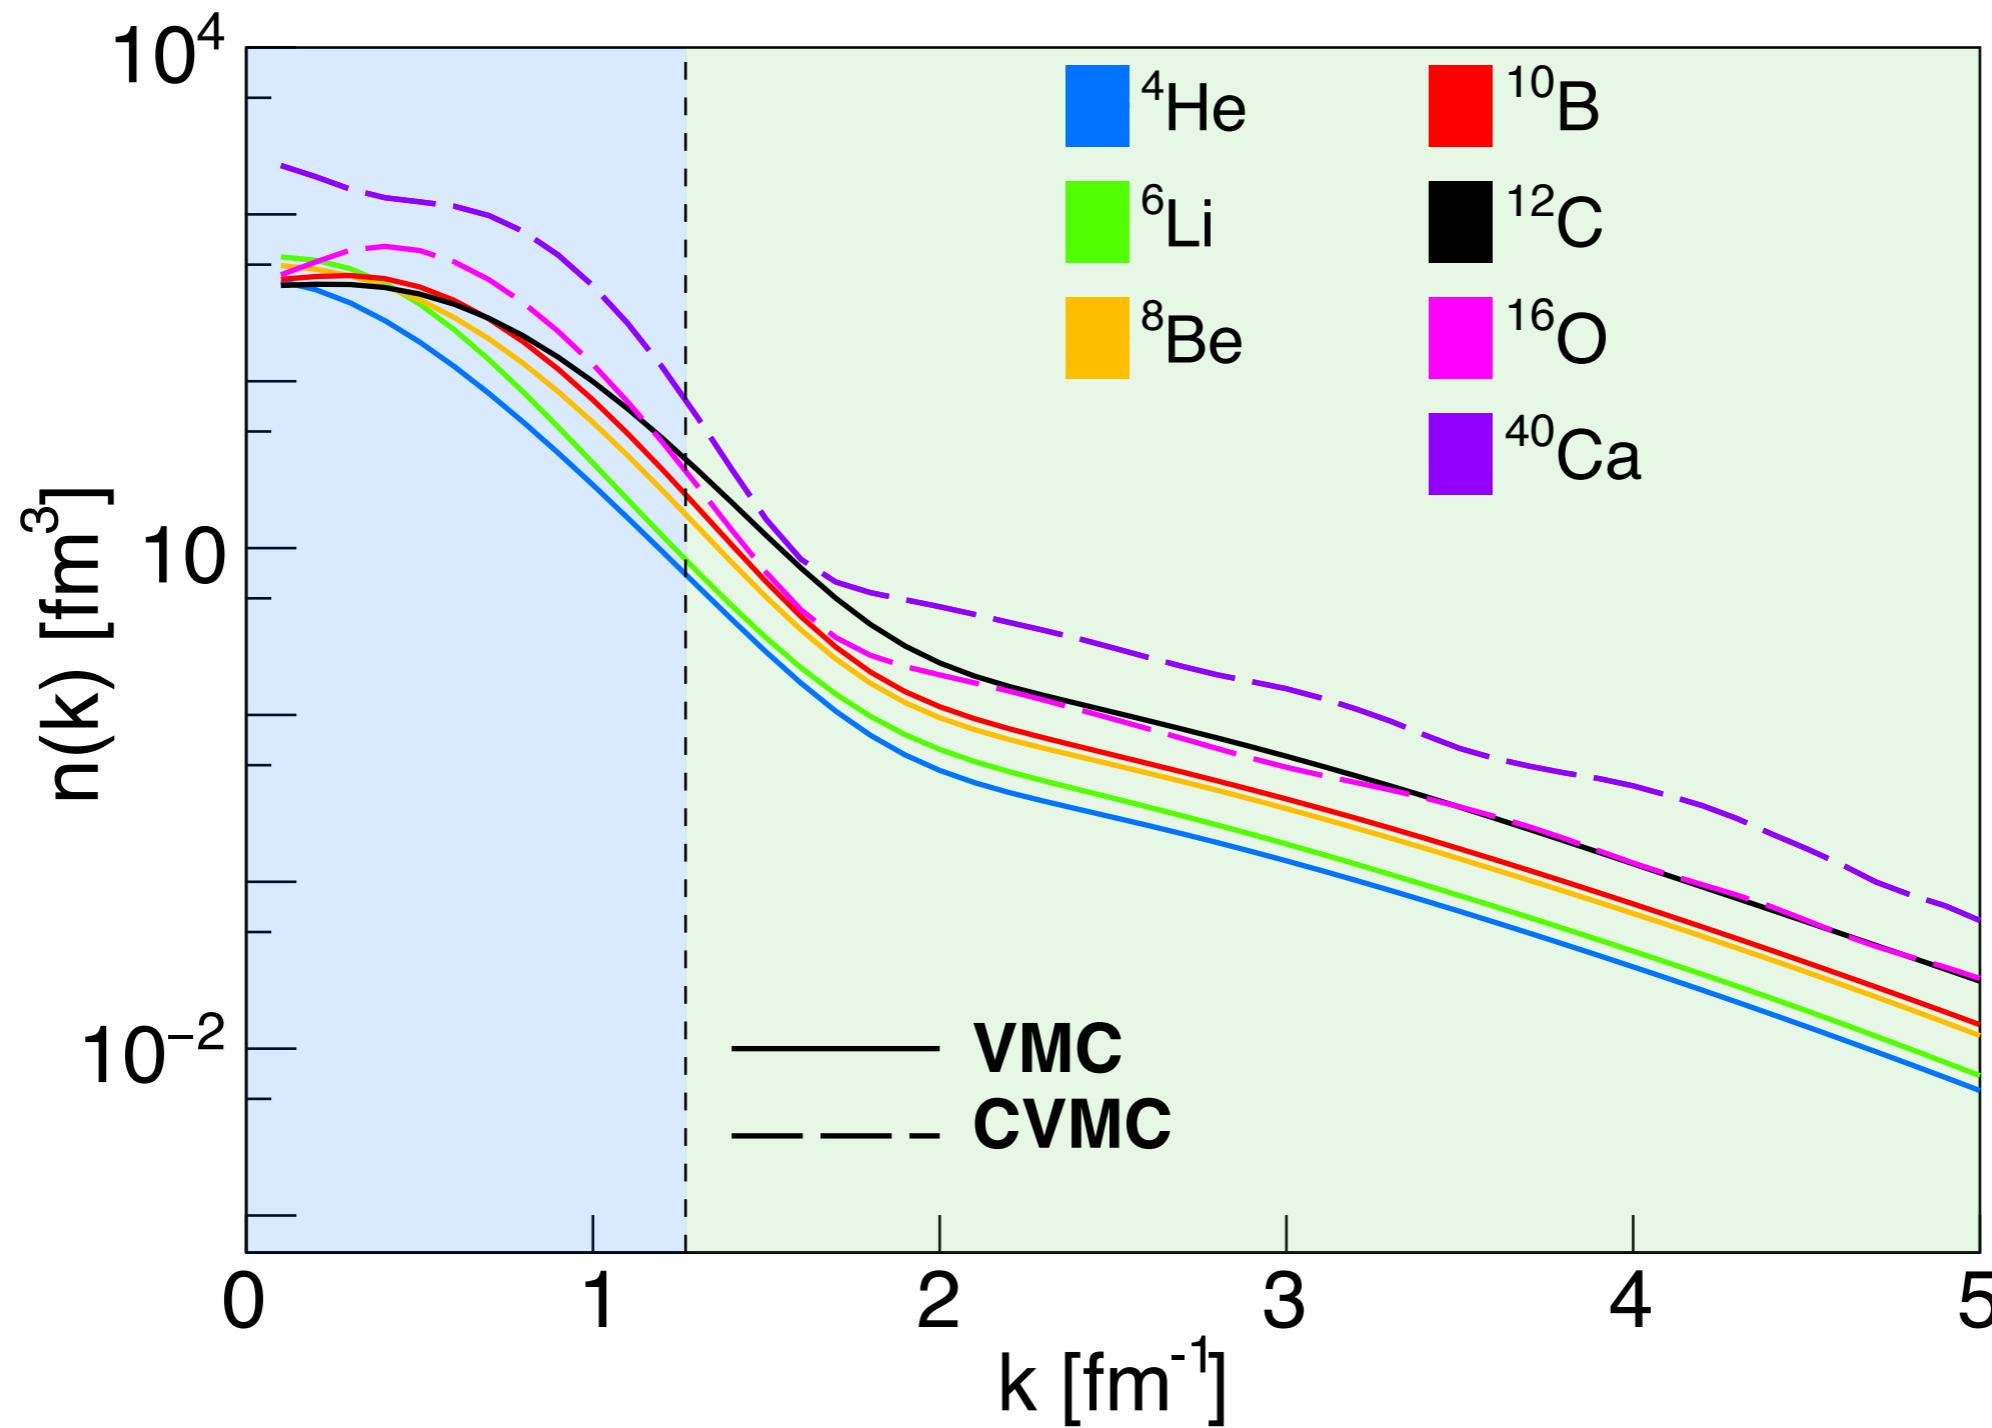

p scattering from Carbon

- always a correlated partner
- Anti-parallel momentum

# Nucleon Momentum Distribution

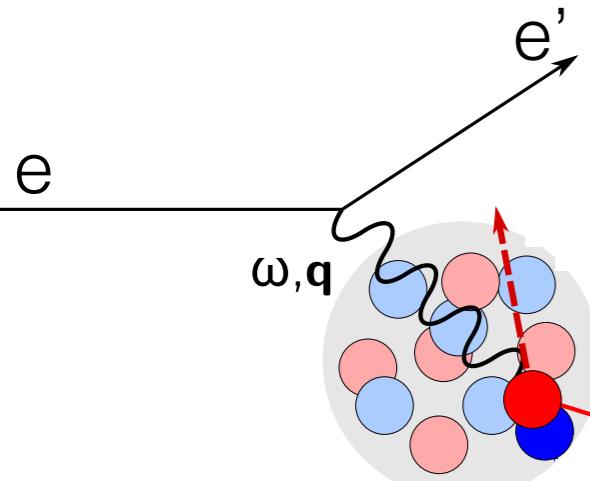

# Universality of High Momentum Tail

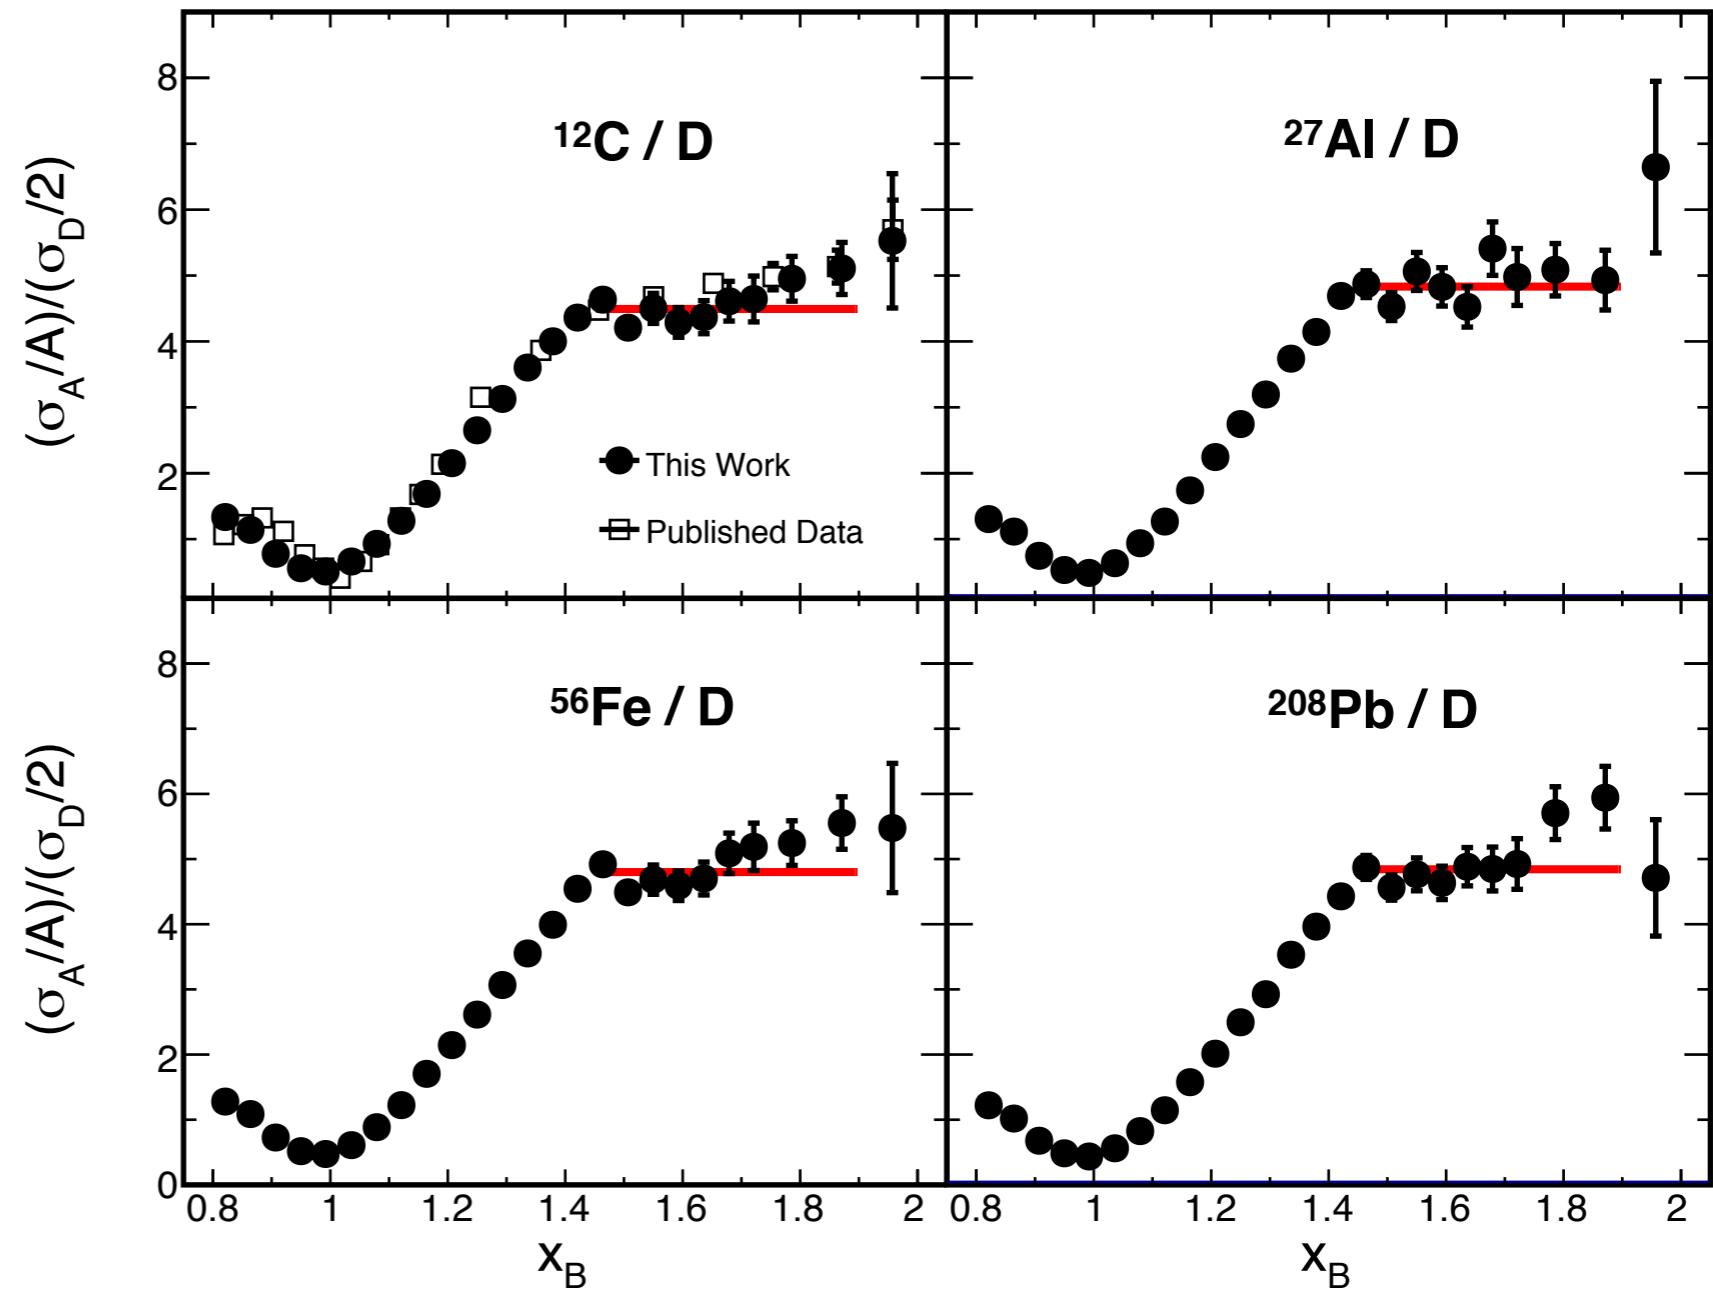

B. Wiringa, <https://www.phy.anl.gov/theory/research/QMCresults.html>

# SRCs in Inclusive Scattering

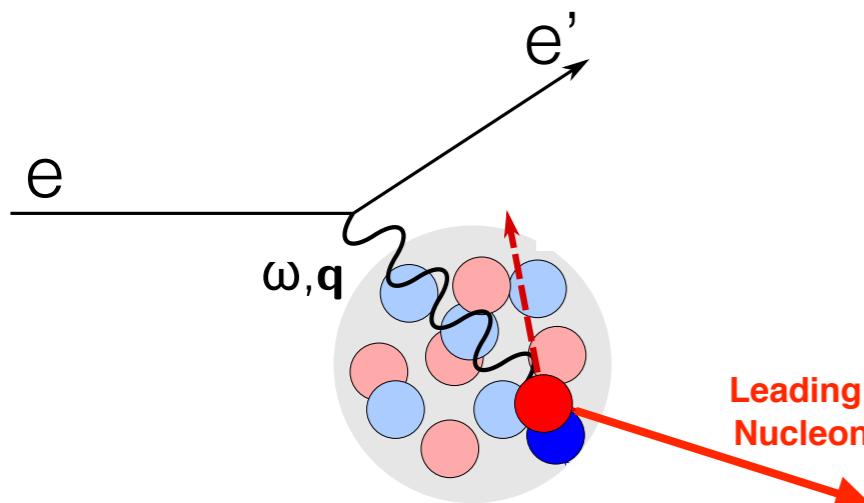

B. Schmookler et al. (CLAS collaboration), Nature 566, 354 (2019)

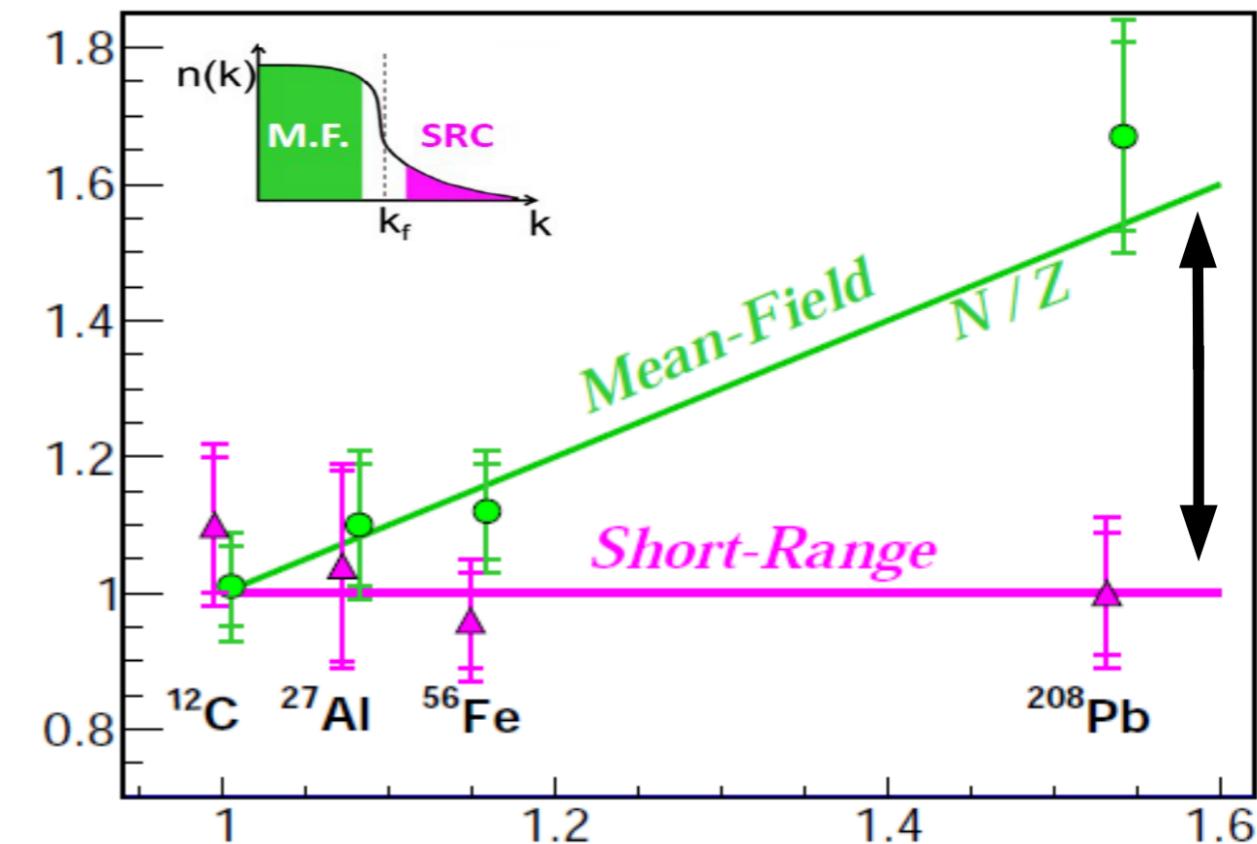

- Quasi-Elastic scattering
- Plateaus due to SRCs

# SRCs in Exclusive Scattering

Duer et al. (CLAS collaboration), Nature 560, 617 (2018)

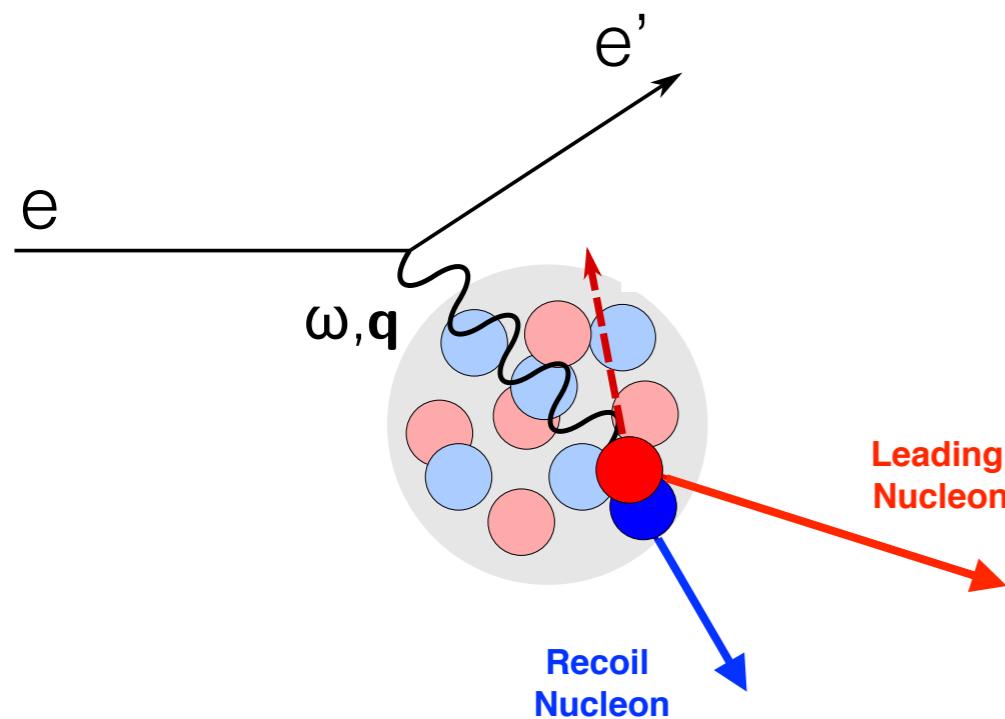

$$\frac{\sigma_A(e, e'n)/\sigma_{en}}{\sigma_A(e, e'p)/\sigma_{ep}}$$

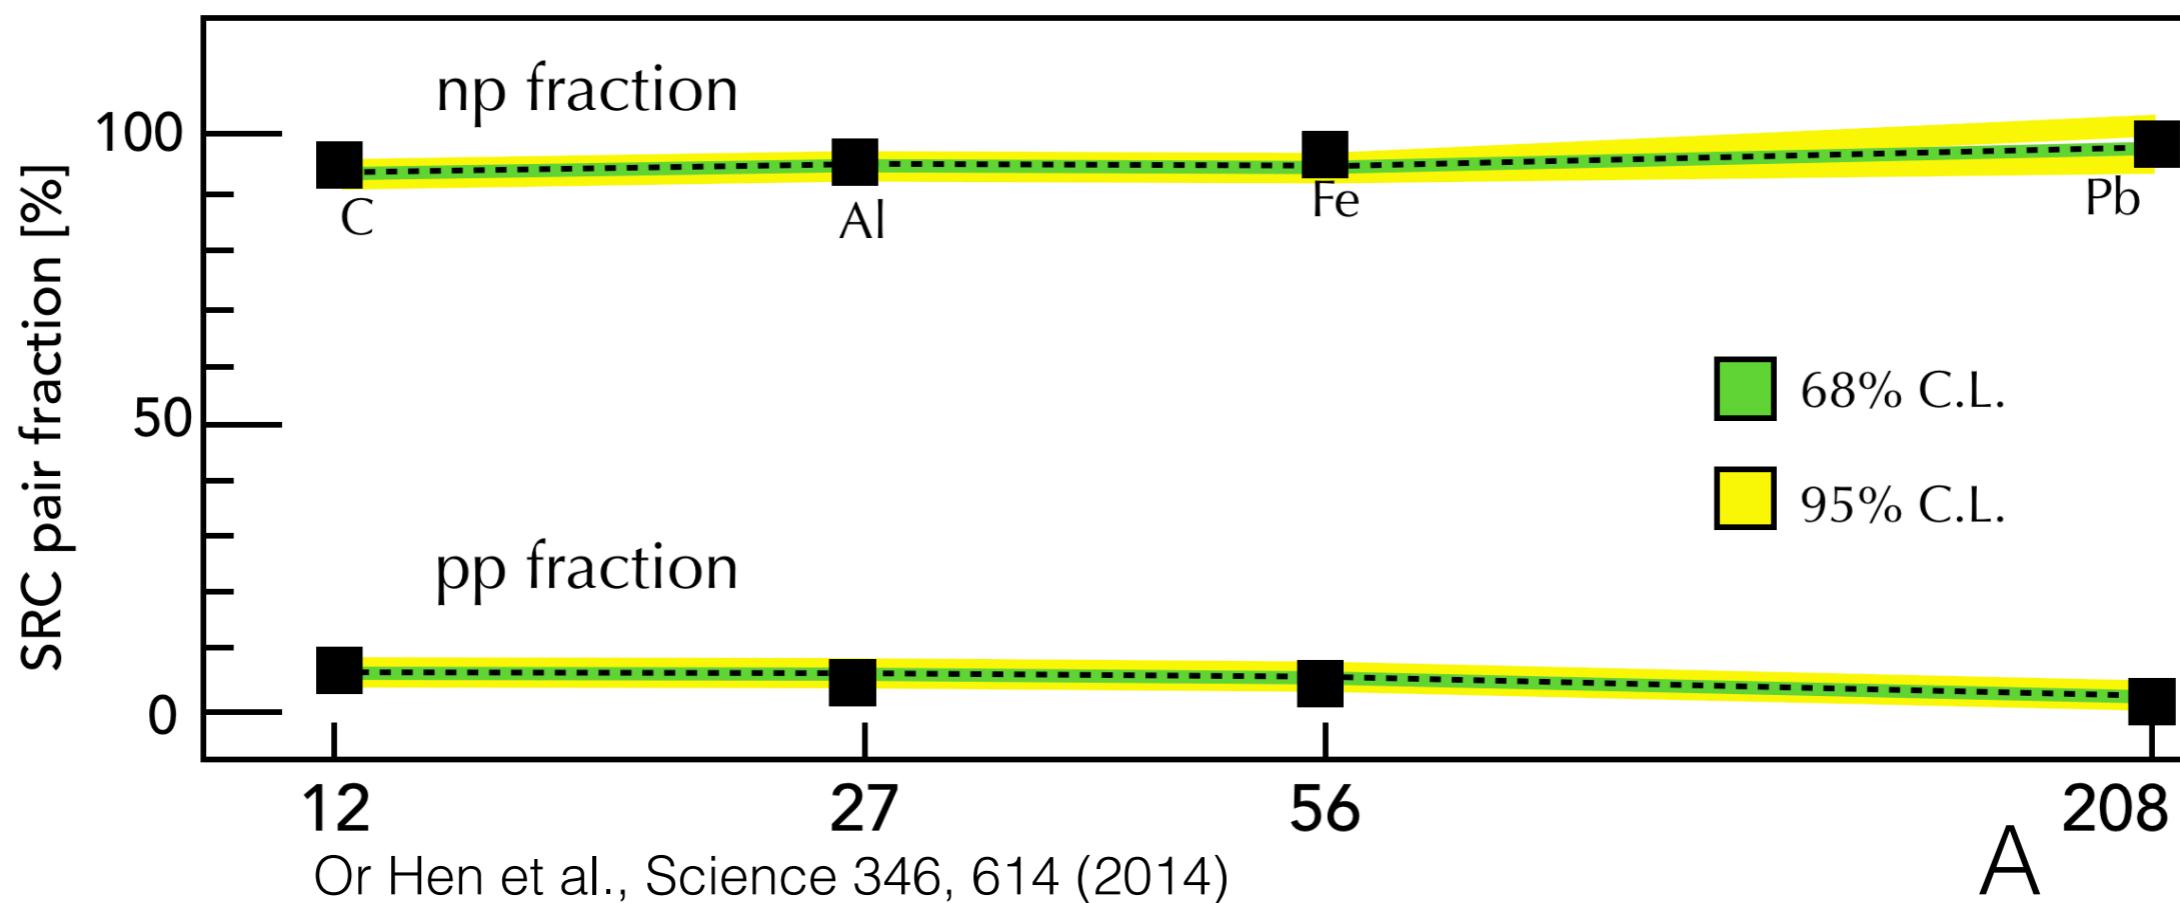

Neutron Excess [N/Z]

- (e'p) and (e'n) measurements
- Indication of np-dominance for SRC pairs

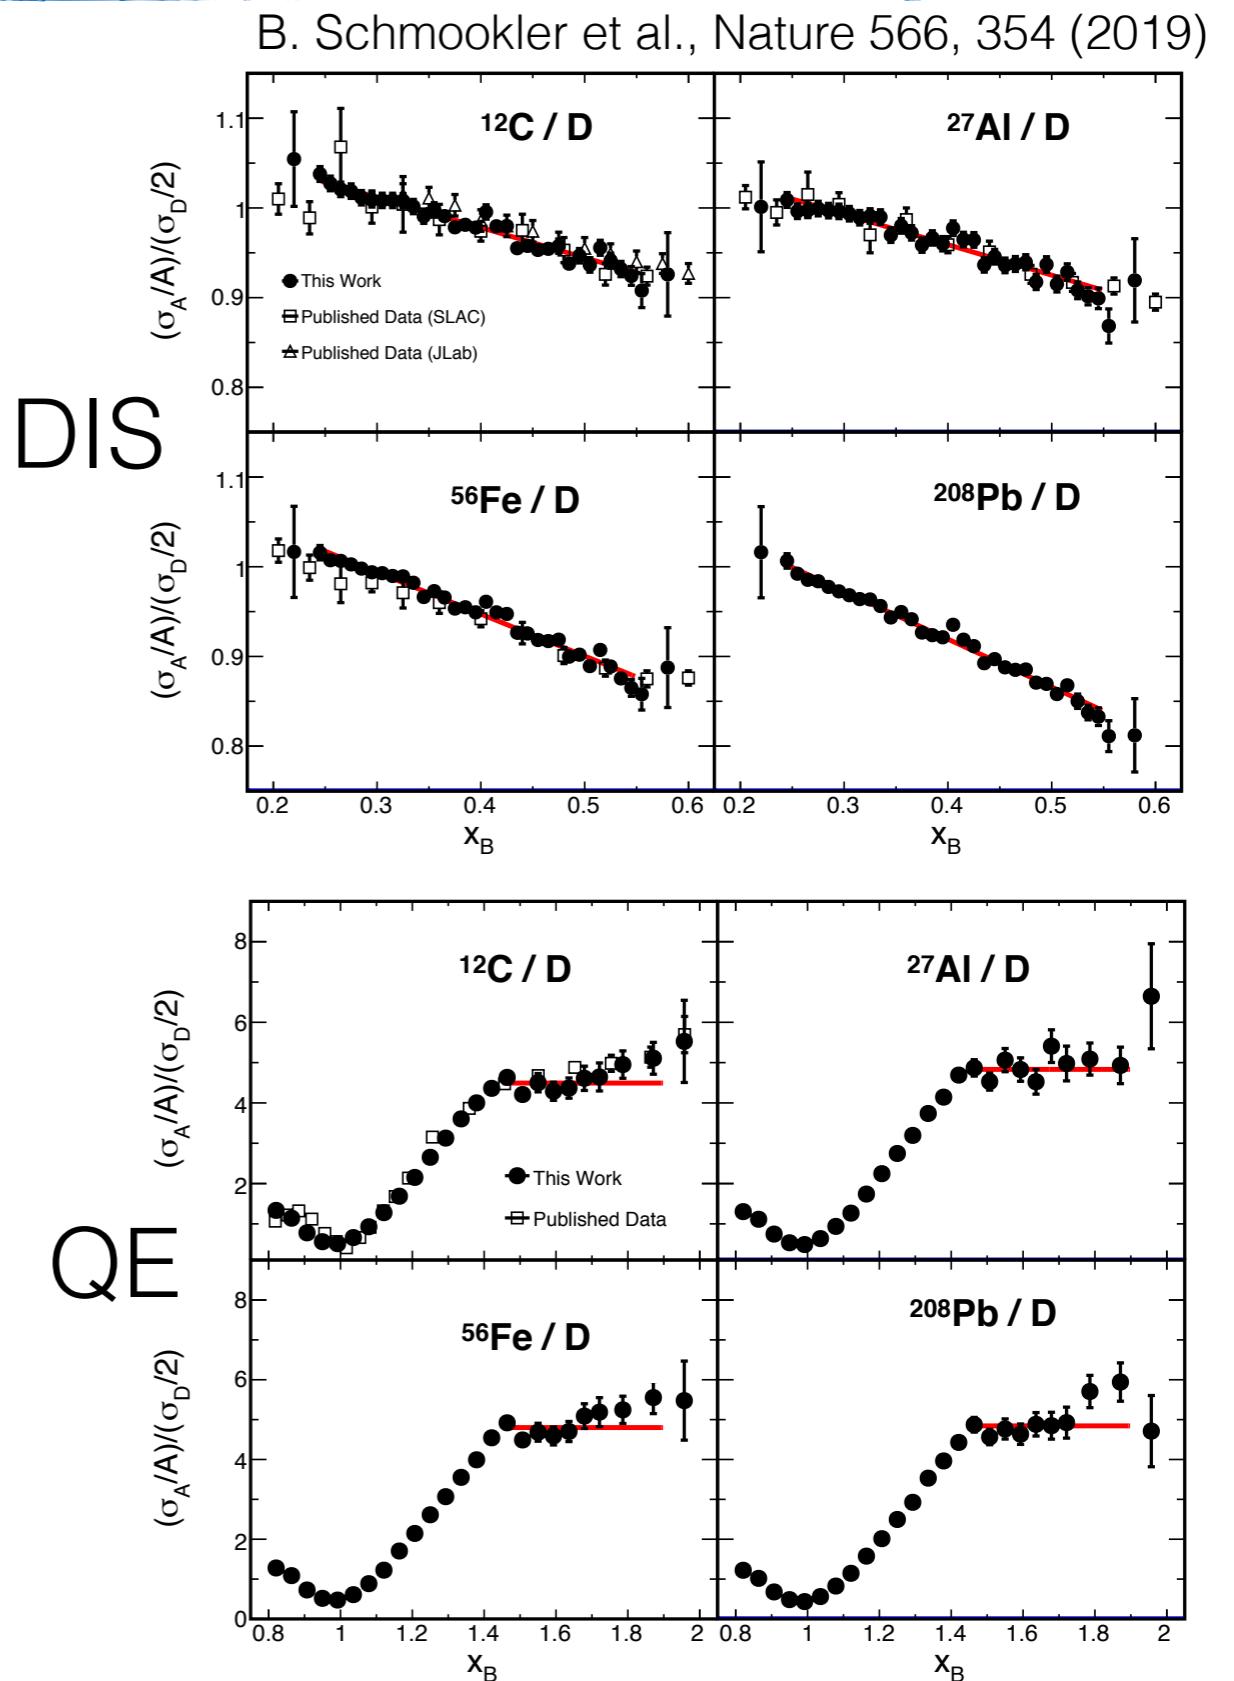

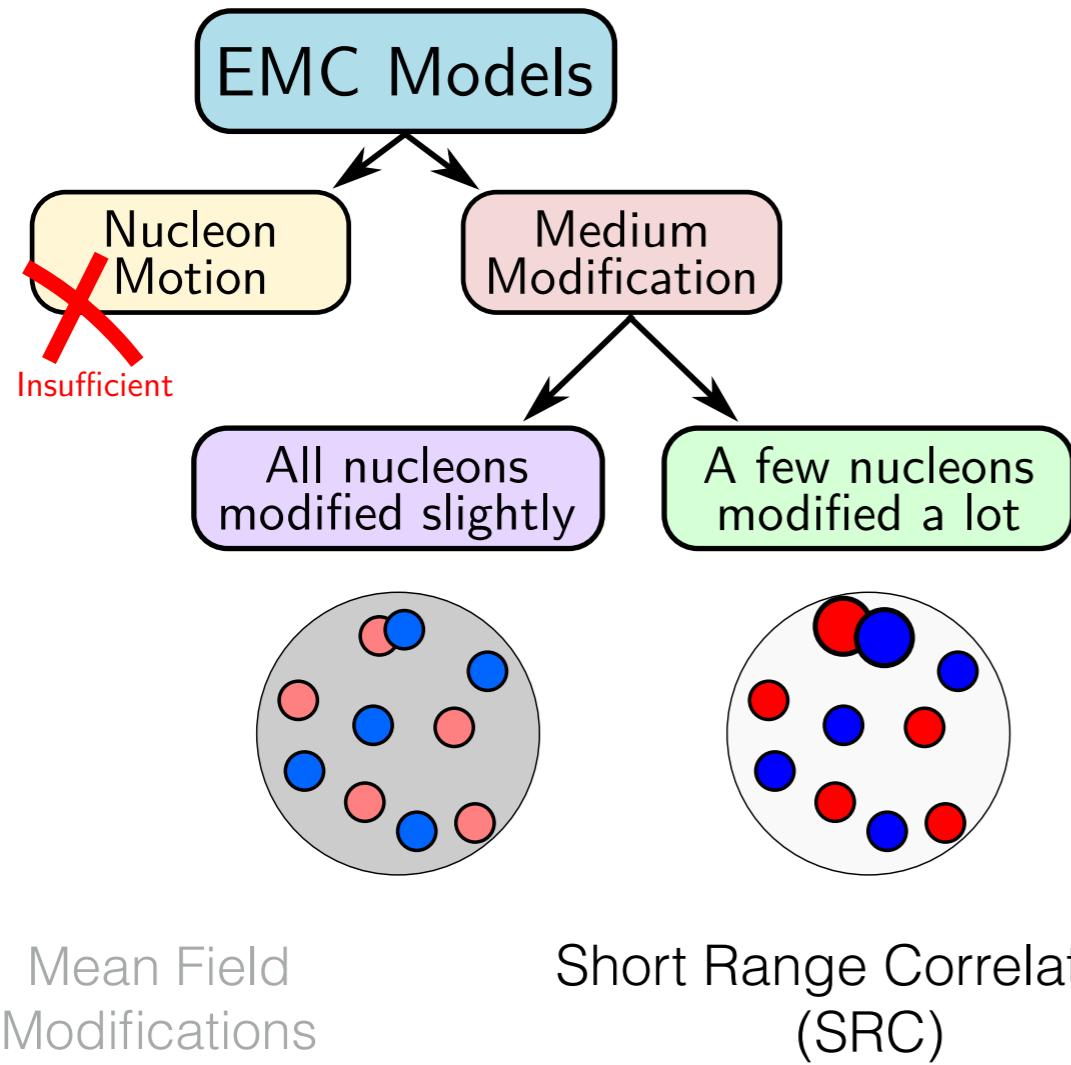

# np-Dominance

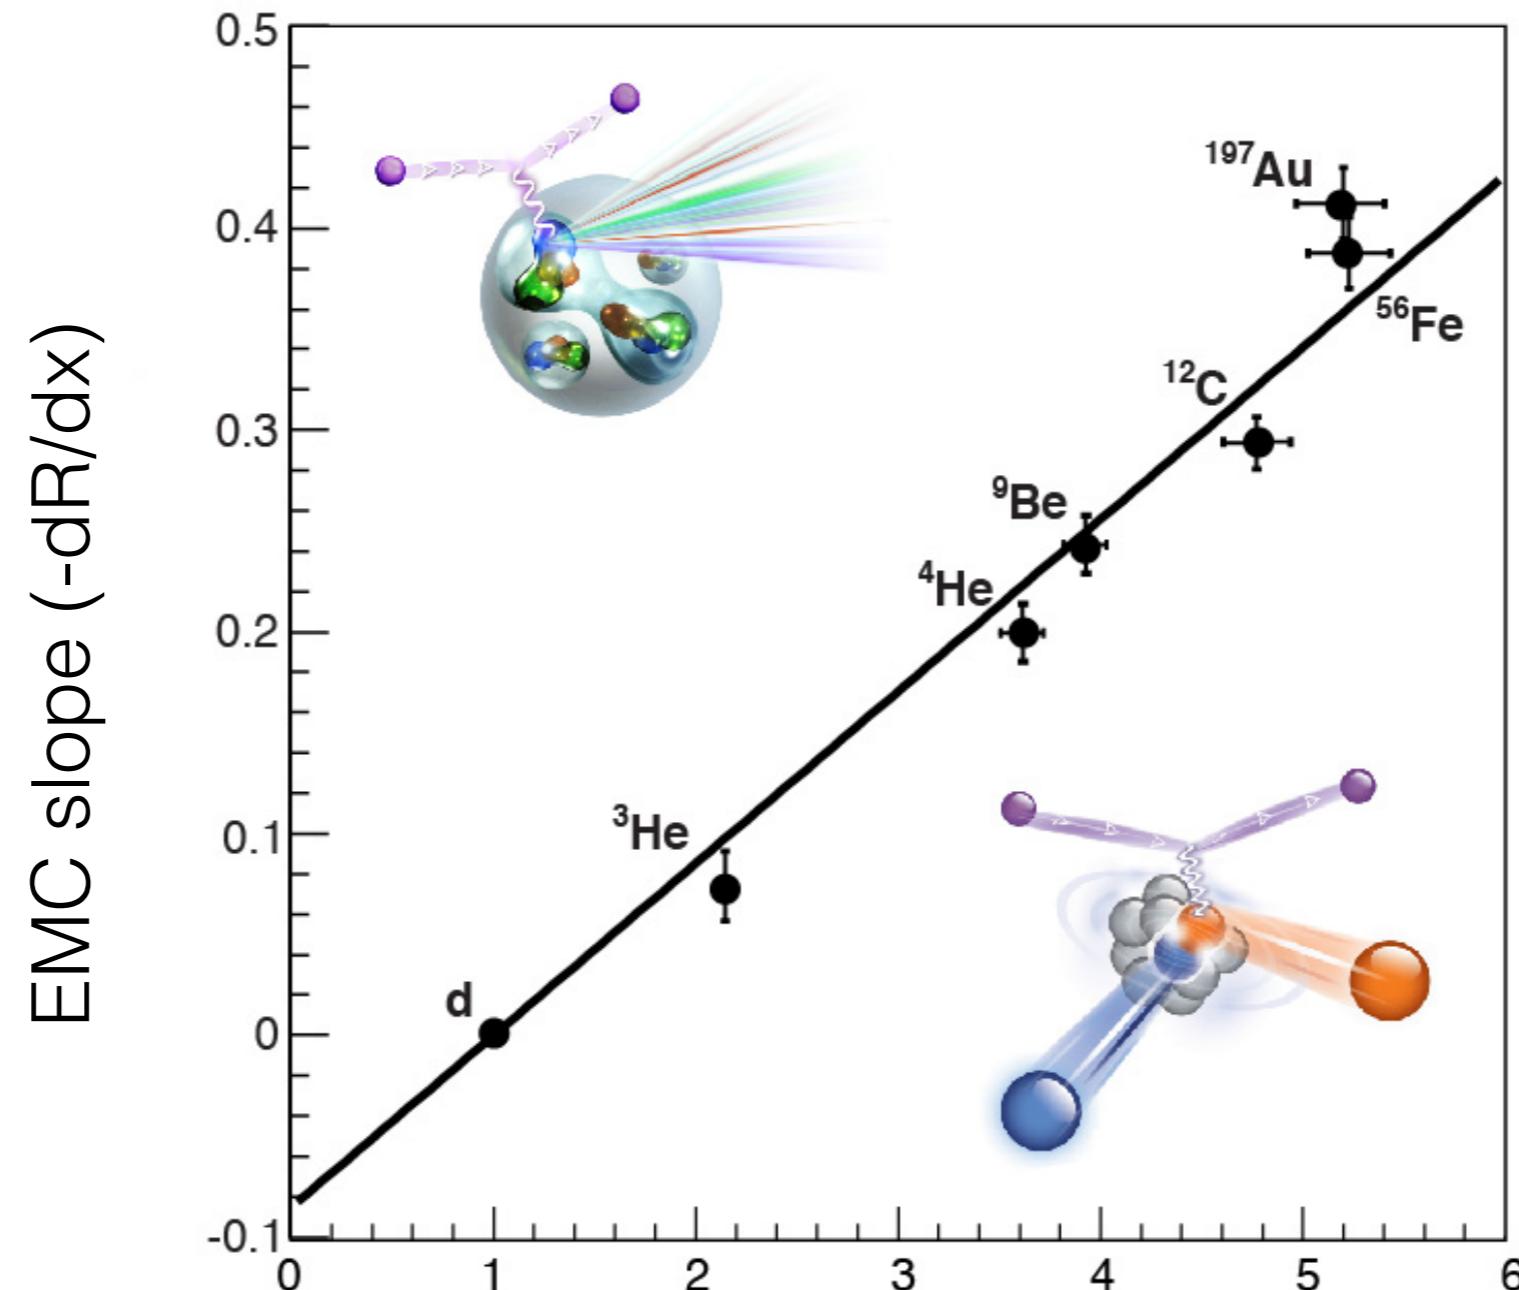

- ( $e'pp$ ) & ( $e'np$ ) measurements
- Probability for np pairs about ~18 larger than for pp pairs

# To Review: EMC and SRC

# EMC and SRC Correlation

Weinstein et al., PRL 106, 052301  
(2011), Hen et al., PRC 85,  
047301(2012)

SRC pair density ( $a_2$ )

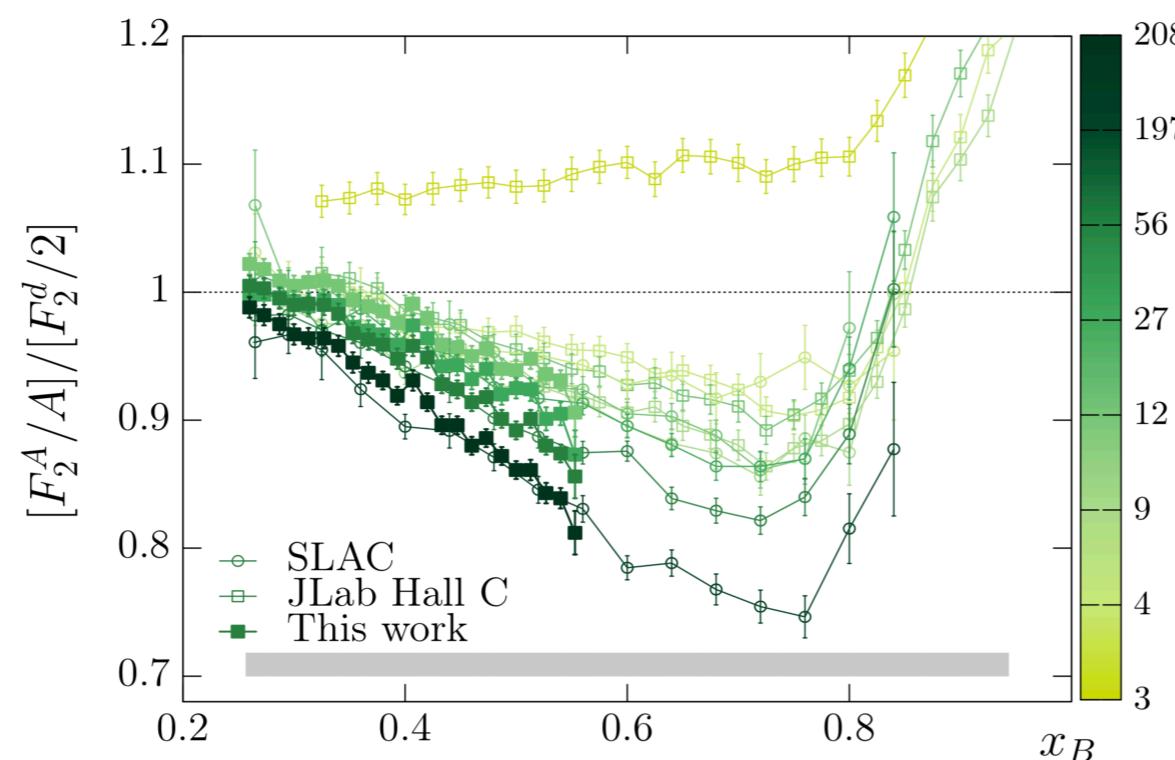

# SRC-EMC Model and Universal function

B. Schmookler et al., Nature 566, 354 (2019)

- Data driven approach
- Modification of  $F_2$  by np-SRC pairs (neglect nn and pp pairs)

$$F_2^A = ZF_2^p + NF_2^n + n_{SRC}^A(\Delta F_2^p + \Delta F_2^n)$$

Bound = ``Quasi-free'' + Modified SRC

# SRC-EMC Model and Universal function (2)

B. Schmookler et al., Nature 566, 354 (2019)

- Data driven approach
- Modification of  $F_2$  by np-SRC pairs (neglect nn and pp pairs)

$$F_2^A = ZF_2^p + NF_2^n + n_{SRC}^A(\Delta F_2^p + \Delta F_2^n)$$

Bound = ``Quasi-free'' + Modified SRC

$F_2^n$  not well constrained but solve by

- $F_2^d = F_2^p + F_2^n + n_{SRC}^d(\Delta F_2^p + \Delta F_2^n)$
- $a_2 = \frac{2}{N} n_{SRC}^A / n_{SRC}^d$

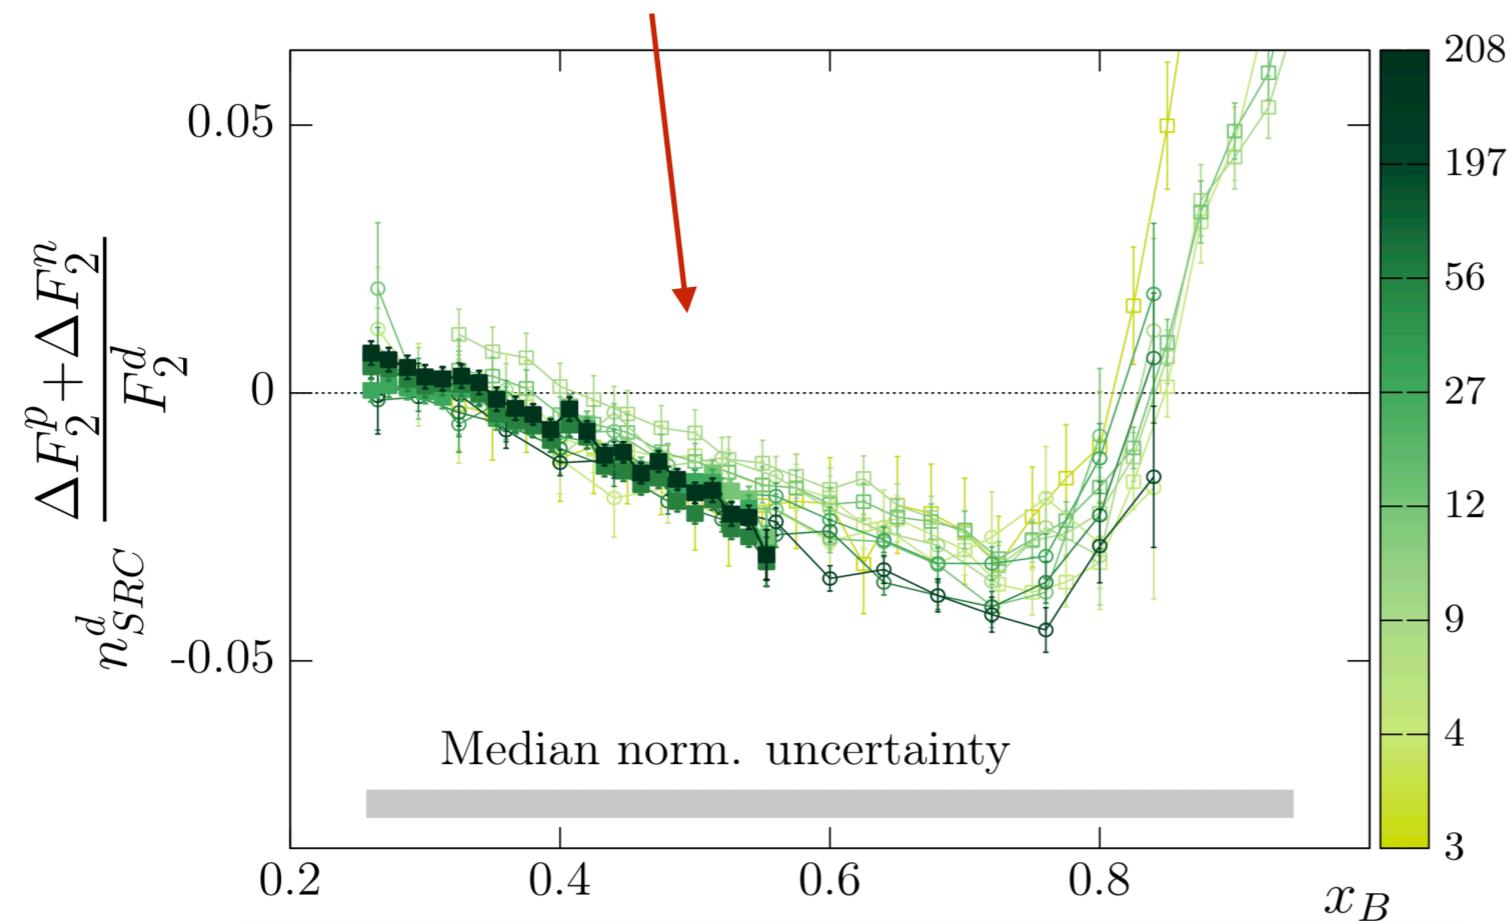

# SRC-EMC Model and Universal function (3)

B. Schmookler et al., Nature 566, 354 (2019)

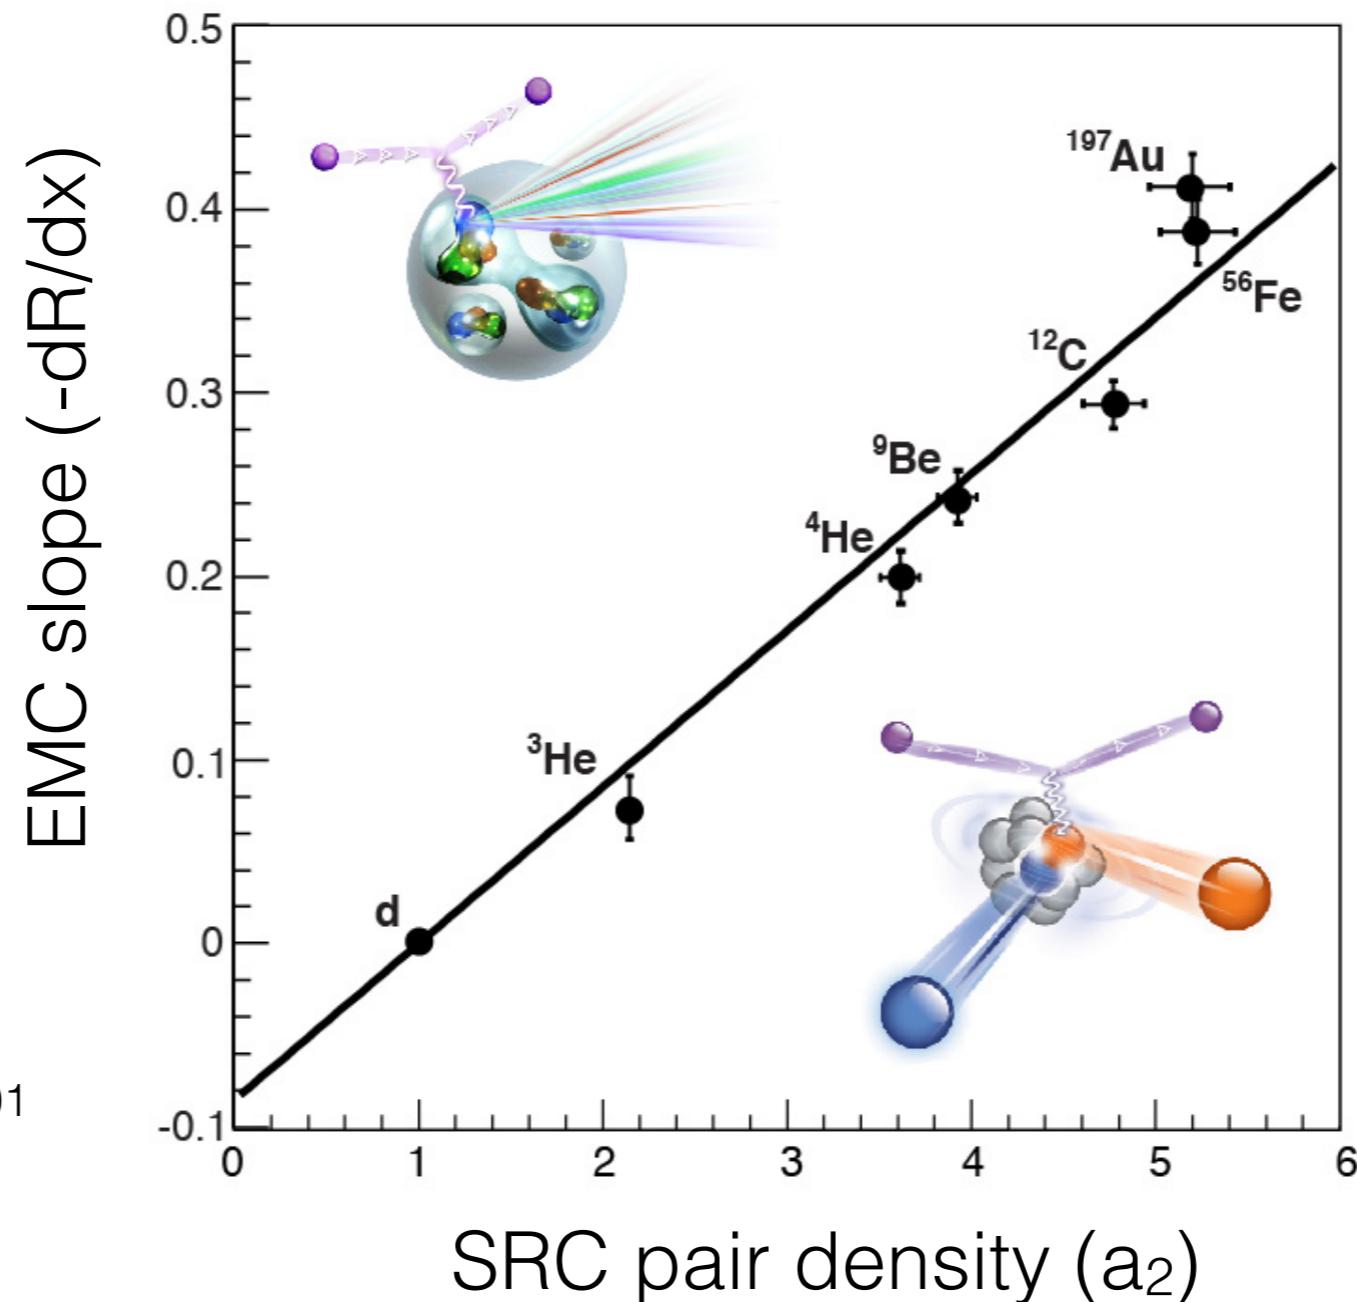

$$n_{SRC}^d \frac{\Delta F_2^p + \Delta F_2^n}{F_2^d} = \frac{\frac{F_2^A}{F_2^d} - (Z - N) \frac{F_2^p}{F_2^d} - N}{\frac{A}{2} a_2 - N}$$

Universal function

Nucleus Dependent

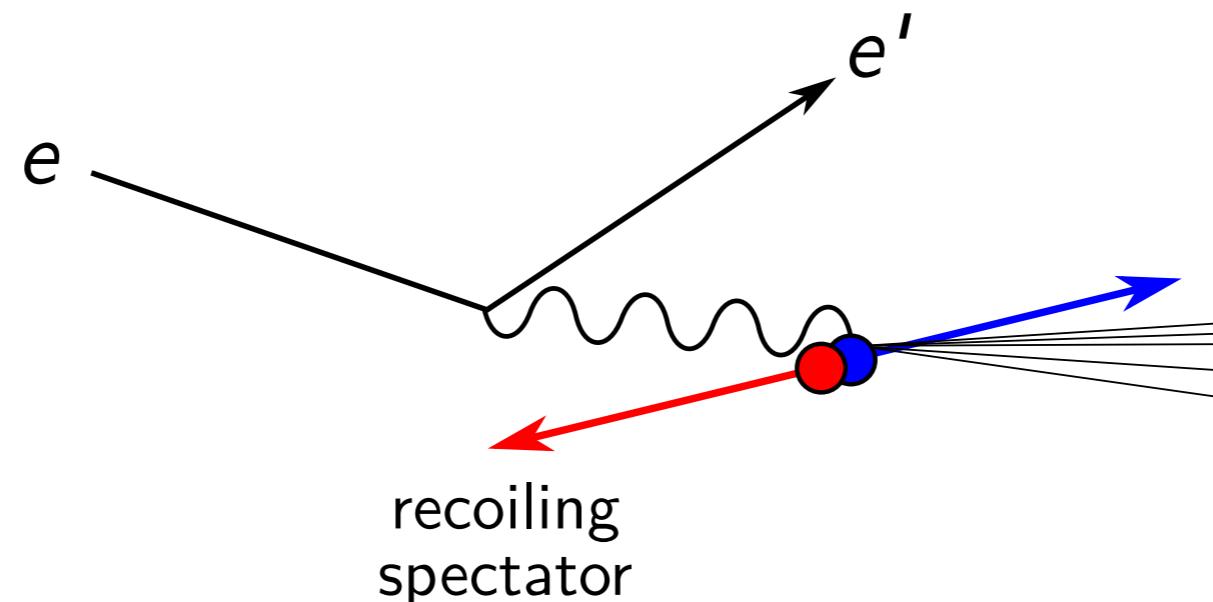

# EMC and SRC Correlation

Weinstein et al., PRL 106, 052301  
(2011), Hen et al., PRC 85,  
047301(2012)

- Are high-momentum nucleons responsible for the EMC effect?
- Does nucleon modification depend on nucleon momentum?

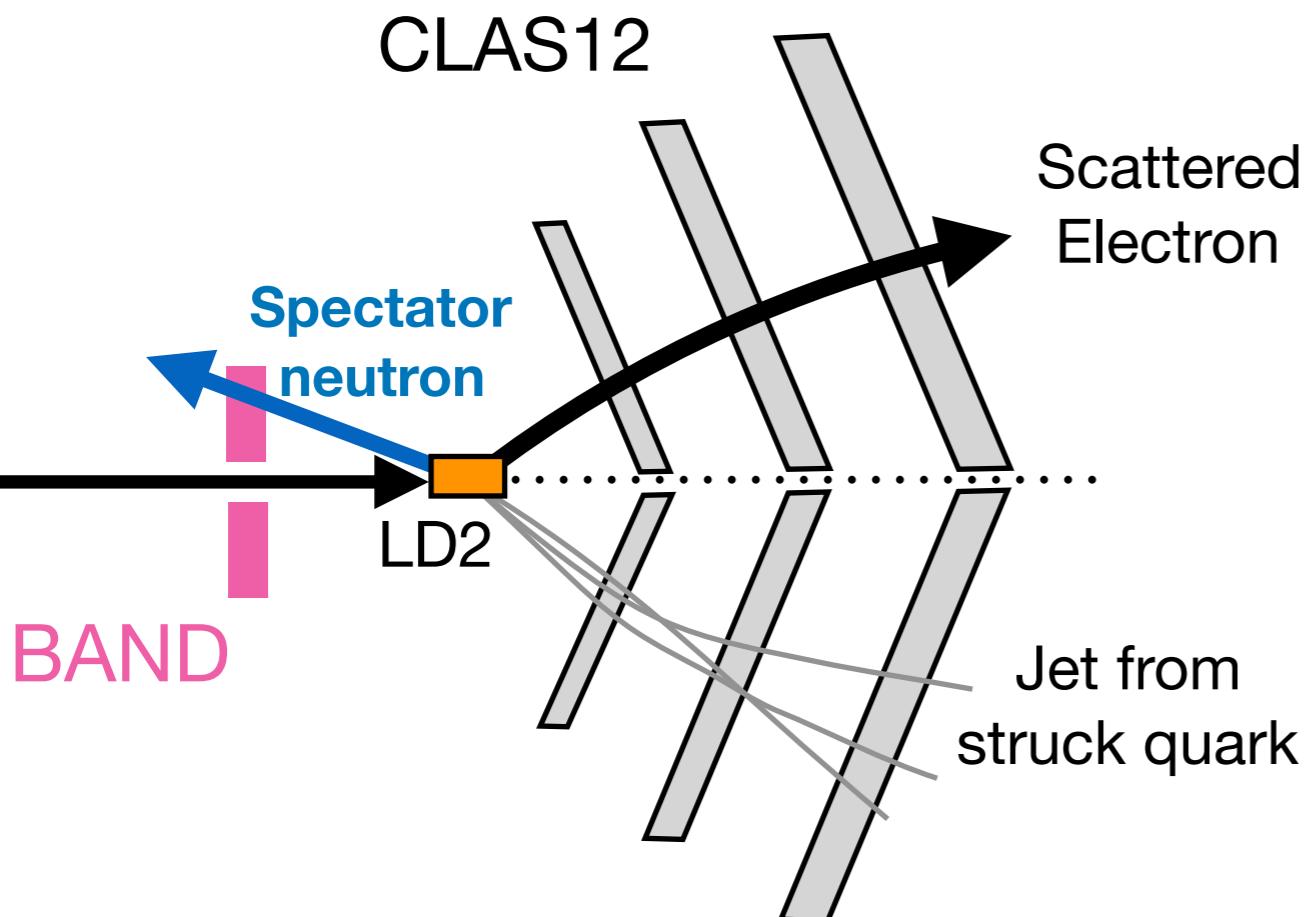

# Tagged DIS on Deuterium

- “Tag“ interacting nucleon by measuring spectator
- How does the bound nucleon structure function depend on nucleon momentum?
- Explaining the EMC effect

# Tagged DIS at JLab

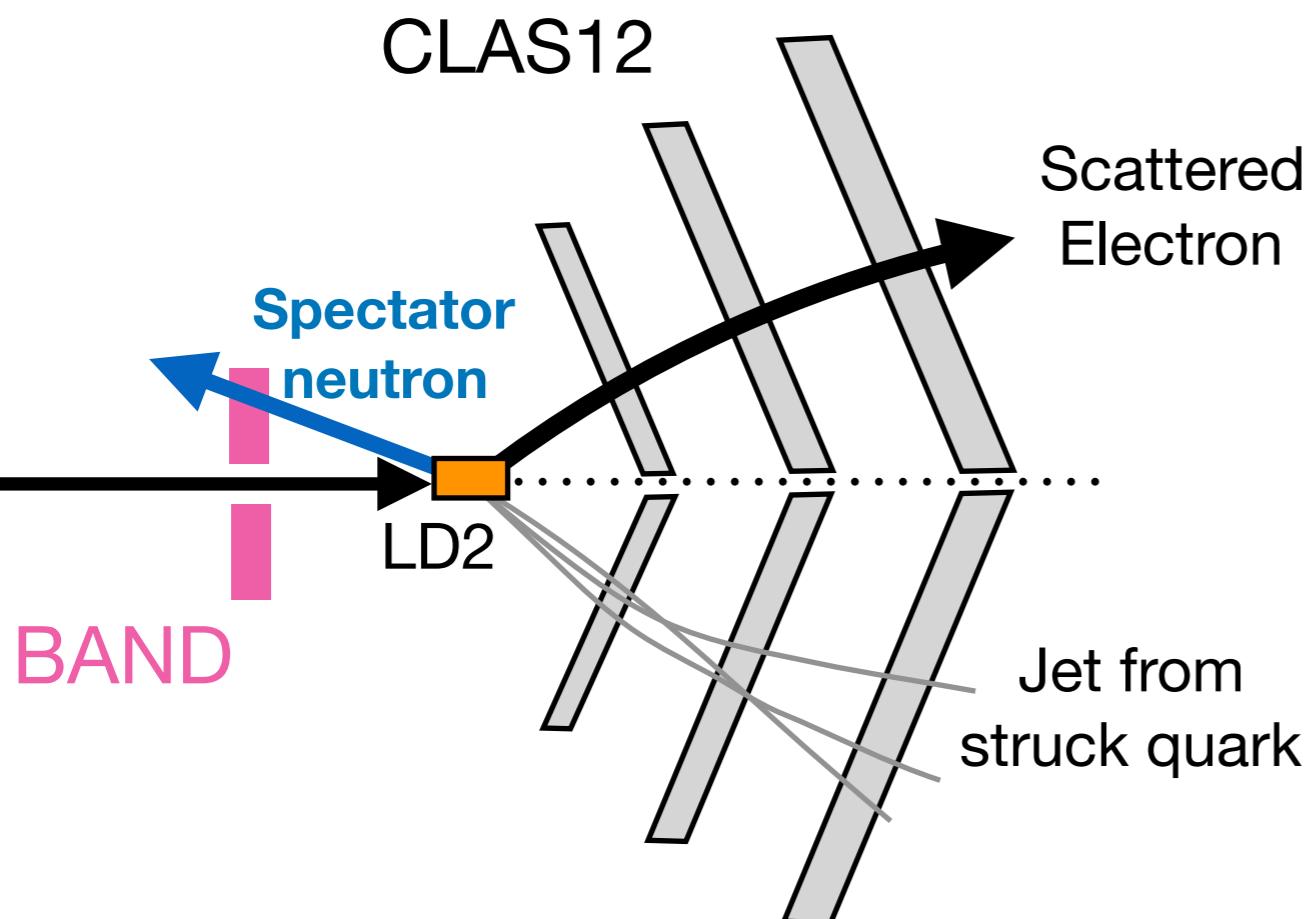

Hall B:  
CLAS 12 + Backward Angle  
Neutron Detector (BAND)

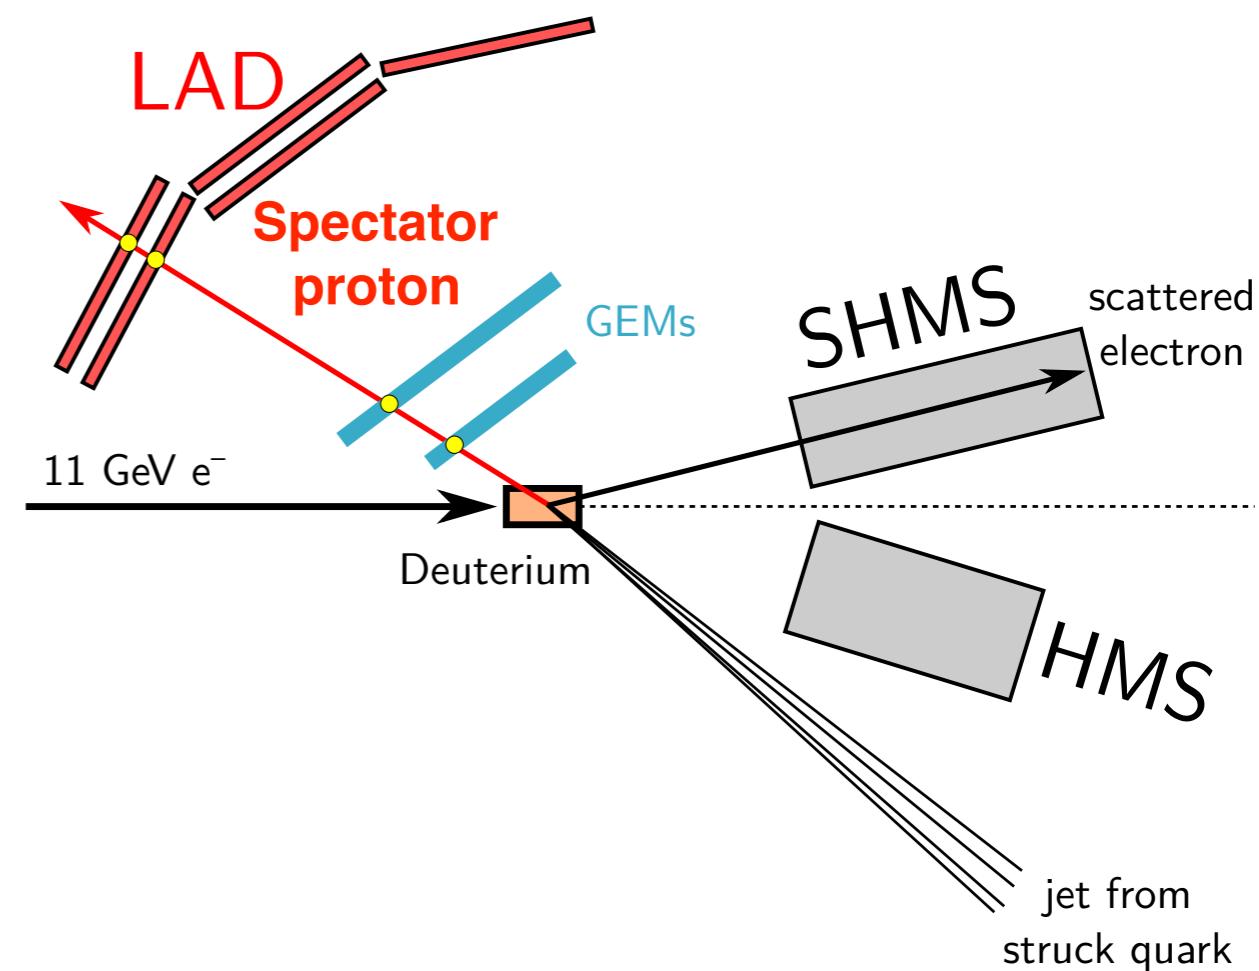

- Took first data in Spring 19
- More to come in Fall 19

# Tagged DIS at JLab

Hall B:  
CLAS 12 + Backward Angle  
Neutron Detector (BAND)

Hall C:  
SHMS/HMS + Large  
Angle Detector (LAD)

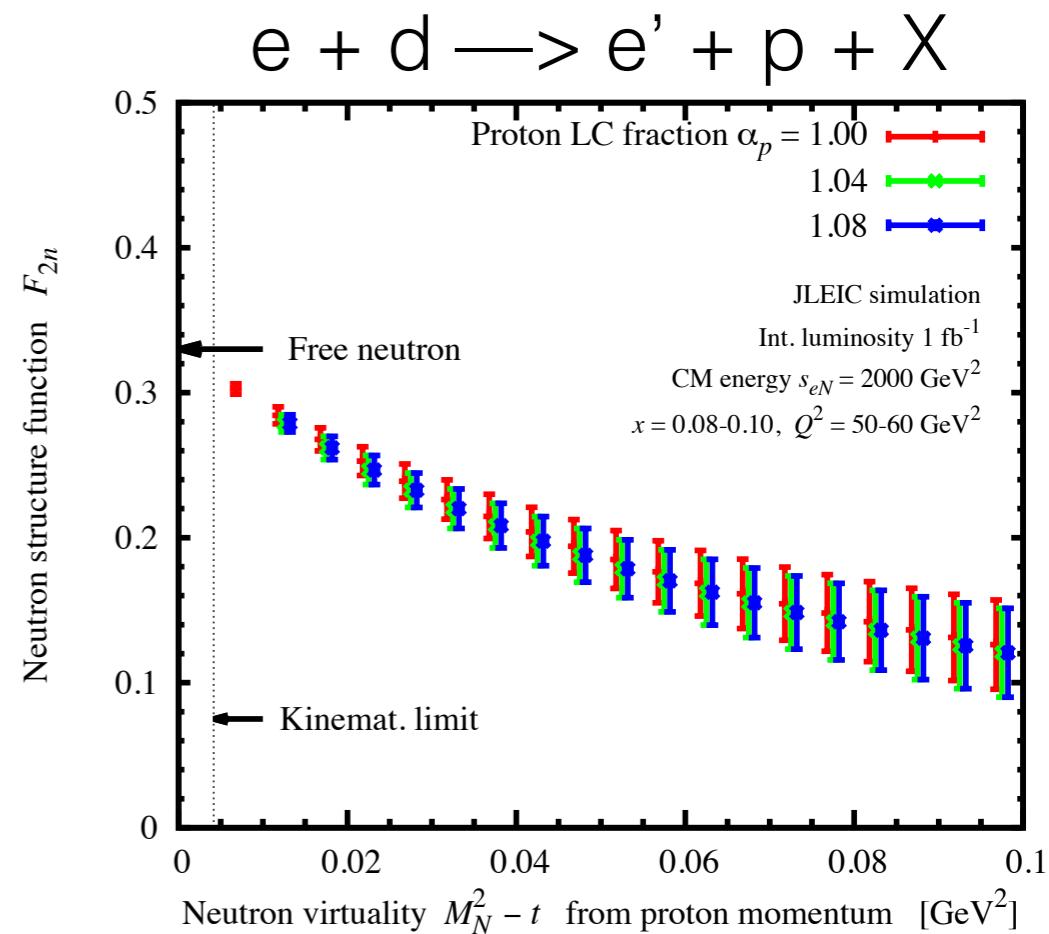

- Took first data in Spring 19
- More to come in Fall 19

- LAD built, GEMs to be build
- Run in 2021?

# Tagged DIS at EIC

- Proton and Neutron tagging
- Polarized deuterons (vector/tensor)
- $A > 2$  nuclei
- Exclusive processes
- Detecting of recoil particles in forward direction
  - up to low angles, full acceptance
  - over a wide range of momenta
- Possible detection of A-2 system

Jefferson Labs' LDRD project (2014/15)  
``*Physics potential of polarized light ions with EIC@JLab*''

# Quasielastic Simulation Results

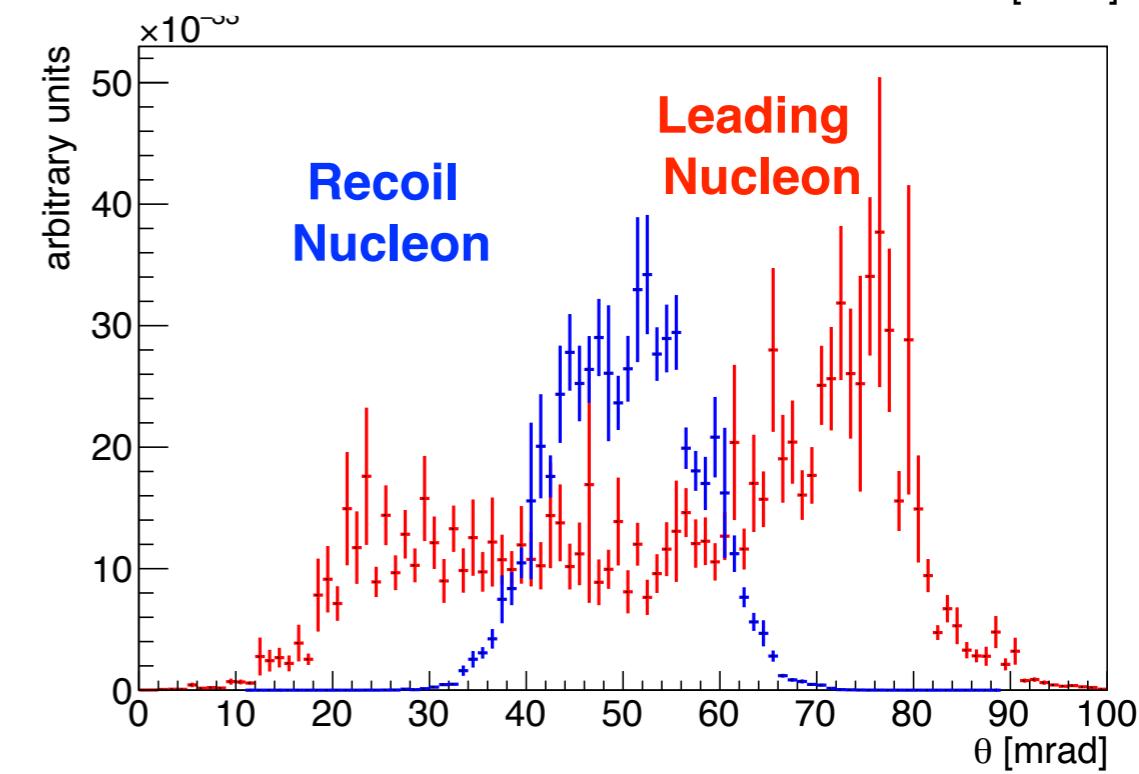

(JL)EIC e+C, 5x50 GeV<sup>2</sup>, QE selection cuts

**no crossing angle**

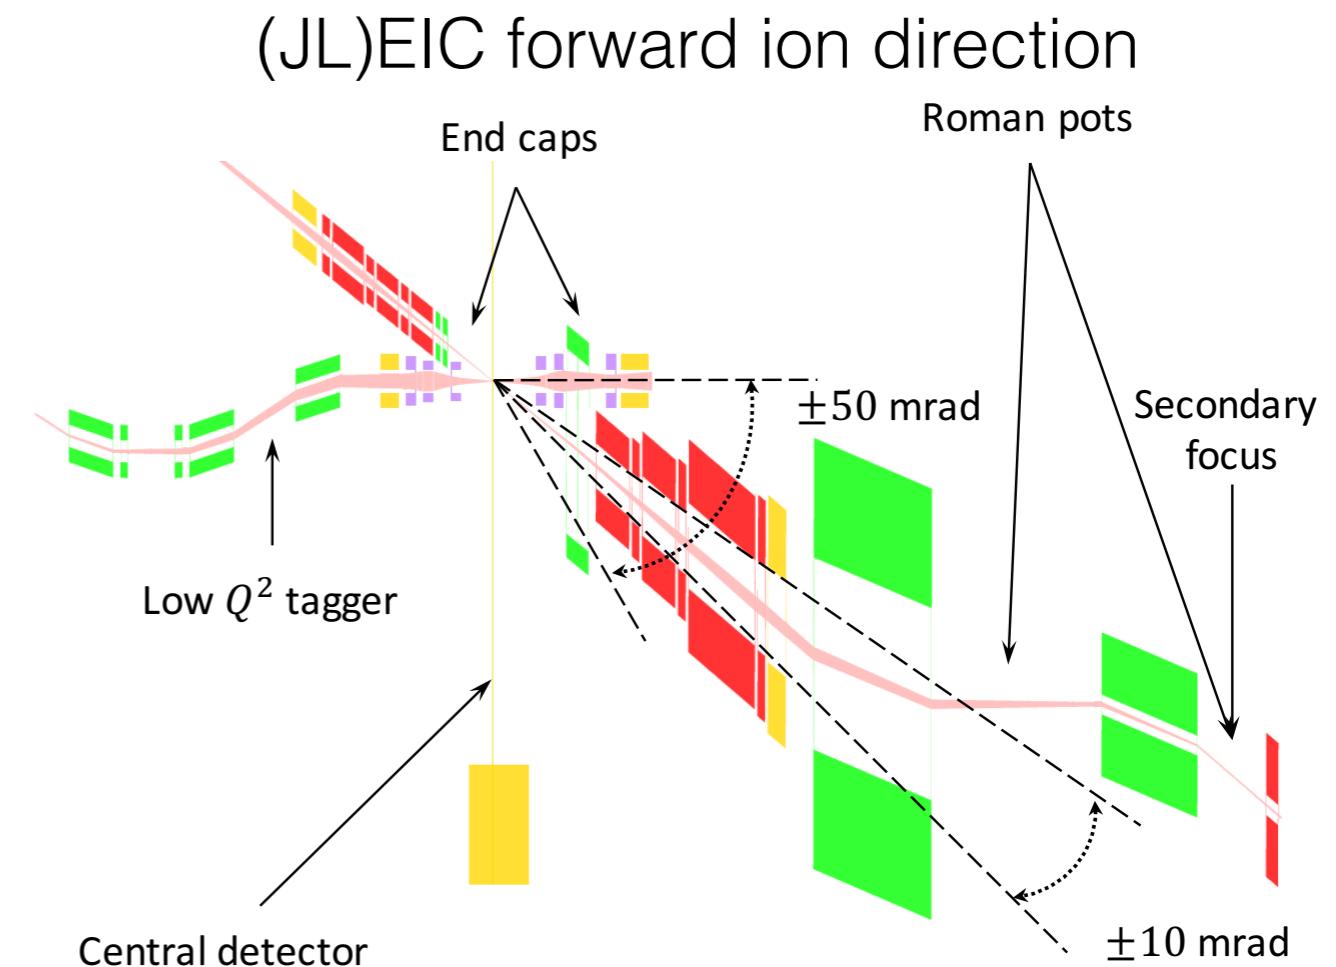

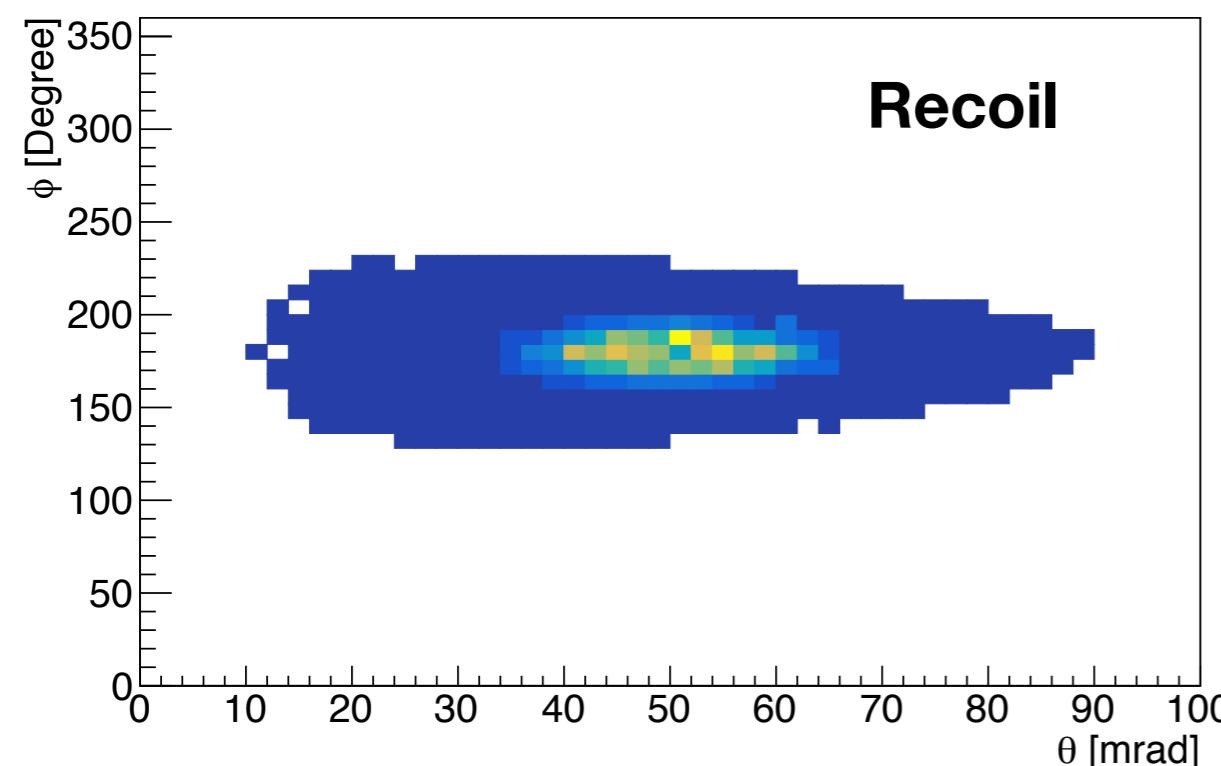

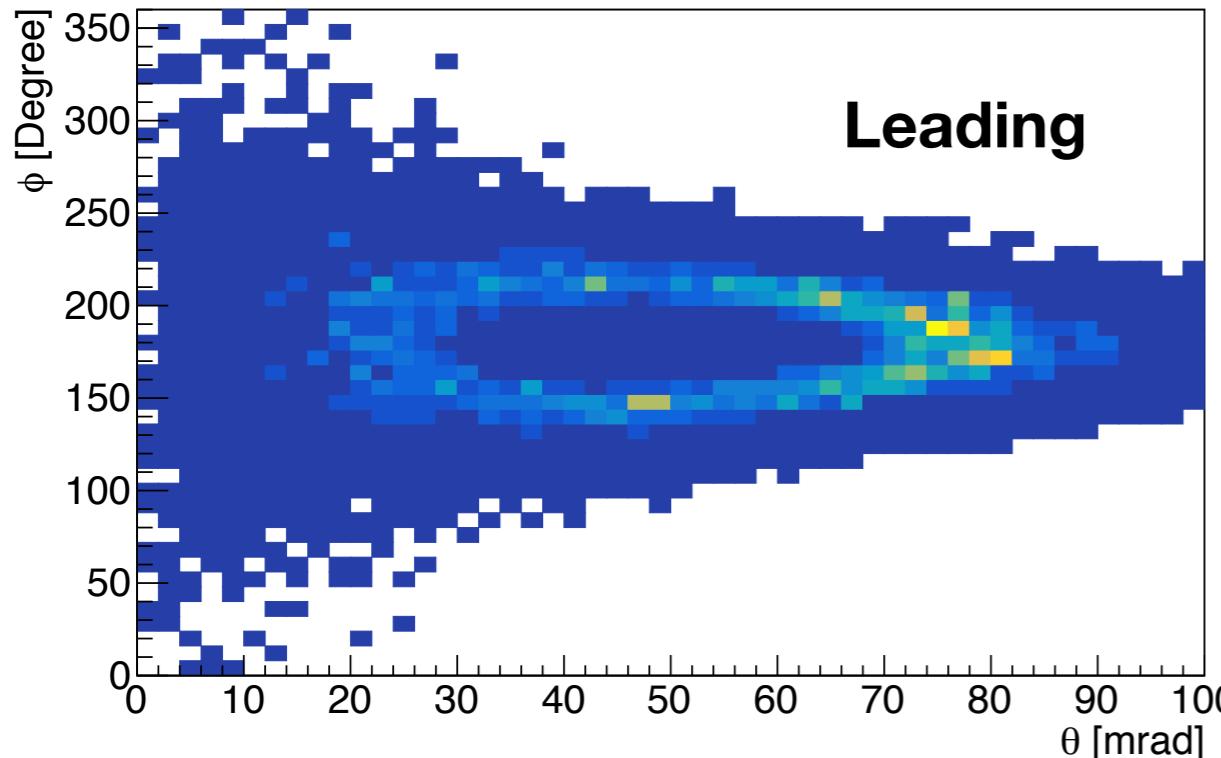

**50 mrad  
crossing  
angle**

# Quasielastic SRCs: $\phi - \theta$

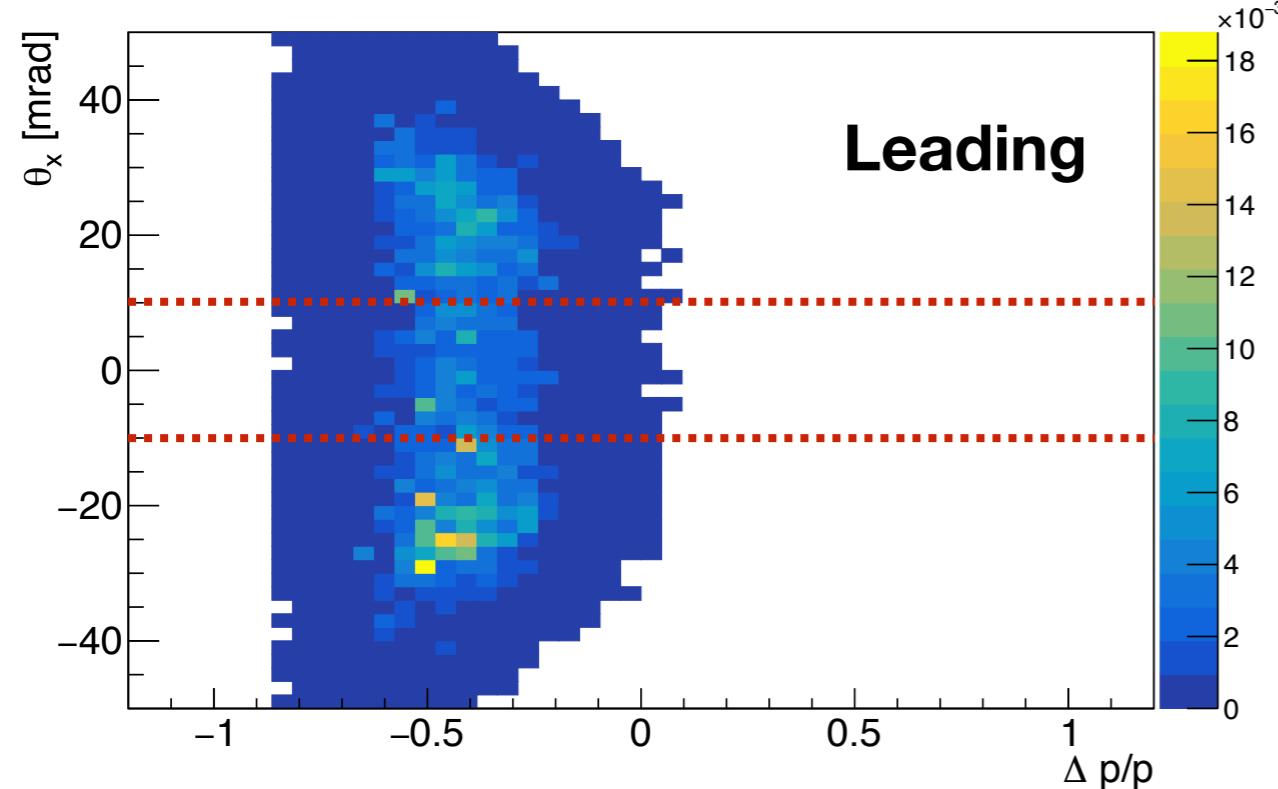

(JL)EIC e+C, 5x50 GeV<sup>2</sup>, QE selection cuts

- $\pm 10$  mrad acceptance  $\rightarrow$  zero degree detectors
- up to  $\pm 50$  mrad within magnet (not full  $\phi$  due to first electron dipole)

# Quasielastic SRCs - Beam Rigidity

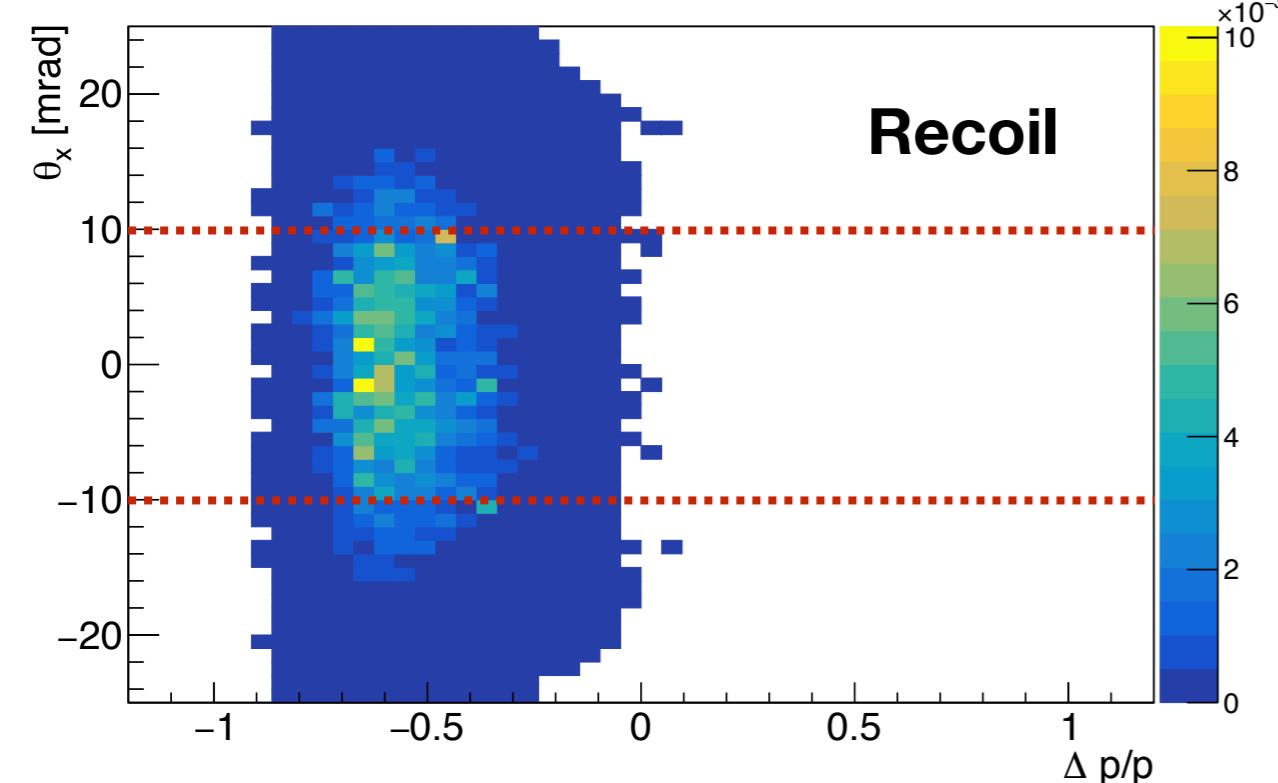

(JL)EIC e+C, 5x50 GeV<sup>2</sup>, QE selection cuts

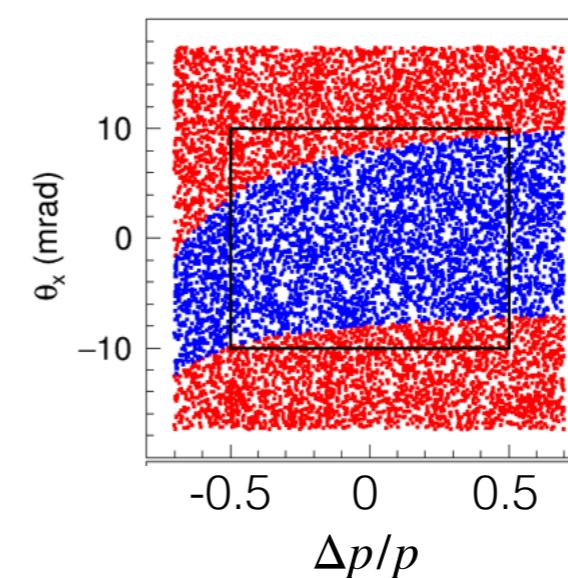

**Leading**

$$\frac{\Delta p}{p} = \frac{\Delta B\rho}{B\rho_{ion}} = \frac{(Z/A)_{ion} \cdot p_f - p_{ion}}{p_{ion}}$$

- Recoils close to ion direction
- Rigidity below 0 as expected
- Rigidity for recoils smaller than for leading
- Coverage for  $\Delta p/p < -0.5$  challenging

**Recoil**

from V. Morozov  
CFNS Summer  
School 2019

Quad aperture  
at 6T

# Summary and Outlook

---

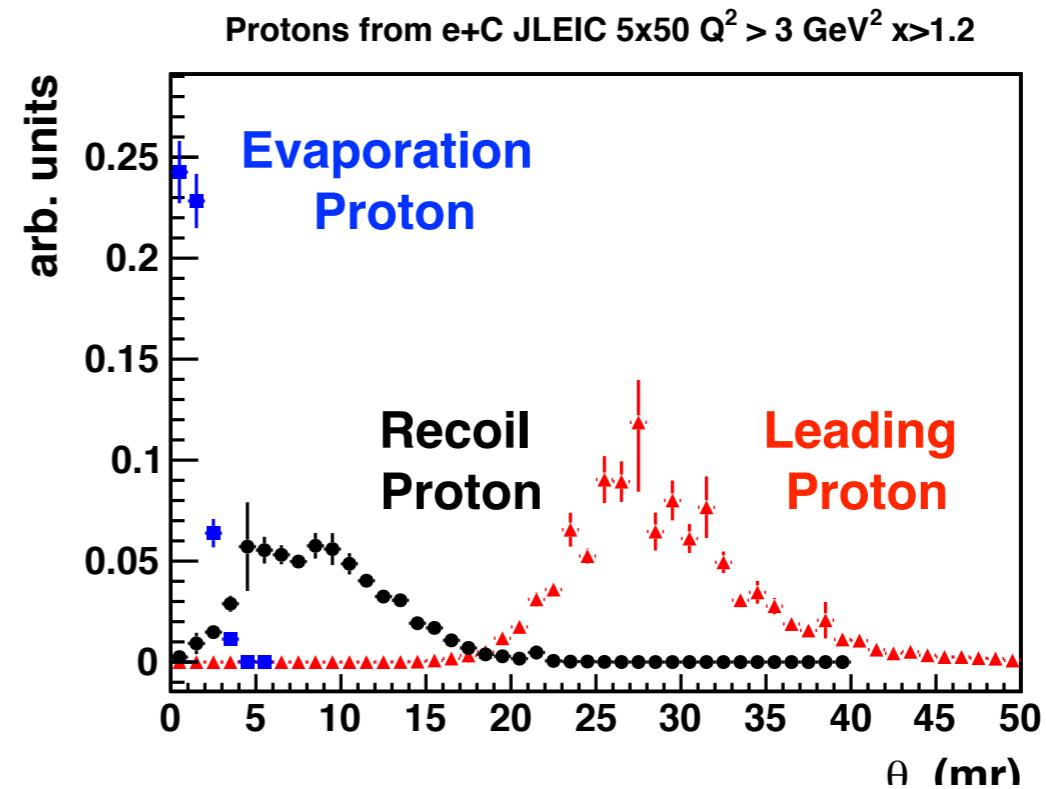

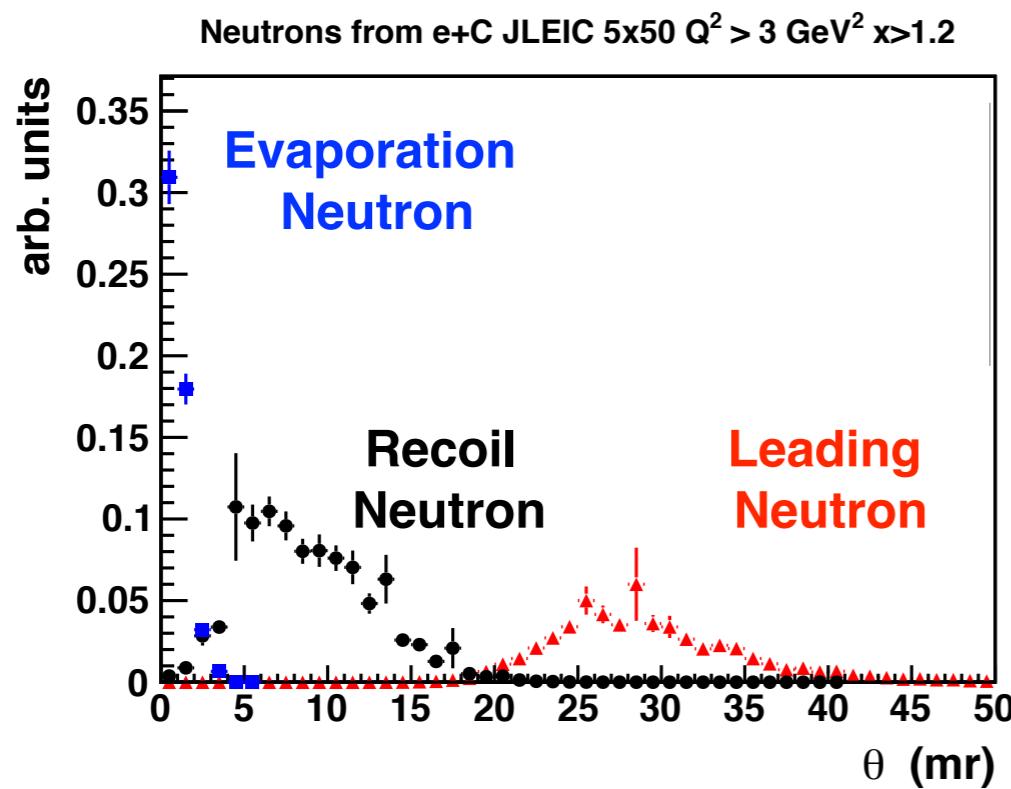

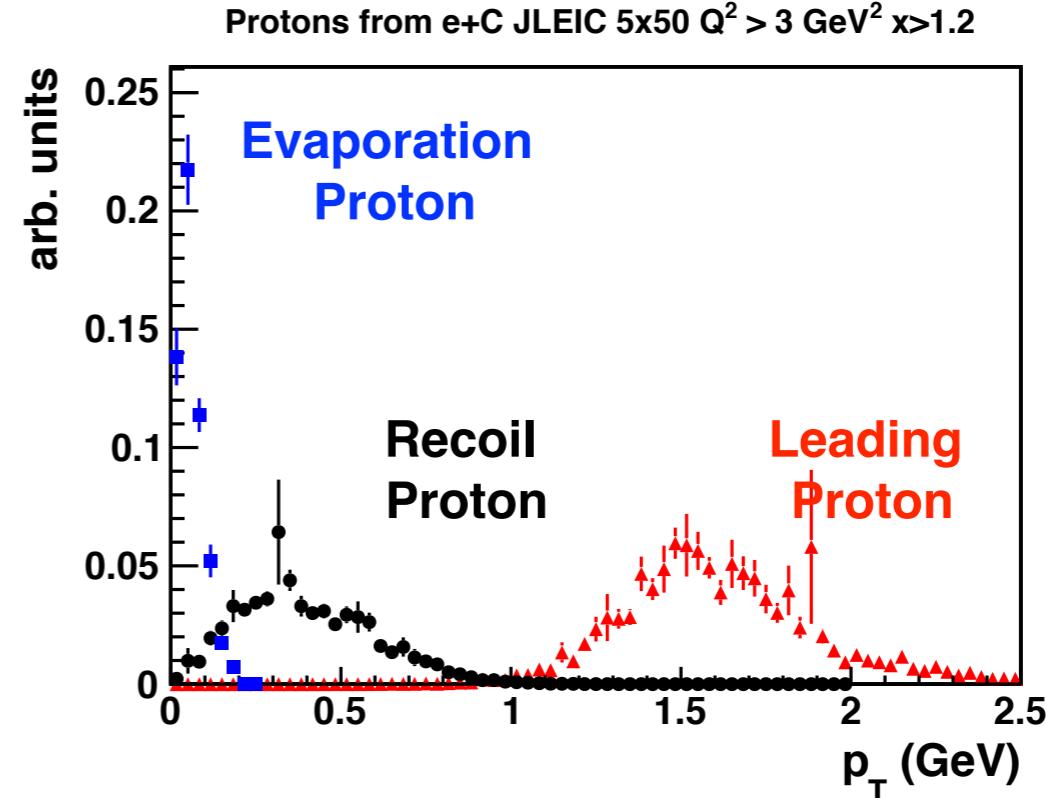

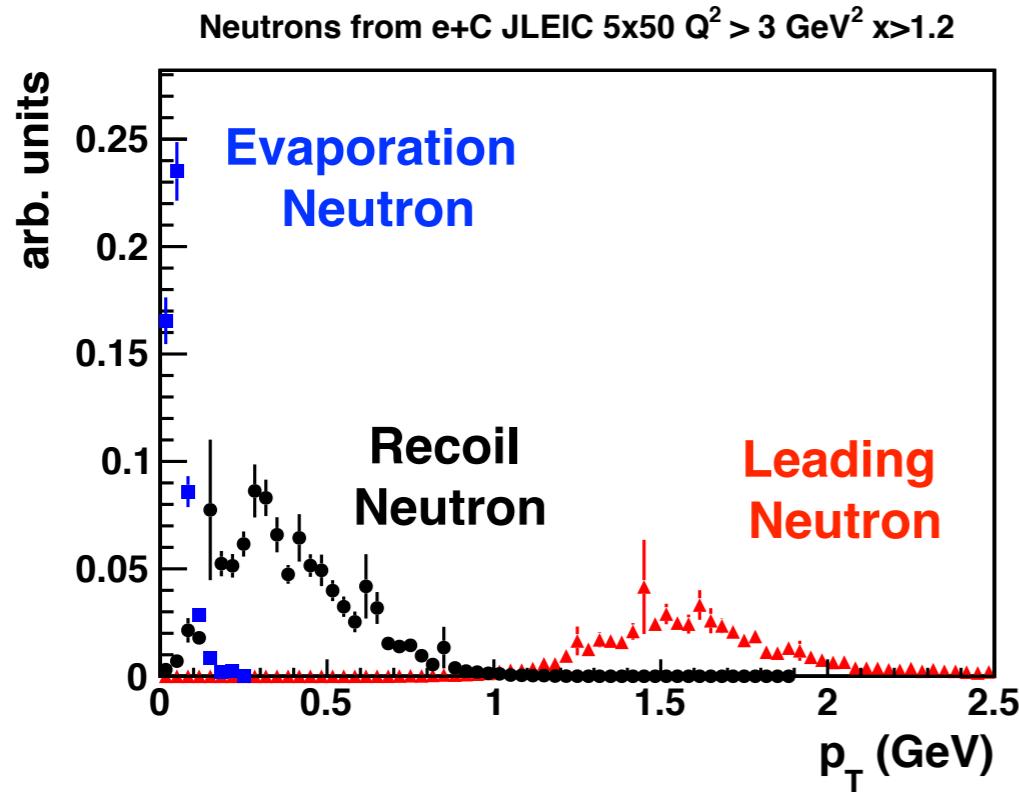

- EMC-SRC correlation from electron scattering
- Tagged DIS measurement at JLab to explain EMC effect
  - Measurement of  $F_2^p$  with CLAS12 plus BAND
  - Measurement of  $F_2^n$  in Hall C with LAD (2021?)
- SRC physics possibilities at (JL)EIC
  - LDRD project
  - First simulation results from QE-SRCs

Near term:

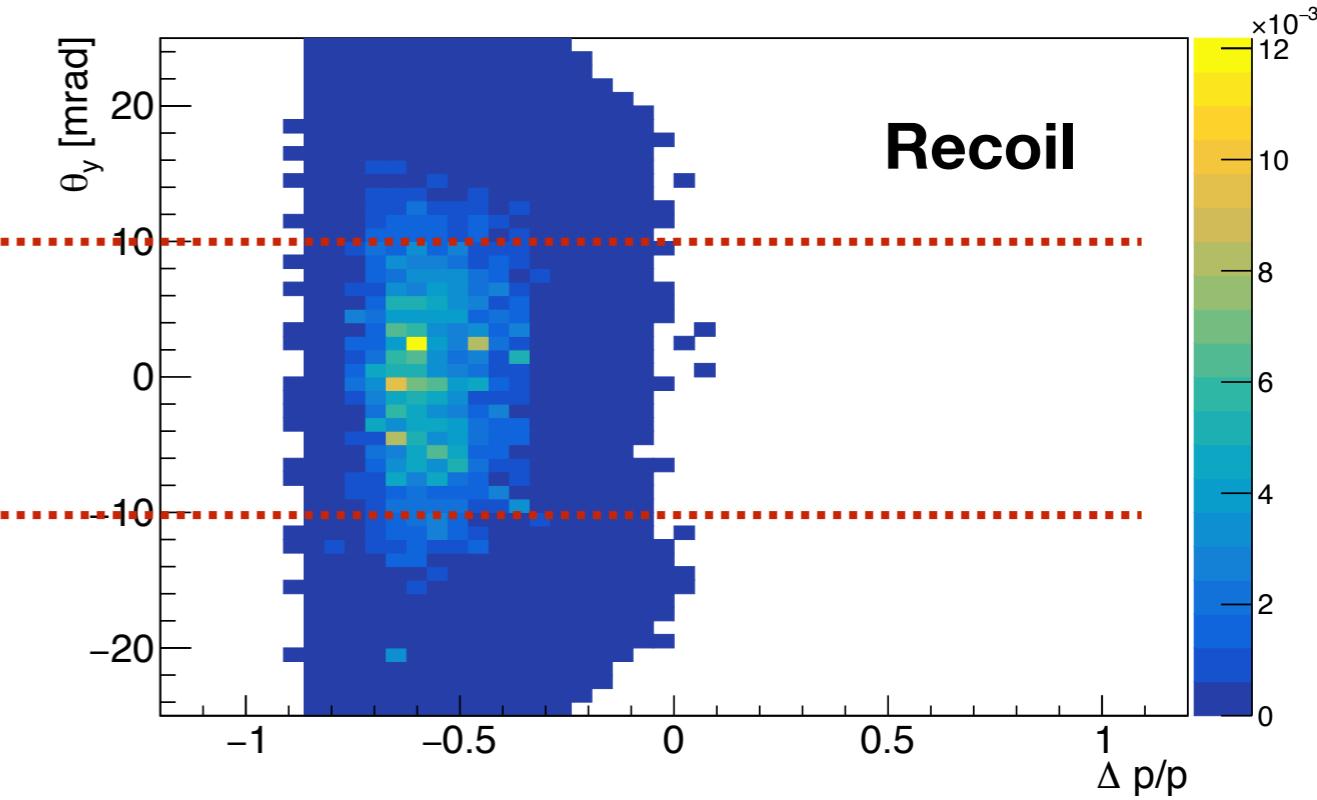

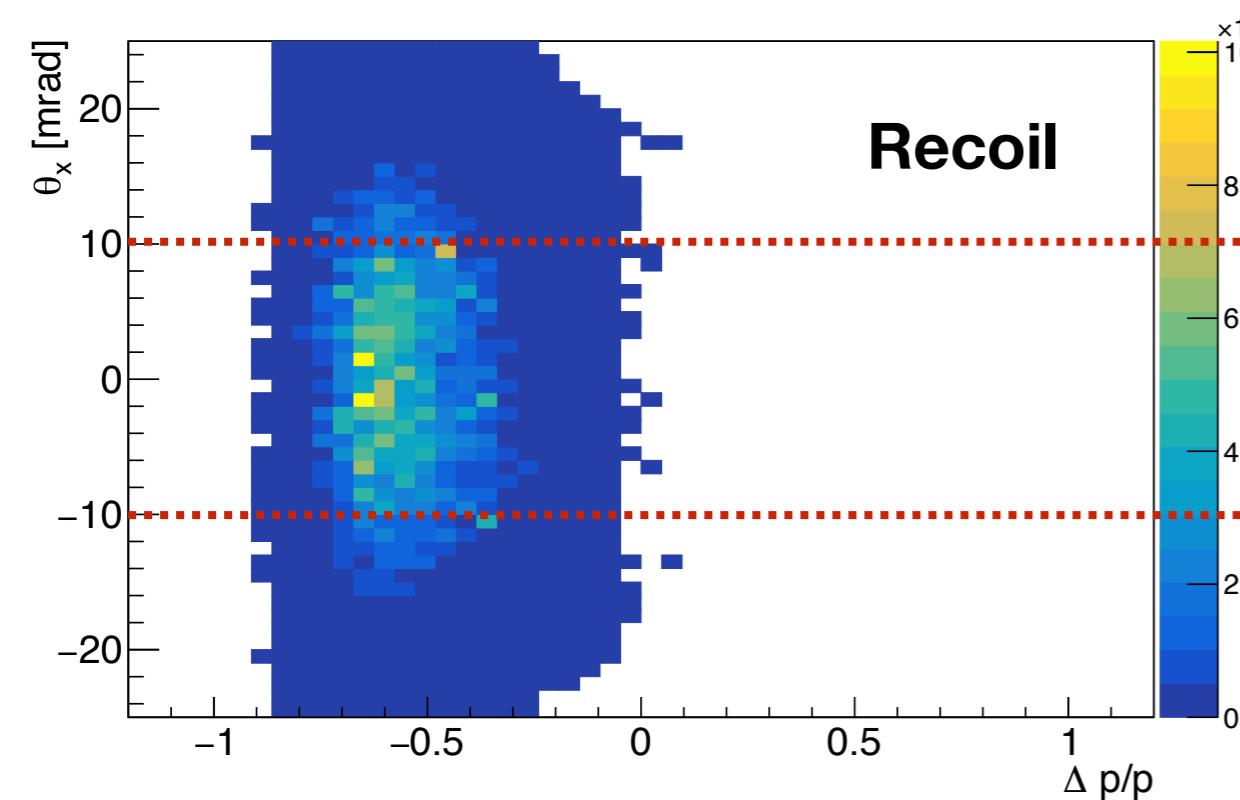

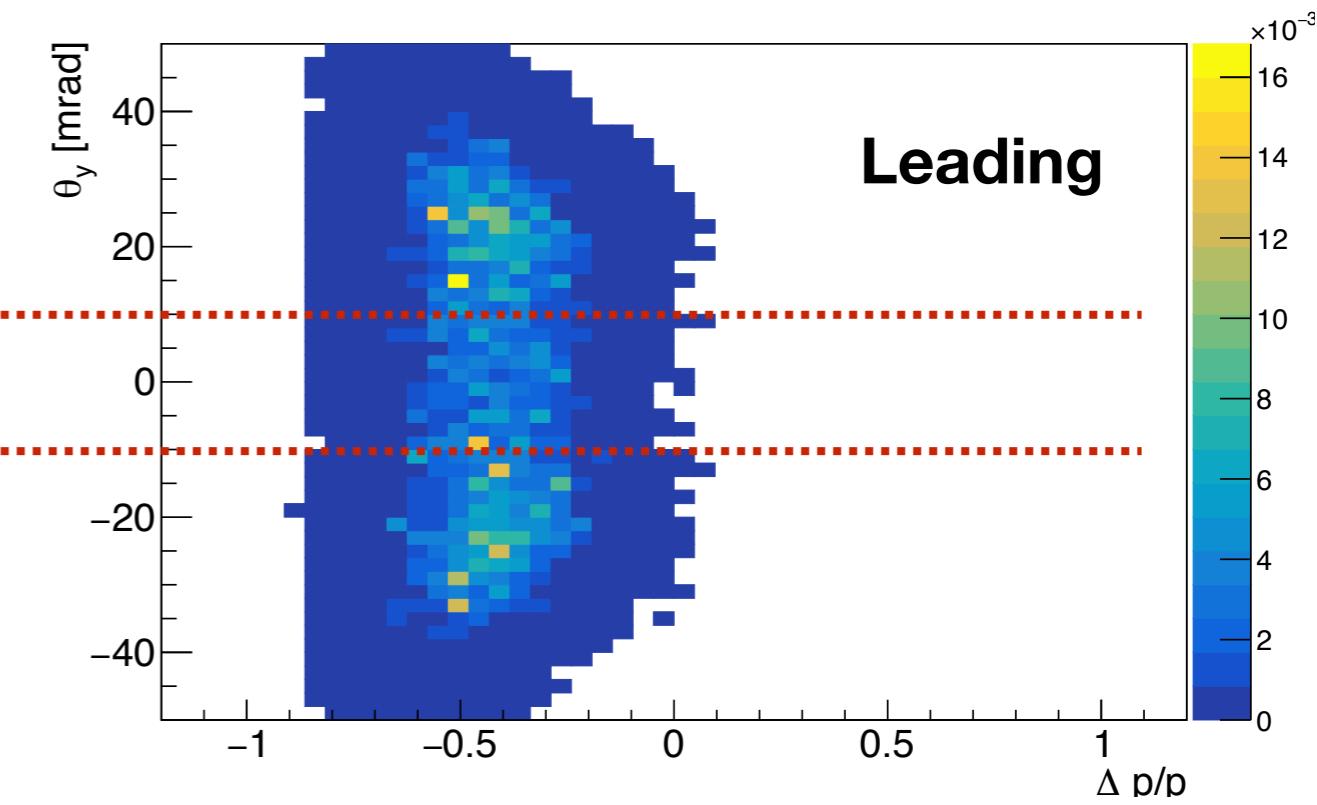

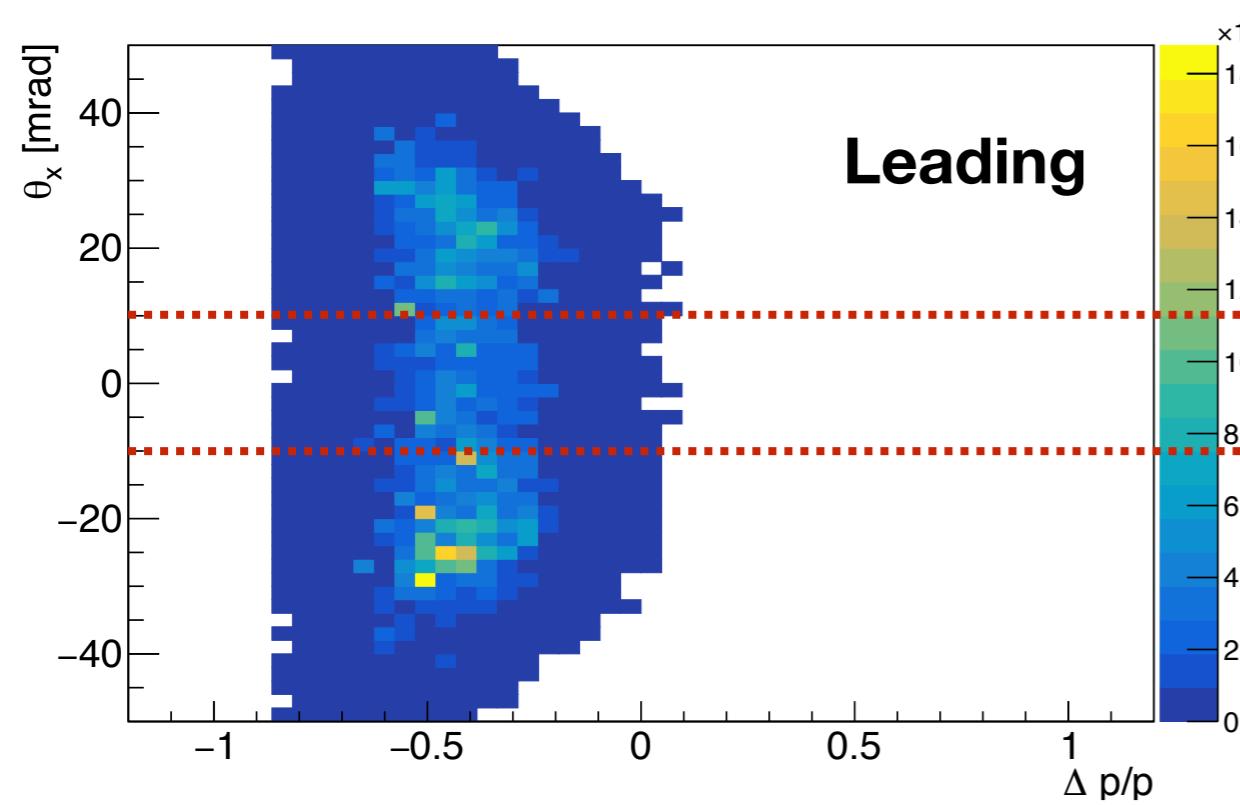

- Continuation of EIC-LDRD project
  - Simulation of DIS event from SRC-EMC model
  - Effects of FSI and intranuclear cascading
  - Detector requirements in forward ion direction

# Back up slides

# QE Simulation Results (no crossing angle)

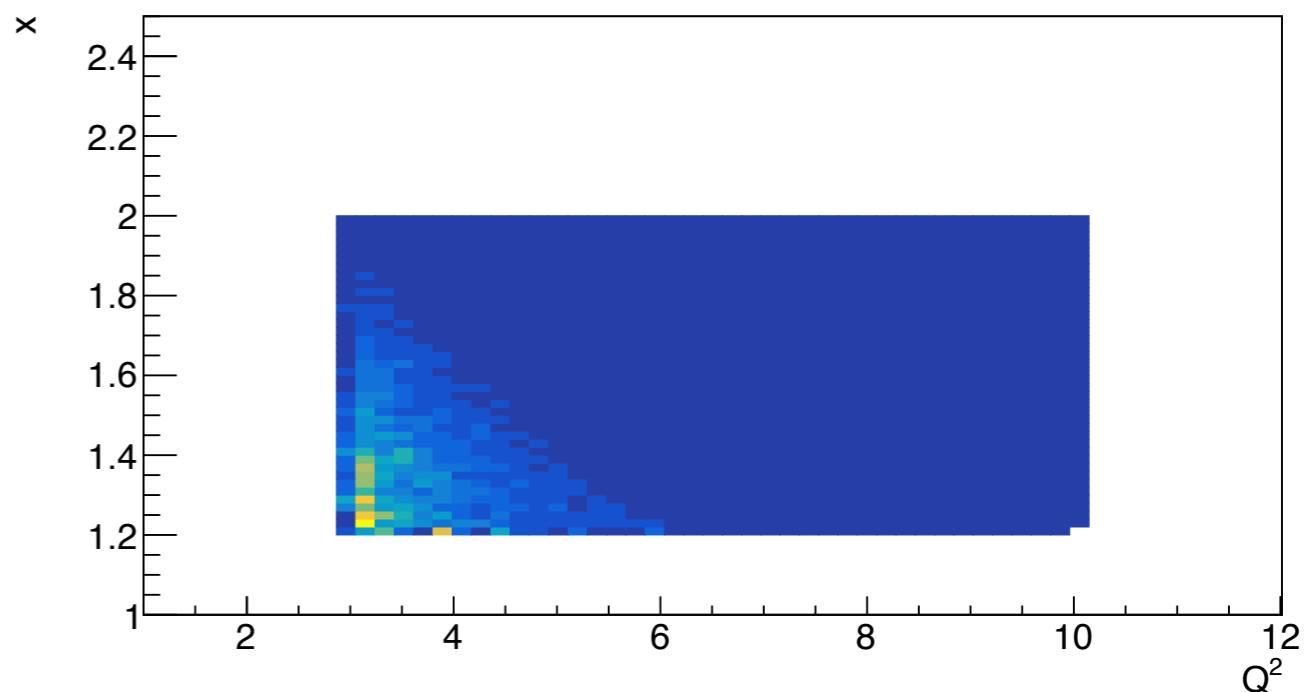

# Quasielastic SRCs - Beam Rigidity

# QE Event Handling Procedure

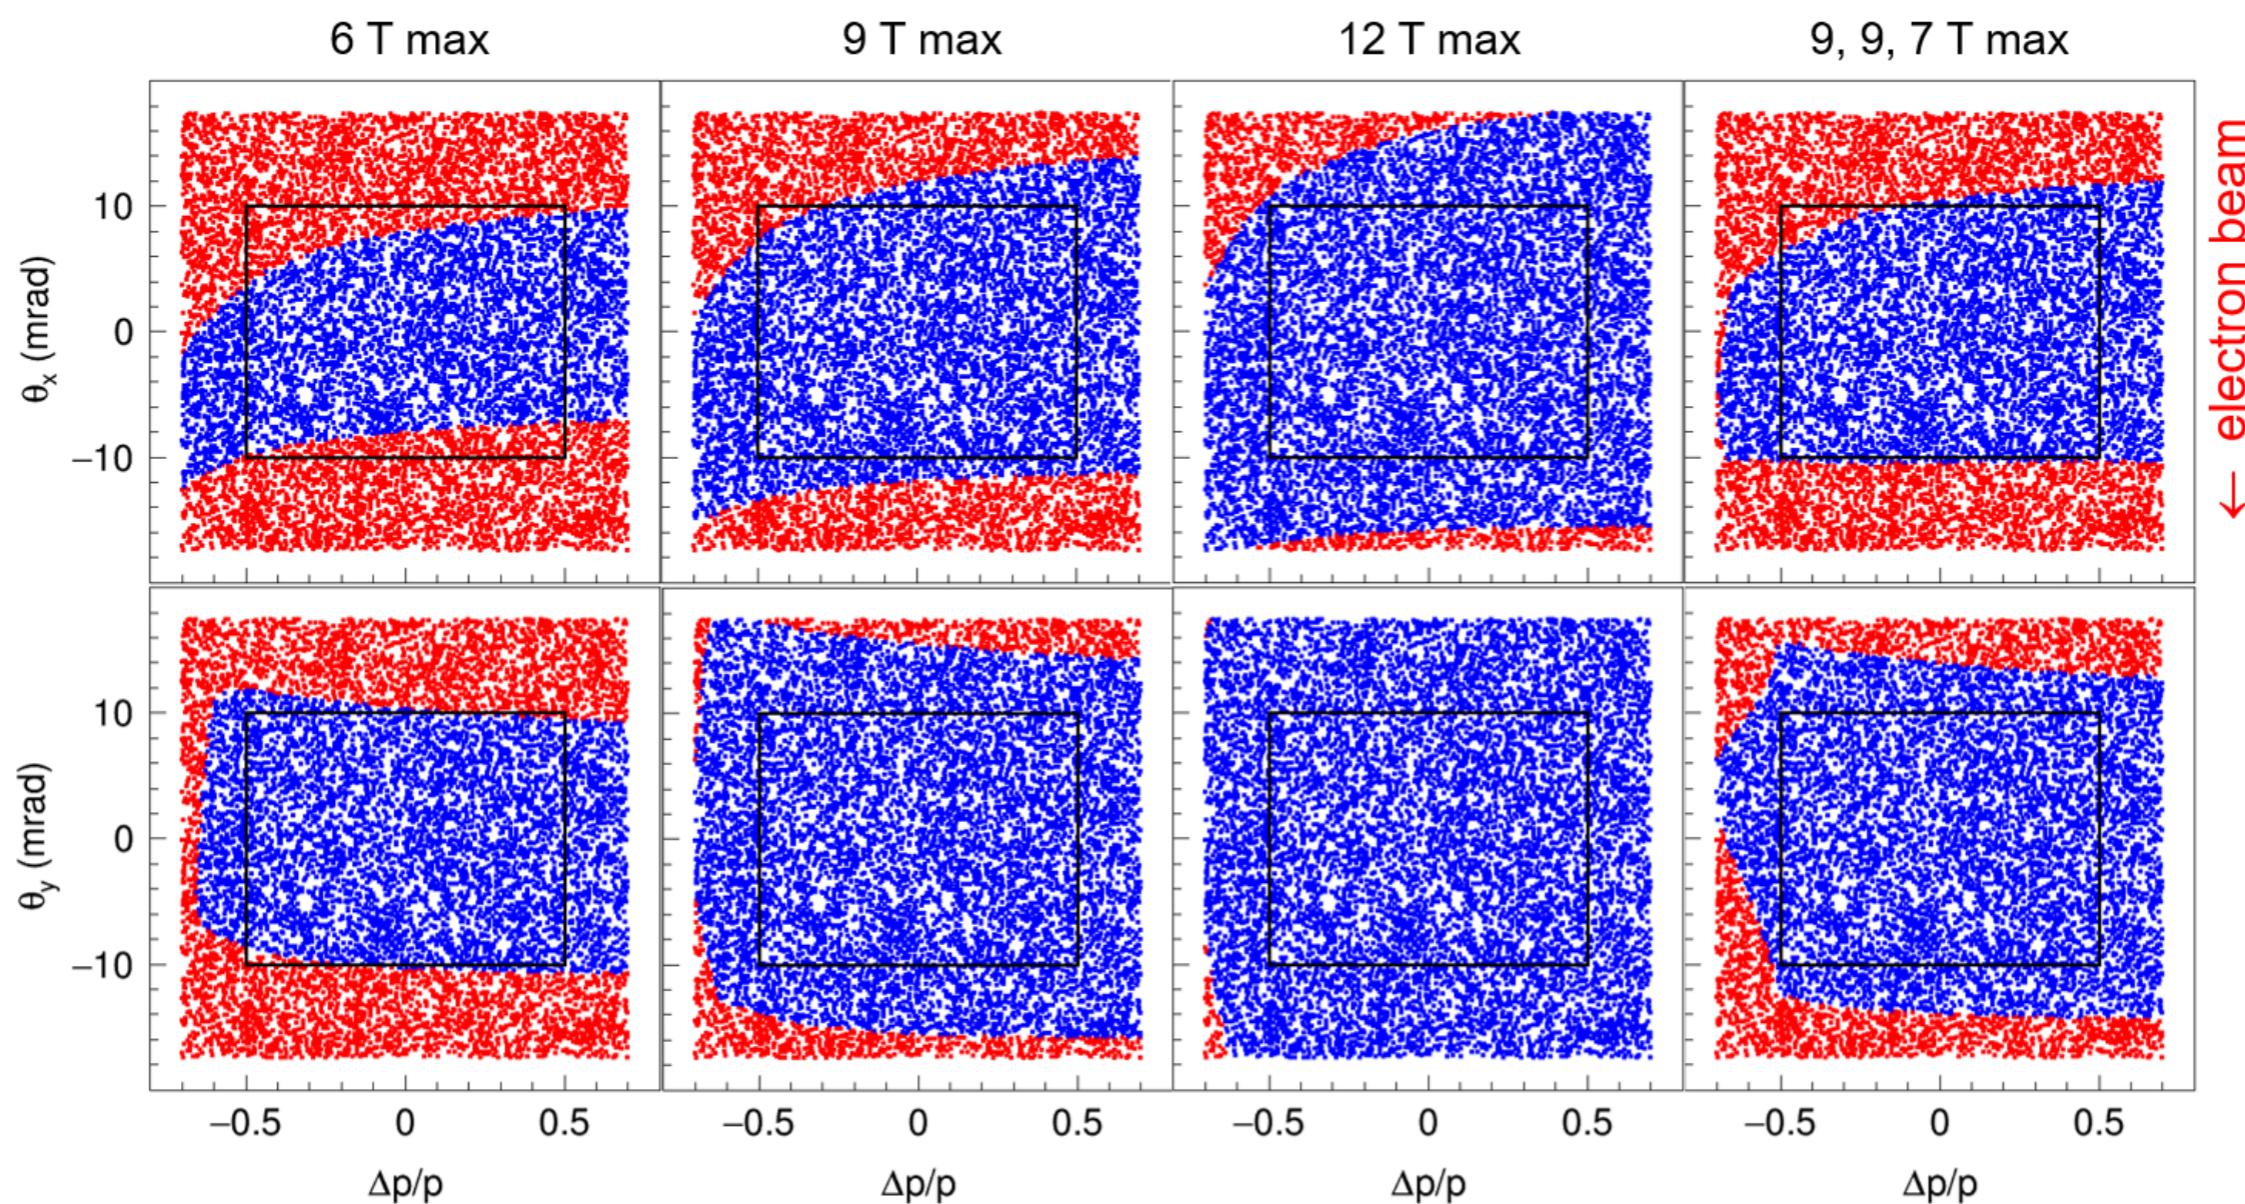

- GCF-QE output of electrons with  $P_e = 537$  GeV on Carbon (fixed target)
- Process through BeAGLE and convert to ROOT-file
- **Fixed target events to collider events**
  - Boost from lab to c.m.s with fixed target kinematics ( $P_e = 537$  GeV)
  - Boost from c.m.s to collider lab with e+C (5x50[40]) beams
- **Add crossing angle via**
  - Boost along x-axis with beta = 0.025
  - Rotate along y-axis by -0.025 mrad

**Check of  $Q^2$  and  $x$  distribution  
( $Q^2 > 3$  and  $x > 1.2$  cut)**

# Far-forward Acceptance Simulation

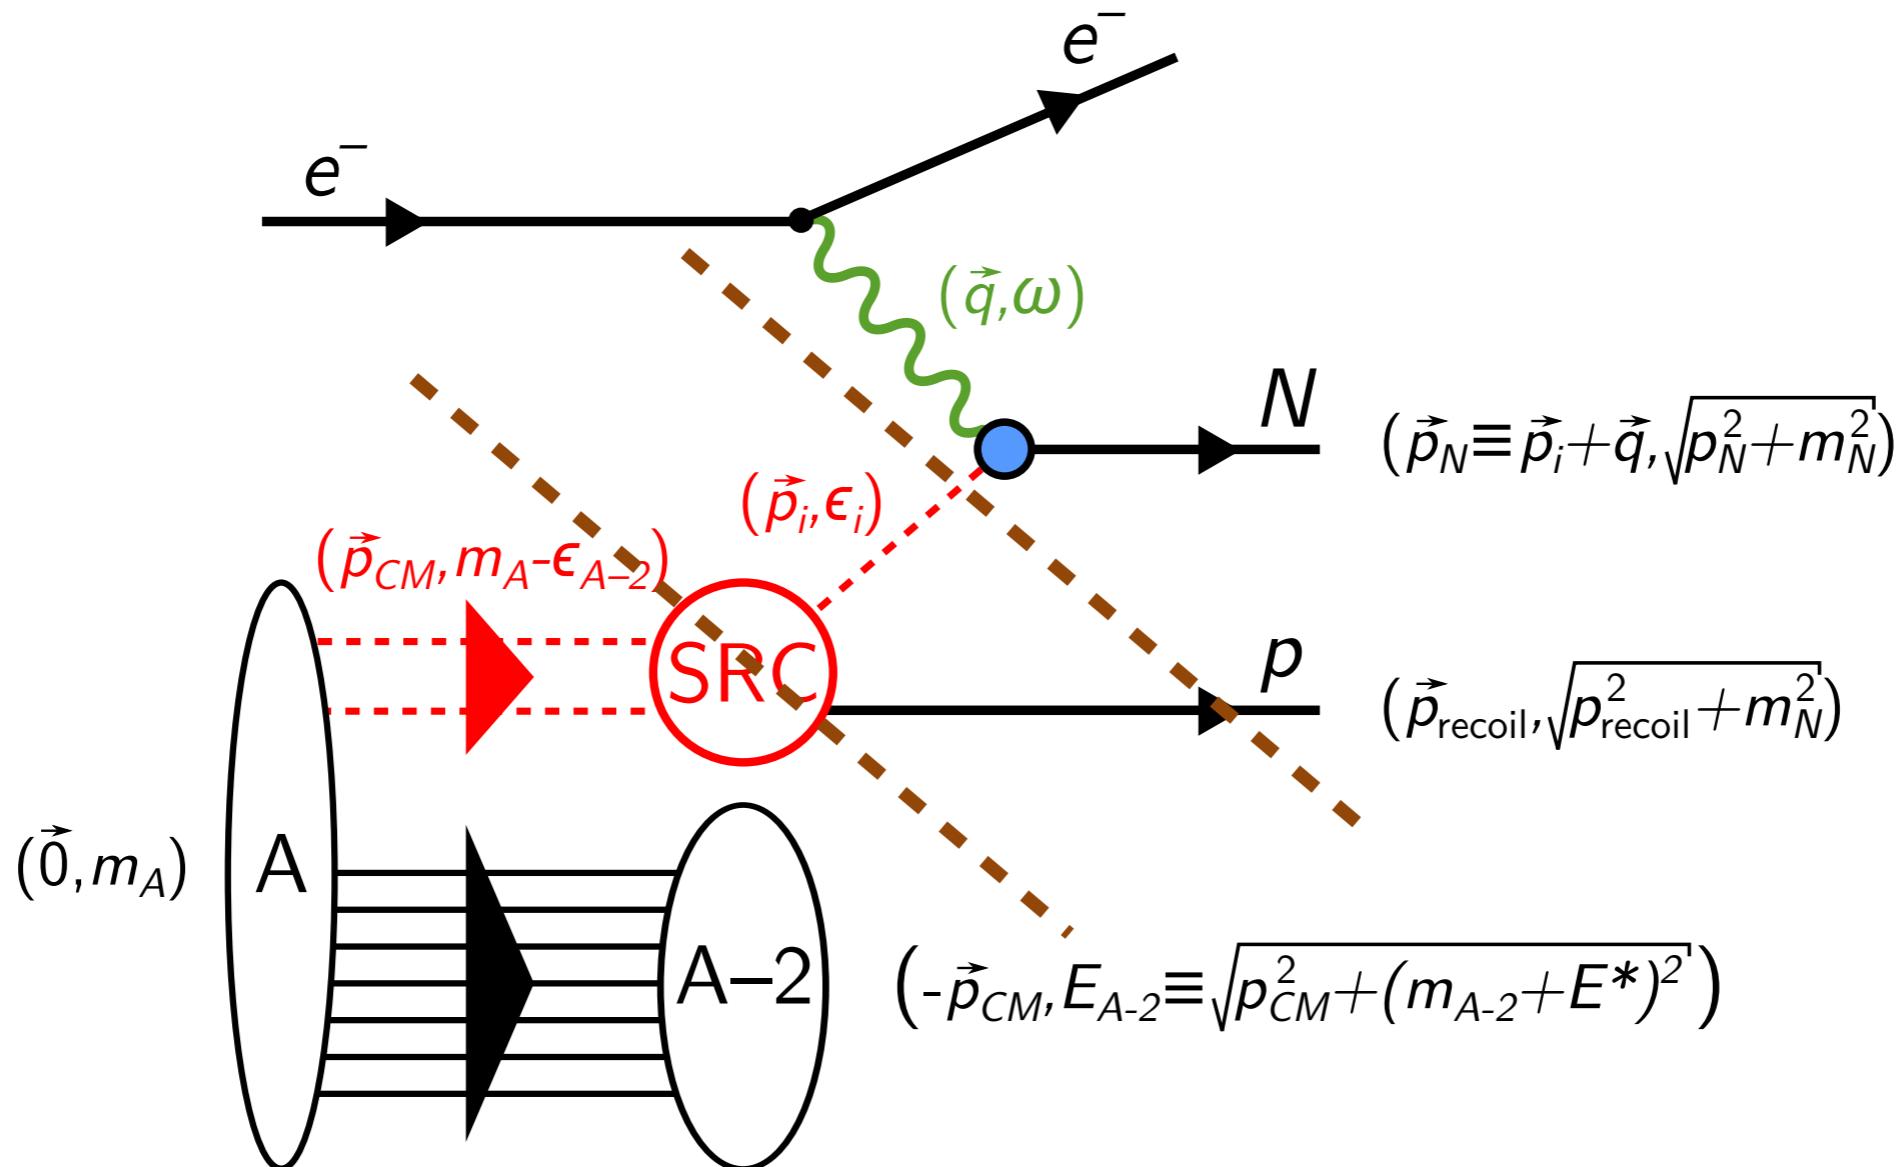

from V. Morozov CFNS Summer School 2019

- Uniform particle distribution  $\pm 0.7$  in  $\Delta p/p$
- Accepted particles are in blue

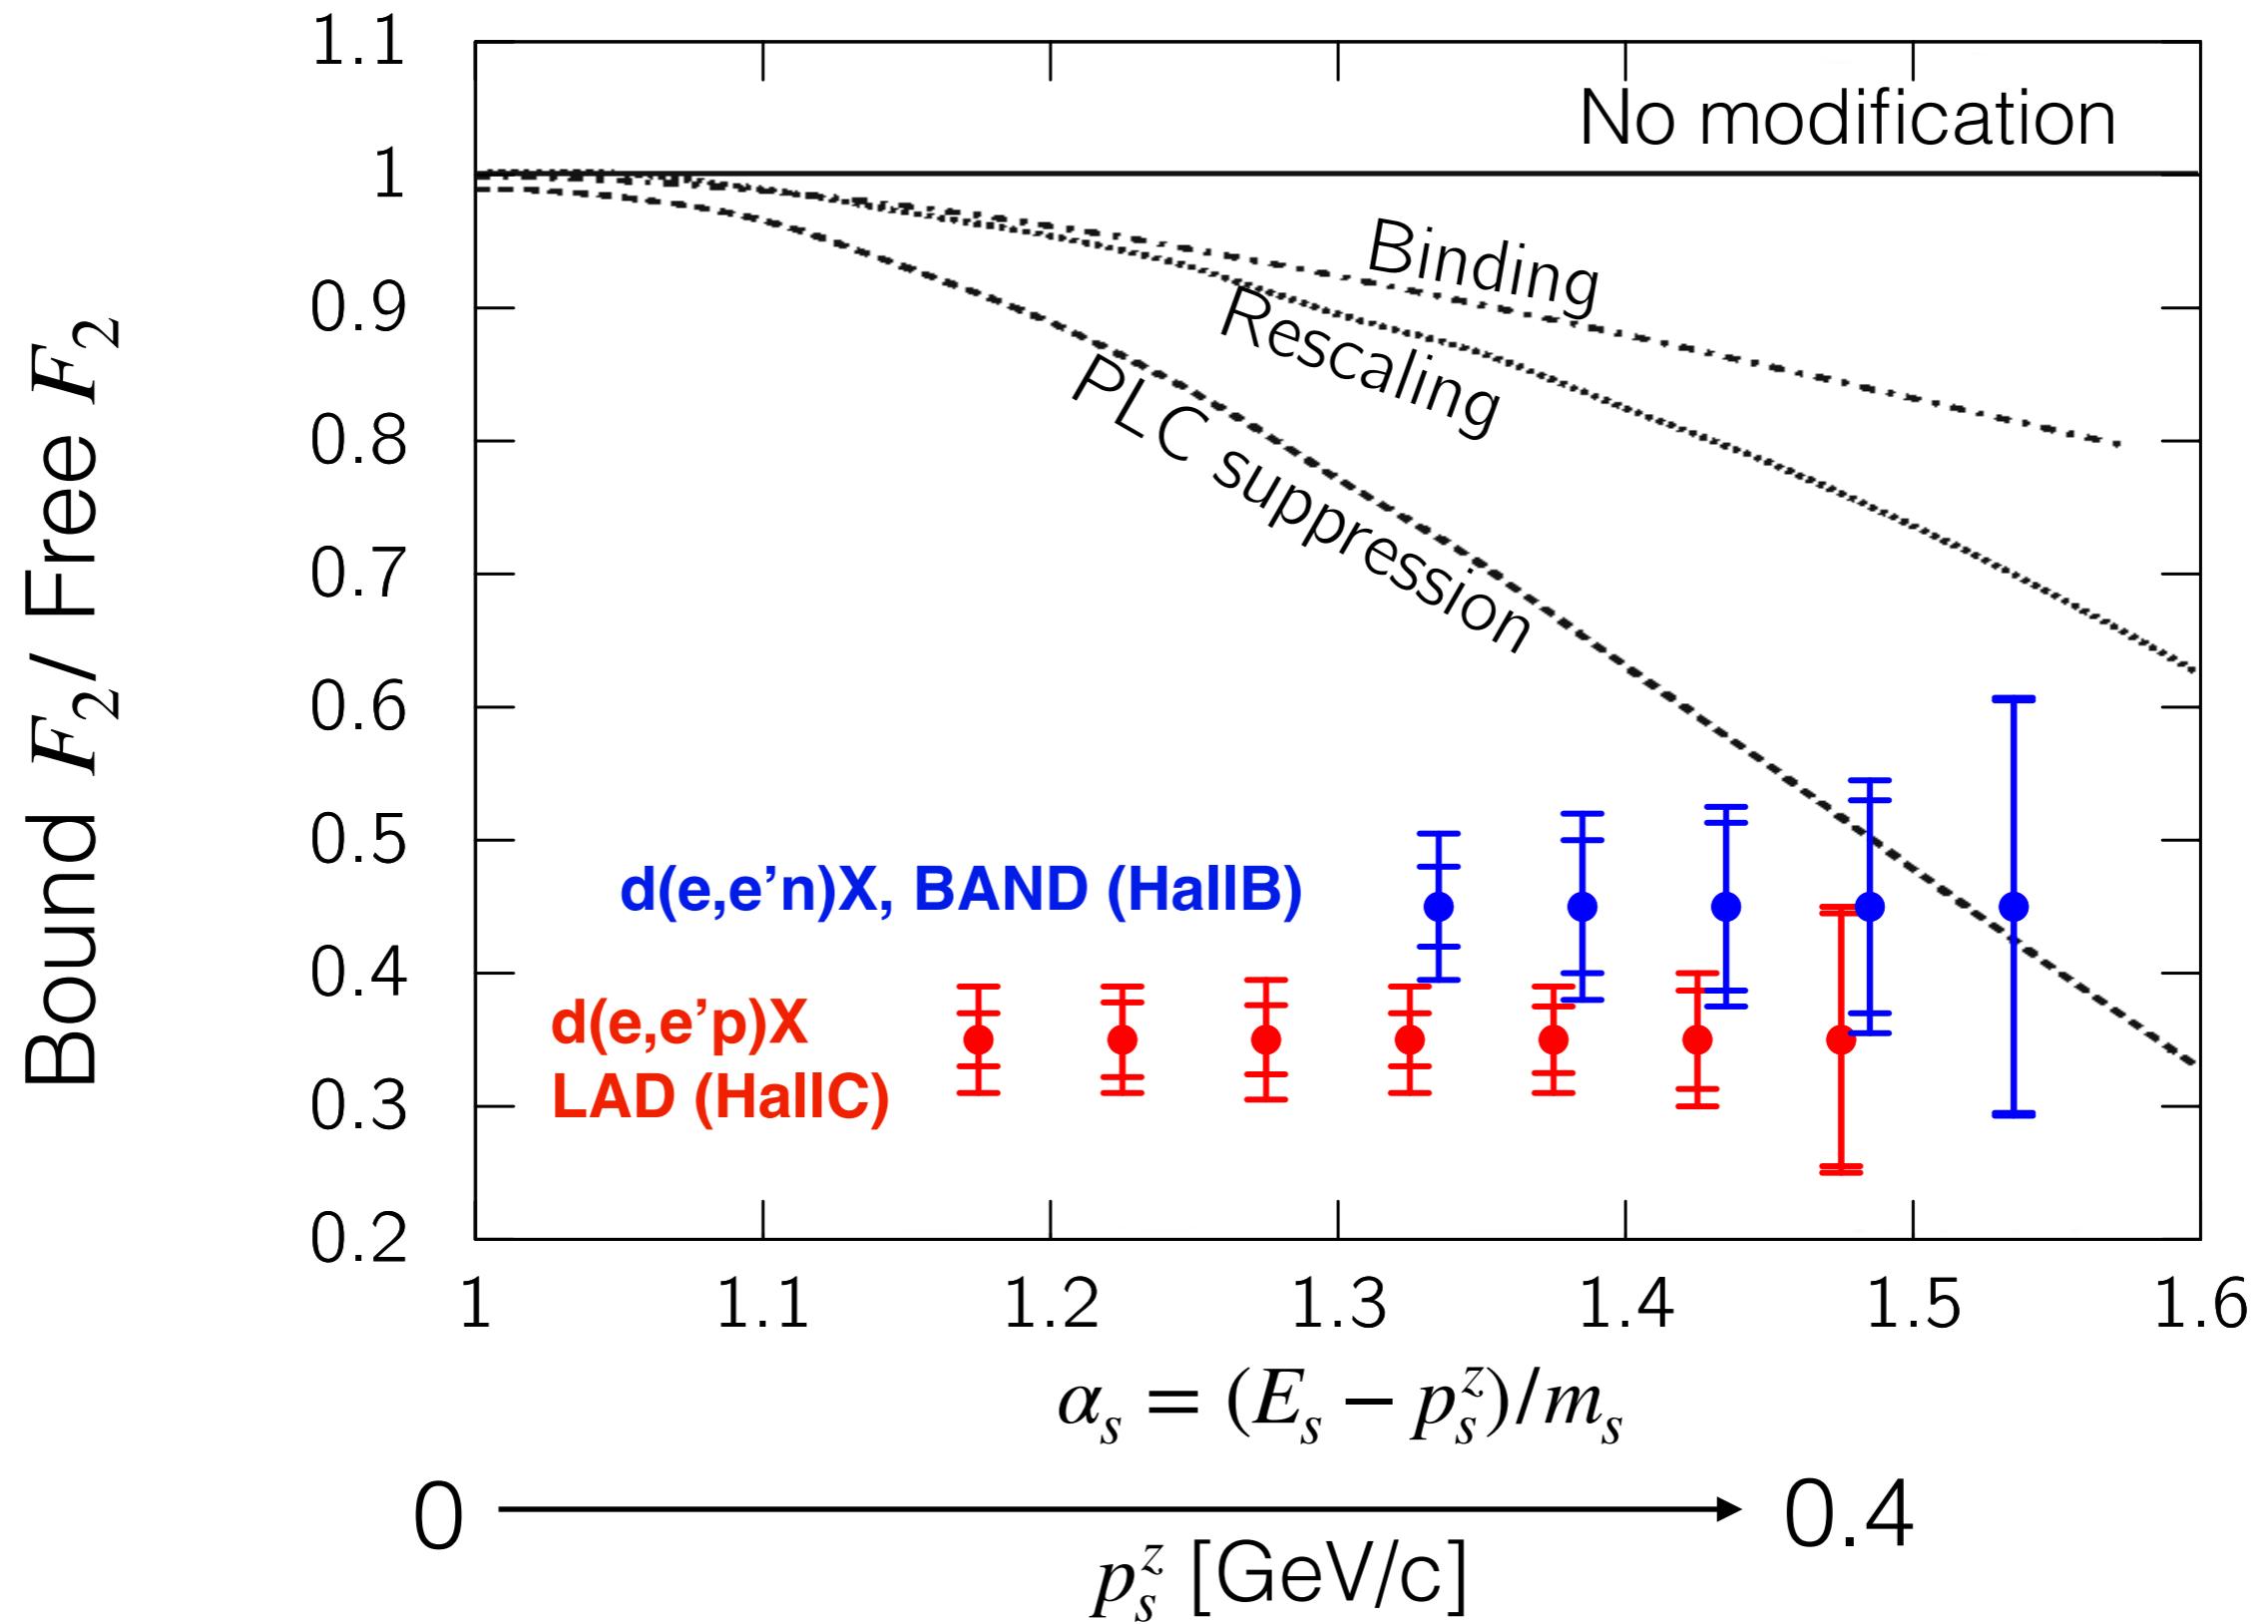

# GCF-QE Diagram

## Fully Plane-Wave Reaction

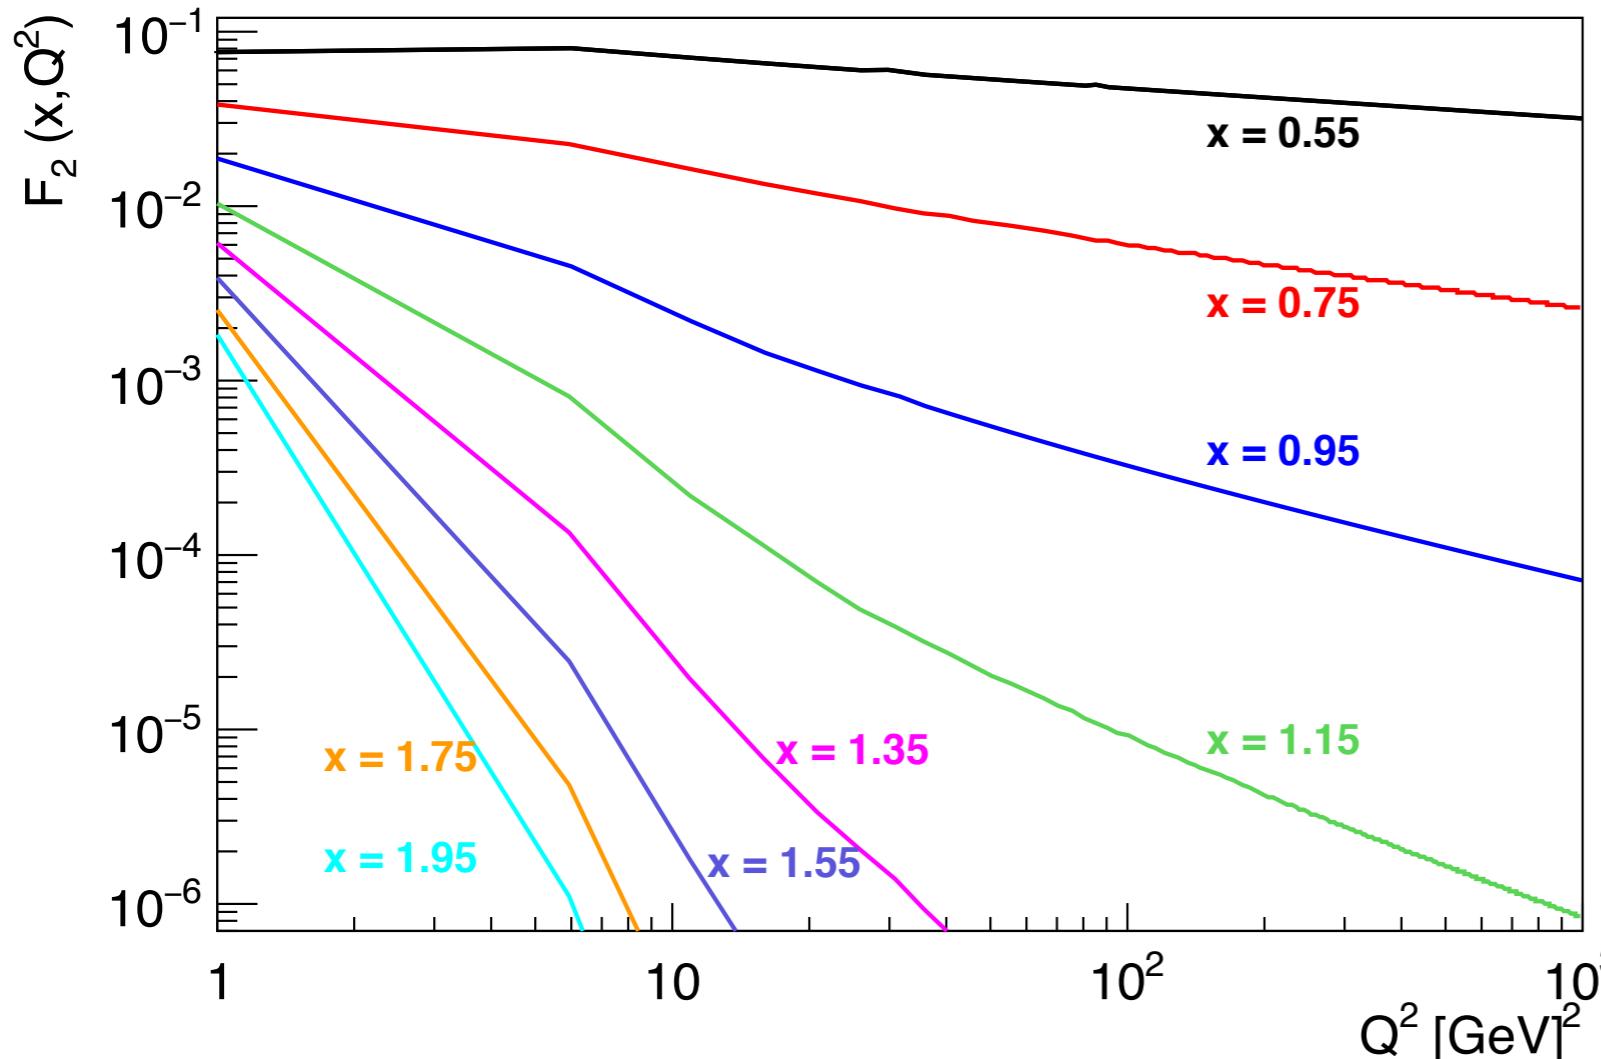

**Scale separation:**  $p_{cm} \ll p_{rel} \ll q$

# DIS Recoil Tagging $d(e,e'N)X$ - Expected Results

# DIS Rate Estimates from $F_2$ Parametrization

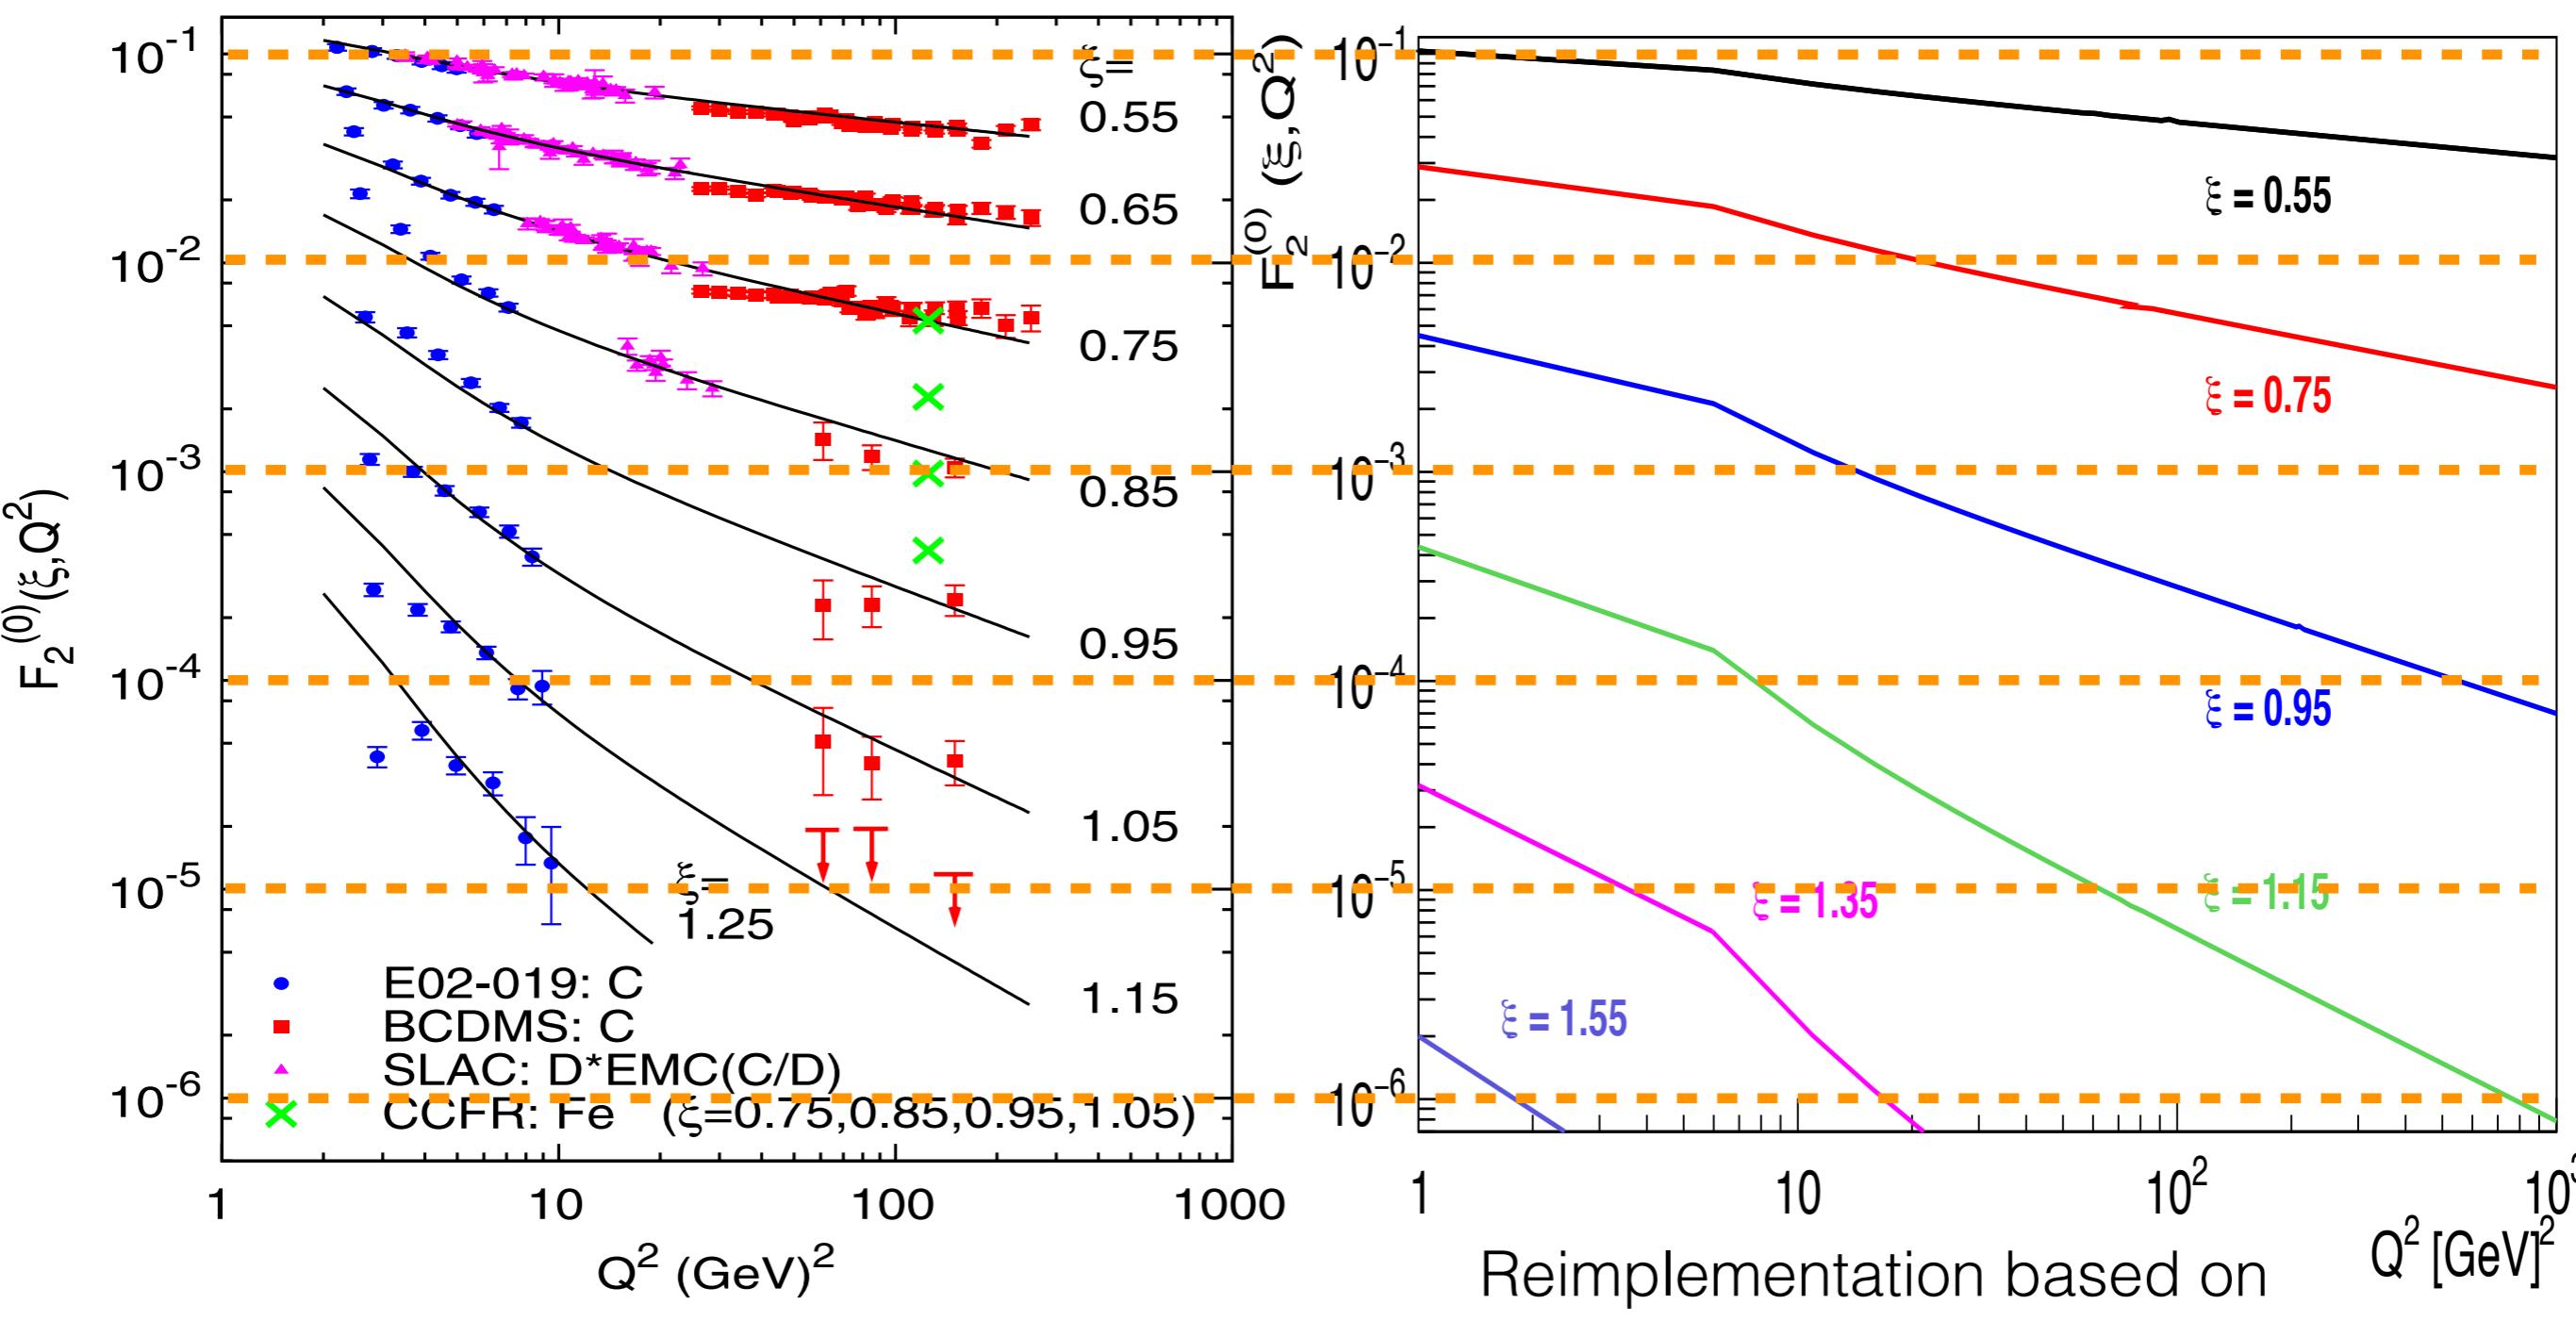

- Measuring EMC effect at high  $Q^2$  easy —> high rate
- SRC ( $x > 1$ ) at high  $Q^2$  challenging but non zero rate

$F_2(x, Q^2)$  based on super-fast quark yield parametrization,  
N. Fomin PRL 105, 212502 (2010)

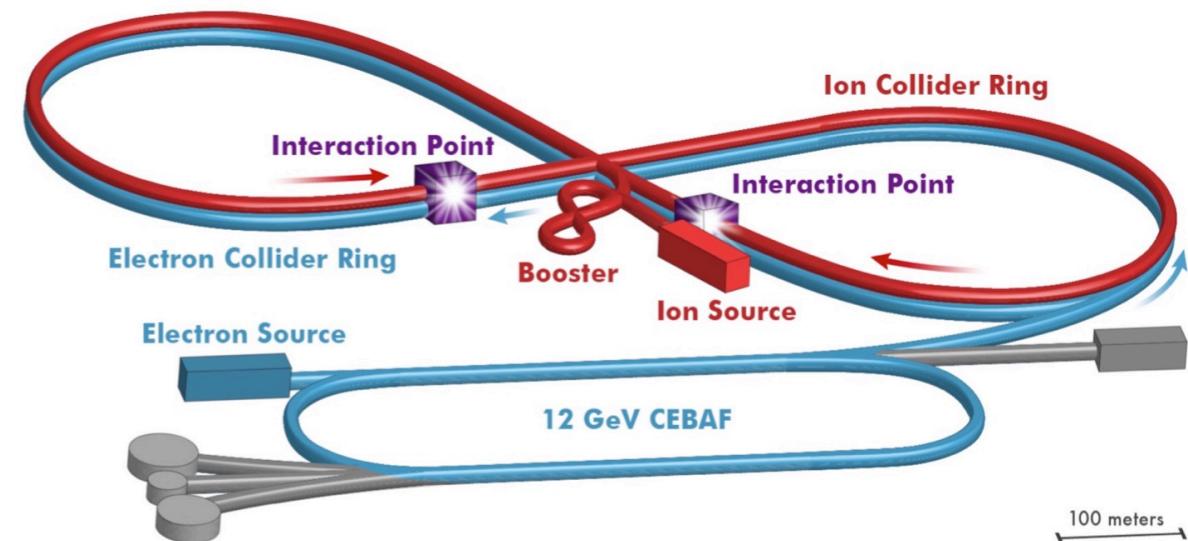

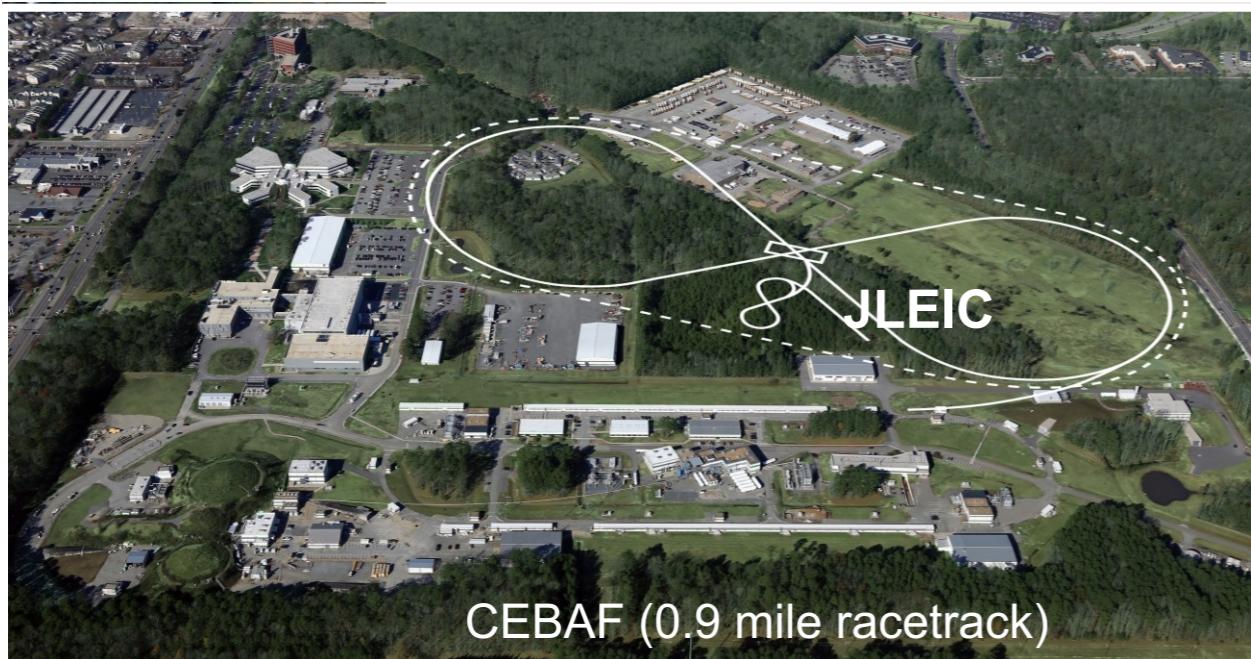

alternative model: J. Freese et al. Phys. Rev. D 99, 114019

# $F_2$ from N. Fomin Paper and Reimplementation

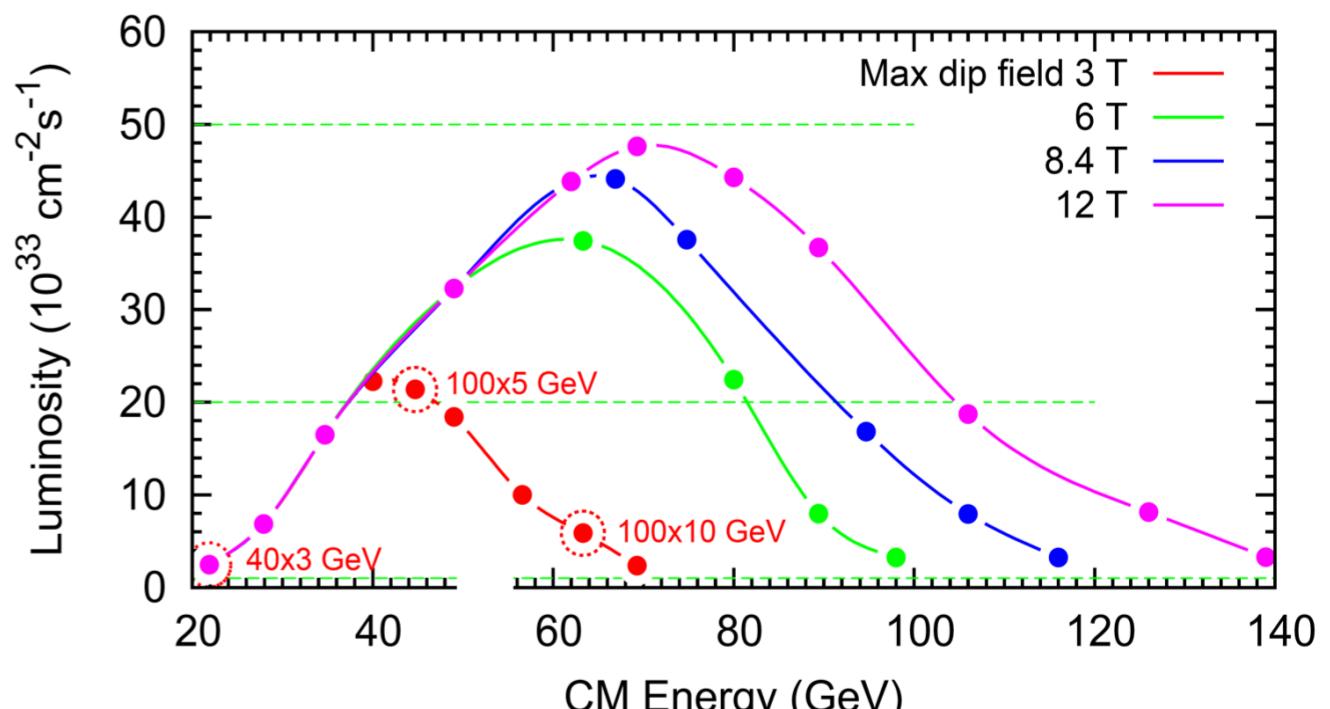

N. Fomin PRL 105, 212502 (2010)

# (JL)EIC Overview

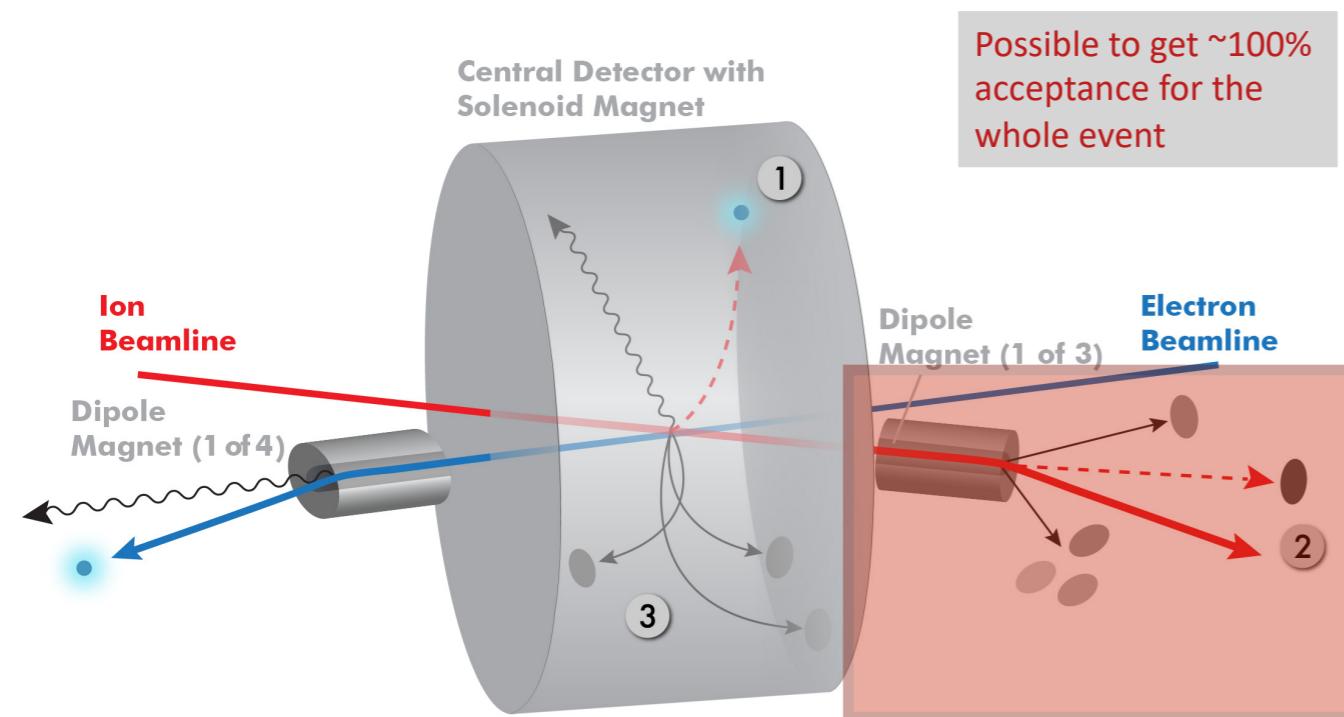

- Figure 8 shape design
- Luminosity  $10^{33} - 10^{34} \text{ cm}^{-2} \text{ s}^{-1}$  (1000x HERA)
- 12 GeV e<sup>-</sup> 5GeV (lumi max) on 200 GeV p

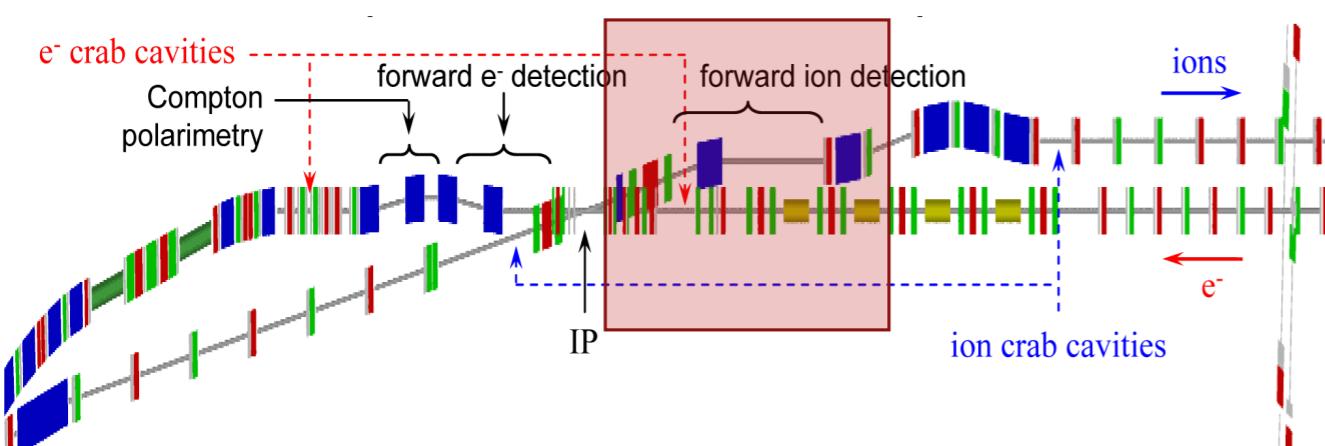

from M. Diefenthaler HUGS talk 2019

# (JL)EIC Ion Detection

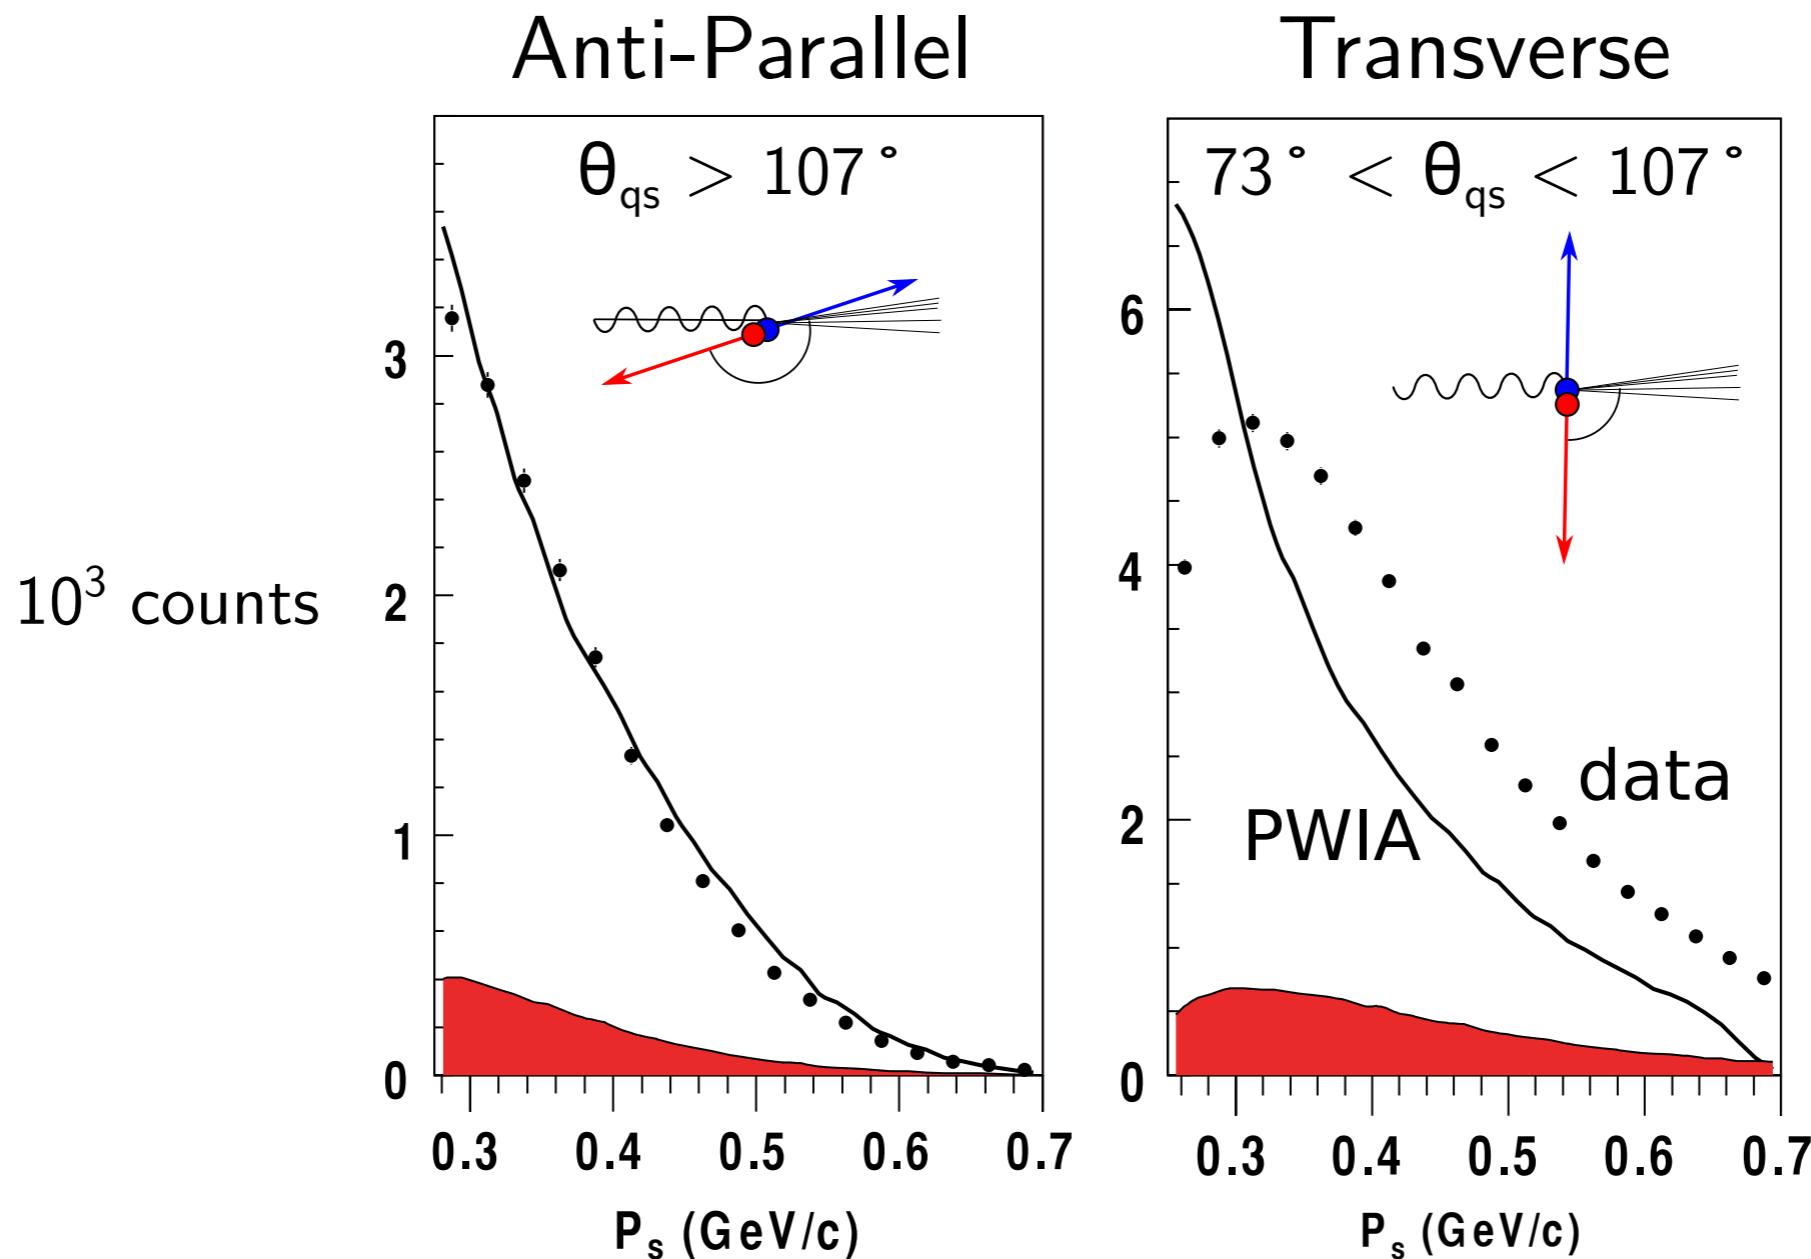

- Forward detection of recoil baryons and target fragments
- Detection demanding
  - Need good resolutions
  - Particles down to  $p_T = 0 \text{ GeV}/c$
  - Neutral detection
  - Ion PID
- Detectors
  - Roman pots
  - Zero degree calorimeter
  - Tracking detectors

# FSI in Tagged DIS

DEEPS showed little FSI at back angles.
